I have a question about interference, I have an new Yaesu FT-100 I have
installed it in my 4x4, upon tuning & testing the SWR of the antennas (I
have 2 on the truck)I came across a major problem. My stereo speakers give
off ENORMOUS feedback making the radio un-useable !!!!!

I 2 Antennas @ 1.5:1 (HF) & 1.1:1 (VHF), the problem is my stereo speakers
in the offroader almost explode when I key the microphone. Is there any
explanations for this???? I have checked the radio and the antennas with
various
different equipment in case mine was faulty, but the radio seems to be the
most
perfect installation I have ever seen...

Interesting!

I would say that removing the diode *would* add the SF function (variable offset function) except that I think that the SF radio was released significantly after the original AH-50. In fact, the manual states "The most frequently asked for improvement was variable offsets..." Anyway- give it a shot, I added a diode and nothing happened. I'd presume removing it wouldnt do anything either.

Do you also have the line of four 2-conductor solder pads? They are just to the right of the contacts for the F (function) and light keys. In fact they share some of the same PCB traces. I've bridged all of them and nothing seems to have happened...

Let me know
Thanks!

A point, I think, everyone has failed to note here is the purpose of the communications. If Matthew is looking for any type of business communications, he needs to use business band or CB (class A on 450 MHz thru a repeater would work great). If he only want to keep in touch with his friend, ham radio is great, providing they both have licenses.

Tom

To all:

   I have a RS DX390, a HamComm interface, and HamComm3.1. I can now get the
parameters of a signal, the shift spacing, the centering of frequency/tuning
and get output on the computer screen.
```

I don't get understandable words though. This signal goes on for at least
an hour.

I have tried normal and reverse keying. I have tried varying the speed. I
have even tried to
vary the mode of the program to something other than RTTY BAudot. No joy.

What am I doing wrong, or is this a business with a scrambler on the
signal?

Sounds like grounding to me.

Make sure you have a short thick braid strap bonding the body of the
FT-100 (mounting screws) to the body of the vehicle.

Do the same ting with the base of your antennas and I reckon all will be sweet.

Any HF radio in a mobile shack needs to be well grounded.

First, follow Alek suggestion.

Next, sounds (forgive the pun) like choke/bypass cap time.

I have an FT-100 in my Jeep and the factory stereo works fine when I
transmit. I'd say it's the installation. Maybe improperly shielded equipment
or a poor ground.
Home stereo's are subject to this from nearby transmitters (house next
door) all the time and it's almost always the stereo that's the problem.
I'd try ferrite chokes on all leads and short solid ground connections to
start.
Sounds like a tough problem, good luck.
Steve AI7W
 (BTW you know that its illegal to transmit music over the ham bands, even
in the background).

If the Stereo is an after-market installation, I'd try putting some ferrite toroid chokes on the speaker leads... as close to the stereo as possible,
If you're using an audio amp, the problem may be a lot tuffer to solve.. you could try putting toroids at the amp speaker leads as well.

If you use an audio amp, try turning it off... Problem still there? Try putting chokes on the Stereo's output leads and possibly a choke/filter on the DC line feeding it.. If the problem is only with Audio amp on... put chokes on amp audio input leads and possibly the DC line (close to amp) Try again, problem still there? Try adding chokes to amp output leads as well.
Try again.. Problem still there?.... I give up :-)

There's nothing on 10130 kHz at the moment.

Perhaps it was encrypted. Perhaps it wasn't an ITA2 signal.

```
Try 10100.8 DDK9 Hamburg Meteo. ITA2 425 Hz shift.  50 bauds.
    11039   DDH9      ----------- ditto ------------
    14467.3 DDH8      ----------- ditto ------------
     7646   DDK2      ----------- ditto ------------
     5483   DDH2      ----------- ditto ------------
```

If these don't produce text, then there's something wrong with your interface.

One hint...you may to reset the CPU whan you rejumper the radio...if it is
like the AH100..you have to put a jumper across the battery contacts
overnight.
Take the battery OFF first, of course!

It's quite possible, that unless you do the above, the jumpers will be
ignored..the CPU probably only looks at them upon a CPU reset.

Yes I know about the music thing but I use the stereo to hear the radio, I
have a connection from the radio to the imput so I get world wide Hams in
Surround sound....

Hello Curtis,

I tried last night around 9:15PM EST

10.130Mhz 50Baud 838Hz Rev could have been RBX73 Tashkent Metro
a WX (weather) station from Russia. However, I think not because that station runs 425Hz shift. This probably was the USN, they use to hold down this frequency a number of years ago from Cutler, ME. The clue is the 850Hz shift -- this is always
encrypted so you will print garble!!!!

Well thanks a lot all I have located the problem, it seems the Amplfier was
no correctly insulated, It took nearly an hour to find the amp, but once I
did I removed the rear speakers ans voila!!! I am back on the air again..

Once again thanks to all..

Hello!

Yeah- when I did the AH-100 mod, I tried to get it to work right away
and it didn't. I was dissapointed but I left a alligator clip jumper on
the terminals overnight and the next day it worked...

In the manual for the AH50 they actually state that a microprocessor
reset (in case of a lock-up) can be achieved my momentarily shorting
the batt terminals ('with a coin' they say:)

I tried this after doing the 'mods' and still nothing happened...

Still looking for AH50 mod info if anyone has it :(

Thanks folks..Wouldn't you know I would find Military/Government stations
first time out. (grumpy). I found one of the WX stations later. I can
usually set up stuff right the first time, but, this time I thought I was
going crazy.

Not a bad idea. I tried it and liked the sound, but hated the loose wiring
from the 'cassette adapter'

I put Code30 to work on this one today.

The station on 10130 kHz is a Russian civil station (probably
railways). There are lots of these about. Some run at 41.5
bauds and very occasionally you will find one of its 36.5
baud relatives.

It is a synchronous enciphered printer running at 50 bps. It
disappears to a night time frequency some time in the (European)
afternoon.

As it runs at 50 bauds and sounds superficially like a normal
50-baud ITA2 transmission, you can be waste hours trying to
decode the un-decodeable if you don't have software to determine
whether or not it's a synchronous transmission.

In this case, of course, it is seriously un-decodeable.

But I have real 2 meter conversations of lids being gross and profane.

Here are some of the neet subjects talked about.

burning houses
machine guns
kicking ass
pissant punks
rotton radio oficers
needing the malitia to stop a radio war

and it just gets better

```
Come hear them all. You will laugh, and want to share them with all your
 friends as good ham radio protocal.

http://www.pittnet.com/claude/hamradio/ABufu.zip

Enjoy!!!

I am having some trouble programming the 2800 via my laptop. I think there is a problem recognizing the COM port but I am not sure. The instruction book is not written in great detail to help me figure out the problem. Any help out there from someone experienced in programming the Icom 2800 by computer?

Thanks.

Nobody likes a smart ass...

I only do it because the speaker quality of the FT-100 isnt
the best when driving through city traffic. It is not a good
idea to use all your concentration in the radio when you are
driving., So I guess hooking it to the stereo system allows
you to use it station for entertainment while driving.

As to your remark

"quote" And you call yourself a HAM, HA! "unquote"

Dont start a fight, this is not the place, if you have nothing
constructive to say keep your damn mouth shut.....

Regards
Damien D Keffyn

Damien,

Have you met the famous Fractenna of rec.radio.amateur.antenna?

I think he uses mono headphones, but has perfected a way to get the surround effects of entire crowd of people listening to voices using minimal external electronics. The only thing you'd need to watch out for is an occasional shock if you use his method, unless isolation works.

Some famous author, I think it was Steven King or Dean Koontz, was
taken by him and actually wrote him into one of his books.

Welcome to ham radio-set your watch back 40 years
How I view DX.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?

12. See now the future of ham radio.

Use of foul language? The guy was an AH and I said so, that was the extent of my "foul language."
What you are mad at is that I refused to talk to you on AOL IM because you consistantly had nothing to say that would interest anyone and you constantly TALKED about getting a license but never did a thing to get one even though you are one of the most intelligent teens I have met. In other words you talk the talk but do not walk the walk. I was also kicked off being "anti-ham." Yes I should remember if you do not walk the company line there is censorship. However I do recall a certain amount of agreement from you and you even requested I be readmitted to that group. You will make the perfect ham, talking out of both sides of your mouth.

Welcome to ham radio-set your watch back 40 years
How I view DX.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.

4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

```

Got an old Electra Bearcat Scanner with a Bent ^ tenna?
Well, today's your lucky day. We're running a special on
Bearcat Telescoping Antennas, just to get you to eyeball
our cool mini VHF pocket scanner. So here's the deal:

1. Come to our website: www.electracorp.com
2. See Electra's TigerScan. Hmm, why didn't we use springs before?
>>Maybe you'd like to have your own second generation 'Little Tiger'!
3. Leave us an email, ordering up to 10 antennas per customer.
4. We'll sell you what we have for $3.50 each (that's right, three-fitty)
considerably less than the price of a new antenna, if you can find one!!!
(Please add $1.00 for shipping; and 5% sales tax if in Indiana)
5. Upon receipt of check or money order, we'll send your Electra
Bearcat Antennas out same day via U.S. mail in a padded shipper.
6. You've got reception, we've got space, plus 3 1/2 bucks :) WIN-WIN!

Notes: We also have crystals, AC power cords & manuals, but NO REPAIRS!
(See Gerry at G&G). This offer ends when we run out of stock (my guess is a couple of weeks).
Sorry, fresh out of portable/rubber duck style antennas (BC-100, Four-Six, and so on).

Best regards,

Dave Lovell - W9DAG
Pres. - Electra Corporation - 'The Originators of Scanning Monitors'
P.S. - WE NEED TIGER SCAN DEALERS! If interested, please advise.

One of my references says that might be Tashkent Meteo out of Uzbekistan (sp?) and it's quite possible that things aren't in English. Just a thought. I'll fire up my decoder when I log off and see how I do on it.

I've already posted the information on this one:
```

It's a 50-baud synchronous enciphered printer. Russian. Probably
railways.

It's seriously un-decodeable.

Is there a new and improved version of the Icom T7H computer programmer?
Something that is has a Windows appearance instead of DOS is what I am
hoping to find.

Thanks.

Is there a way to print out the ICF files from the Icom 2100 programmer????

Thanks.

Randall Buxton

Product Announcement
For immediate release
March 20, 2000

Timewave Acquires ANC-4 Noise Canceller from JPS.

Timewave Technology Inc. has acquired the rights to the ANC-4 Antenna Noise Canceller from JPS Communications, Inc. The ANC-4 uses null-steering technology to eliminate noise from power lines, electric motors, and home electronic devices. The versatile ANC-4 can null strong interfering signals and peak weak signals by combining signals from two antennas.

Inserted before the front end of a receiver or transceiver, the ANC-4 is an excellent complement to Timewave's industry-leading DSP-599zx post-detection signal processor. The ANC-4 can wipe out S-9 line noise while the DSP-599zx can reduce random noise, eliminate heterodynes and slice adjacent channel QRM.

The manufacturer's suggested retail price for the ANC-4 is $199.00.

Timewave is beginning production immediately and expects to ship the ANC-4 to dealers by May 10, 2000.

Timewave will service and support ANC-4s that were manufactured by JPS in past years.

Note that the ANC-4 is the only product Timewave acquired from JPS. JPS exited the Amateur Radio market in 1999, but remains actively involved in the commercial and government land mobile and telecommunication markets.

For further information, contact Timewave:

sales@timewave.com

Subject says it all...

I'm looking for older electronic musical equipment, BROKEN OK.
Prefer gear with lots of controls but will consider anything.

Synthesizers, keyboards,
effects racks or pedals
drum machines
sequencers
vocoders
any old patchable modular or analog synth
Roland TB-303 Bassline
TR-808 and TR-909 Rhythm Composers

PLEASE RESPOND PRIVATELY AND INCLUDE PRICE AND CONDITION.

Thanks in advance.

Examples of some of the things I am looking for:
Strider DCS
Steiner-Parker Modular
Jellinghaus Yamaha DX-7 programmer box

Roland CR-78 Compurhythm
Con Brio ADS 100, 200 or 200R
Steiner Synthacon
ARP Sequencer
much more!!

Sent via Deja.com http://www.deja.com/

Hello all:

My Heathkit HW-101 transceiver is having some trouble on the 28.000 to 28.500 band. I suspect the crystal or the crystal holder. The received band is intermittent. I once took the crystal out and looked at the holder. It seems as if the last owner "wallowed out" the insert where the crystal leg goes. I tried to fill in the gap by using AL foil on the leg and inserting it into the holder. It worked for a short time then nothing again.

Any suggestions?

Curtis Scholl
cscholl@izzy.net.

Most likely the crystal holder was 'wallowed out' from constant changing with another crystal---TO GET ON THE CB BAND BREAKER BREAKER BROKE C'MON SKIPLAND... best just to replace the holder. Those HC-6U holders are fairly easy to find. Maybe, with the use of a small screwdrive you can squeeze the prongs together to get a tighter grip on the pins. Maybe you can desolder one end of the pin and straighten it in order to push it through the holder to squeeze it together with pliers---then replace.

Sincerely

Not to belittle CW or what you said, but I use common CW abbreviations
while carrying on foreign PACTOR QSOs. They can be a useful part
of any digital mode QSO, including CW.

I disagree.  It is the COMPREHENSION that counts.  If you can read it,
you can send it, and this is an award for people who UNDERSTAND the
code, not just those who can memorize a "song."

Odd that you should say that.

I have had many QSOs with overseas hams who could not speak a word of English nor I speak a word of Russian, French, German, or whatever. BUT, we could carry on a satisfactory conversation about an admittedly limited but useful set of topics using common CW abbreviations, etc.

It is a mistake to confuse Morse and CW - they are not the same by any means.

I guess you have never heard of Q-Signals, eh?

With those I have managed to have reasonable QSOs with ops who I could
never have communicated with at all by voice.

And therefore since you claim we can have the same QSOs in cw that you
can with PACTOR why not just save all the extra BS involved with PACTOR
and just do cw and chuck the PACTOR mode, huh Cecil?

You just cannot seem to wrap your pitiful little mind around the concept
that not everyone prostrates themselves before the Great God PACTOR as
you do.

Personally I can just email someone in almost any language and just use
one of many conversion programs. Far from perfect but they generally
get the basic concepts across.

So why bother with PACTOR huh Cecil?

Why would such be needed?  The concept is if you can receive 20wpm you
understand the code and can send.

Just being able to send is no measure of if you can receive.

And there should be no waivers.

> > so long as you allowed the keying means they needed to utilize,

> I disagree.  It is the COMPREHENSION that counts.

If you can receive, and are not a braindead moron, you can comprehend.

> If you can read it,
> you can send it, and this is an award for people who UNDERSTAND the
> code, not just those who can memorize a "song."

Of course, but receiving a QSO at 20 wpm when you do not know what the
QSO is is a comprehension test, not a memorizing of a song.

Quite. I have yet to see DX stations send QSLs unsolicited from a US ham with a W6 call, Cecil.

A WR7 on the other hand... well, I have received massive numbers of SASEs from DX stations AND US hams.

Considering there are just about 25 other hams with the prefix, and some of those are not particularly active.

And then again, my 2x1 is superior to yours, Cecil, because I am an Extra and you are not.

Deal with it.

And no matter what you do, Cecil, I was an Extra 12 yrs ago... you will not, barring a time machine, be able to alter that no matter what you do.

> > And you have not disproven or discredited a single thing I have said,

> Why should I try to do that, Neal?

I agree... it is difficult to disprove the truth.

> I'm just having fun.

If you consider being proven conclusively to be a lying, lazy, idiotic delusional fool, then more power to you, Cecil.

> Have you proved that you are not a rapist yet?

Where do I have any burden to do so, Cecil? I have not claimed I am not

one... you are the one claiming I am, by implication if nothing else.
The burden of proof is on you.

However the statement was that you are an idiot for claiming that you
cannot prove A negative... not ANY or ALL negatives.

And since I have proven several negatives you are clearly and
conclusively disproven.

> > And poor little Cecil just cannot seem to deal with it... poor baby.
>
> Strange thing for you to say to someone who already had four
> years of graduate engineering experience when you were still
> $hitting all over yourself.

Irrelevant, Cecil. For all your 'graduate engineering experience' you
certainly did not seem to do much with it. How do you explain that I
have been an Extra for 12 yrs and you are... well, you are Cecil... need
I say more?

Because most of my friends are on PACTOR, Neal. Guys like you won't talk
to me on CW. I use a straight key at 10wpm. Real CW operators use straight
keys. What? You use a ***DIGITAL*** electronic keyer? You use the electronic

logic system that you absolutely hate? Go figure.

> You just cannot seem to wrap your pitiful little mind around the concept
> that not everyone prostrates themselves before the Great God PACTOR as

I do not advocate using threat of force from the feds to promote PACTOR,
Neal, but that is exactly what you do for Morse code. I believe in live
and let live. You obviously do not. What kind of balls does it take to
try to control my choice of modes? If you want to do CW, then do it.
I will do whatever modes I choose to do or none at all, thank you.

> Personally I can just email someone in almost any language and just use

> So why bother with PACTOR huh Cecil?

When the big emergency happens, telephone lines are down, and internet
connections are severed, I'll be able to contact PACTOR II stations that
I can't even hear on CW and transfer more information without an error
than I ever could on CW.

Sorry, Cecil, but I am not whining. I have nothing to whine about. I already have my Extra. You do not.

I am merely exercising my first amendment guaranteed free speech rights to state my opposition to the actions of the government toadies and my reasons for such opposition.

You are not required to like what I say or to agree with what I say, Cecil.

I am not forcing you to do anything.

So what, again, I ask... is your problem, Cecil?

Projecting? You should know all about that now, shouldn't you Cecil?

ROTFLU!

Yeah, I suppose you can get name and location type of equipment and the size of your antenna, but is that all hams want to talk about, the size of your antenna?

You can have your mode, Neal. Just don't try to force it on all hams.

You do your mode and I will do mine. What is wrong with live and let live?

> I use an iambic paddle.

Which requires that same hated digital logic that exists in TNCs.

> Where is anyone having a gun held to their head to use CW, Cecil?

Not to use it, Neal, to learn it. The feds use the threat of force to compel all HF hams to learn Morse code.

> Deal with it, Cecil.

Already did, Neal, ten years before you were born.

> Are you going to claim that such a situation or circumstance is
> absolutely impossible, Cecil?

Nope, just so improbable that I would be better off storing food and water than owning a CW-only rig.

I use an iambic paddle. I do not use a TNC, Cecil. I can also use a
straight key but send better with the iambic paddle.

And as soon as you are elected god of the universe I will give a rat's
red rump about what you think.

> > You just cannot seem to wrap your pitiful little mind around the

Where is anyone having a gun held to their head to use CW, Cecil?

Your statements get more and more moronic and delusional every day.

> I believe in live and let live.

They hell you do, Cecil. You are clearly lying again.

> You obviously do not.

Sure I do... I do not force you to use CW any more than anyone forces me
to use PACTOR. However I had to learn how to effectively use PACTOR to
get my license, and you should have to learn how to use CW to get yours.
No one is forcing you or I to use those modes.

And learning how to use CW effectively requires the code proficiency
test. Just like learning how to use PACTOR effectively required the
part of the theory test.

Deal with it, Cecil.

> What kind of balls does it take to try to control my choice of modes?

My what a delusional paranoid you are proving yourself to be, Cecil.
You seem to think there are jackbooted gun toting CW Police around every
corner, under every rock and in every tree out there just to force YOU,
Cecil, to use CW.

You know, Cecil, you really should take your medications...

> If you want to do CW, then do it.

> I will do whatever modes I choose to do or none at all, thank you.

I have never mandated or tried to mandate anything else, Cecil. Where
have I ever forced you to utilize CW in your daily operations?

However you should have the skill to USE it, just like I should have the
skill to USE PACTOR. (Though once it is set up a trained CHIMP could
use PACTOR... one of the Appliance Operator modes).

> 73, Cecil, W6RCA   http://www.mindspring.com/~w6rca

Assuming, of course, the computers are all running, the TNCs are all
functioning, the higher priced and more complex rigs are having no
problems at all, etc etc etc.

And in the situation where you do not have each and every piece
necessary for your pactor spiderweb of technology and only have the
means of communicating via CW or not at all, you will remain utterly
useless.

As usual.

Are you going to claim that such a situation or circumstance is
absolutely impossibly, Cecil?

Are you really *that* moronic?

Sent via Deja.com http://www.deja.com/
Before you buy.

The following items are for sale or trade (or both) make reasonable offers.
mailto:mcguyver@bv.net

FS Model # P110 Motorola UHF transceiver with battery, antenna and standard charger.
Model#P44QLC20A2AA

Works fine, asking $175 shipped

FS: 486/75 Color T2115CS Laptop w/ W95, 8MB ram, 14.4 PCMCIA modem w/o cables , 350MB HD, 3.5 floppy and 2 PCMCIA ports. Works great, keyboard trackpoint (w/o rubber), plugs into wall directly, battery is dead, AC directly into machine works
fine. Sell $300 w/case OBO

I have a used, but great condition Fluke Model 87 III True RMS DMM for sale, with fluke leds and yellow protector, works fine, photo upon request, selling to get a different DMM

Asking $175 shipped

1 pc
DONGAN Multi-former Model LJH-90A
120VAC input (primary)
10,000V/60Hz output (secondary)
New in Box (photo upon request)
sell $100 obo plus shipping

EF johnson VHF handi talkie, w/o antenna connector. Unit will work
fine when charged and antenna connector added. With 9.6V 1Ah battery
Sell $150

2- Sony C-Mount CCTV Lenses for ccd cameras
12.5-75mm zoom with manual aperture. 1 with Lens cap included. Both
have sun shield
$125/each

1- CANON C-Mount CCTV Lenses for ccd cameras
12.5-75mm zoom with manual aperture. Both units have sun shields
$125

Advanced Modular Solutions Model # MS/16+ Portable 486dx50 computer.
Runs on 12VDC adapter (included), standard
PS2 keyboard and mouse. Runs a standard SVGA monitor also has 16MB
memory, Built in TCP/IP module via RG
connector on back. 1.2GB HD, very small unit, a bit bigger than
cigarette carton. O/S loaded are os/2 and W95...Great buy
for portable computer. 2 DB9 com ports and 1 DB25 port. No floppy.
Photo upon request
$200

Mobilcomm - Voice Organizer Pager. Model 9601 Voice recognition pager
stores numbers and appointments and IS A
PAGER ALSO ! Recognizes your voice to pull up telephone numbers or
dates. Runs on 3 AAA batteries, complete
instructions included. Paid well over $200 for it orig. Sell for $50

Misc

100+ pieces LM317t Positive adjustable voltage regulators, TO220 size,
NEW and unused make offers

Vicor VI-J52-IZ
DC-DC converter 150VDC input (@35W) output 15VDC @25 W
$25

Some guys think that mast size is directly proportional to . . .

However, I somehow doubt that too many ladies would be impressed if they
found out that a guy's "mast" diameter was 1/40 of its length.

The concept is not always the fact.

> Just being able to send is no measure of if you can receive.

Agreed. Just being able to receive is also not proof of comprehension.

```

Yep.  Which is an entirely different animal than the canned FCC exams.
There aren't that many tests, and there aren't that many questions on
the test.  When you recognize which test you have, then it is simply a
matter or remembering what is ON that test.

This was a popular method of passing the Extra not too long ago.

You can only understand Morse if the sender and you speak the same language. If I send you unaccented French in Morse and you don't speak French you're not going to understand it.

I thought, that's where the Q Codes / abbreviations
and the like, come into the game.?????

Looking to purchase a new/used scanner. I have a limit of five hundred dollars to spend. Interested in trunk tracking capability. What is the "best" available, considering features and reliability versus price? Not tryin' to start a flame war, just wanna get the most for my money. By the way I have a Uniden Bearcat BC140 that has low audio output even when the volume is fully clockwise - have checked the speaker - works great with other audio source. Any fixes would be greatly appreciated. Please respond via e-mail outside of the rec.radio.scanner newsgroup, I don't frequent the others on a regular basis.

Ham radio and internet are entirely different functions. Exactly how
are you going to reach 1000 hams at the same time world-wide on ham
radio? If you were making that exact statement over ham radio right
now, odds are infinitesimal that I would hear you.

Didn't say if you wanbted Handheld or Desktop. The choices are
somewhat limited. Fro a Handheld Trunker you can look at het
Uniden 245 XLT or the Radio Shack Pro-92
In a desk top right now it is limited to the Radio Shack
Pro-2052.
 It is roumored that Uniden is coming out wity a repalcement for
their BC 895XLT so you might want to wait a while if interested
in a Teble top scanner.

It was never a situation that the C.W. requirement kept out all the dregs. One has to listen to any portion of the band to hear the trash that is on it. Rather, it was a lessening of the overall requirements, especially the written exam, that allowed the bands to become what they are today.

One simply has to look at "every" period of deregulation to literally be able to plot a graph showing the downgrading of amateur radio. C.W. simply kept out of the hobby those too lazy to learn it; the fact that there are some extra class schmucks simply points to the fact that C.W. is that easy to learn!

But when you look at "when" the written test become easier, MUCH easier and then, only adding insult to injury, became multiple choice, again, you could draw an almost straight line downwards from then to where the hobby/service is today.

Most hams don't even know how to read a resistor, let alone have a proper understanding of Ohm's law. And now, even lessening the C.W. requirements to only 5 wpm for all classes of licensees!.....does nothing but rings the death knell to such a beautiful way to communicate.

I hope enough hams come together and write, petition, whatever, the fcc and the arrl in order to reverse both the deregulation of C.W. and the theory needed/required.

Phil

KA2IWR

P.S. Those not wishing to do "any" studying for advancement, simply wait.

Probably in a few years you'll have full access to any frequency you want by the further deregulation that is obviously going to happen, sooner or later.

Hi folks:

I live in a double wide mobile home. There are 4 metal beams around 60 feet long under the floors. I have some questions regarding the effect of the long beams.

1. If I wanted to place a long dipole at the peak of the roof running lengthwise, how would it affect that dipole? If I grounded the 4 foundation beams to earth would it help or hurt?

2. If I placed a wire beam with the "boom" lengthwise and elements perpendicular to the beams, how would that affect the performance?

I suspect that the 4 beams would create an elevated "ground plane" or counterpoise and would do nothing that the earth would not do for dipoles not resonant to the beams. I would think that the beams underneath (being as long as a 40 meter antenna) would resonate and direct the RF in an UPwards pattern. This is if it is not grounded?

OK guys and gals, what are your opinions??

Is your home made of metal? Like metal sides, metal top, metal ends....if so, it seems to me that the metal skin would be the counterpoise for veticals and a hinderance for dipoles.

Can't you guys take this whine somewhere else? It doesn't
belong on r.r.a.e. You can't change it, the FCC is following
the lead of most other countries who did the same thing
several years ago. Go ahead with any email flames, I know
and use the code often on eme and aurora where it is
neccessary but it is no longer needed as an entrance filter
(listen to 75m some Fri night, talk about trash!)

What I would be happier doing is using these beams as ground radials for an
80 meter vertical.

If you can get access to an MFJ-259B antenna analyzer or equivalent, you can experiment to your
heart's content.

I have a new 2000 Expedition and the electrical noise generated by the engine etc. is terrible. Operating mobile is impossible. I had a 1997 Expedition and the noise was fine. The noise comes in through the antenna, not through the dc leads. I have had it in to the dealer and they played with it for a while and they will do so again next week. I wonder if anyone else has had a similar problem with a 2000 Expedition?? Ford changed the engine etc. on the 2000 model so it is different from the 1997 that I had. I also have a 1998 F-250 Ford and it is fine.

The students of Jefferson Middle School in Rochester, NY are looking for scheds in a limited operating window. Friday, February 18, 8:00 AM to 11:00 AM Eastern time only (1300-1600z).

We will be tuning the Round up frequencies of:

7225-7255
14,250-14,280
21,300-21,330
28,550-28,580
28,350-28,400

Look for W2SKY. Schedules are welcome by emailing W2SKY, Peter at w2sky@arrl.net
Operation is sponsored by the RARA Radio Coaches
http://www.ggw.org/rara/radiocoach.htm

Peter Fournia

Hi folks. I am an electronic musician searching for some old electronic music making equipment, in any condition, BROKEN OK.

Synthesizers, keyboards, drum machines, tone modules, effects racks or pedals, vocoders, sequencers and especially old modular, patchable or analog synths (modules or complete systems).

Also looking for old literature on this equipment, particularly all Keyboard Magazines pre 1988.

Will consider anything by the following manufacturers:

MOOG, ARP, Roland, Korg, Oberheim, Sequential Circuits, Electrocomp EML, EMS Synthi, VCS3, Buchla, Serge, Paia, Steiner-Parker, Octave-Plateau, Wavemakers, Aries, Digisound, Synton, Yamaha CS and OTHERS.

Please email me privately if you have or know the whereabouts of something I might be interested in. Please be sure to include price, condition and location. Thanks for your time and Happy Valentine's Day!

Examples of items I am looking for:
Roland MC-202 Microcomposer
Moog 16 Channel Vocorder
Roland Jupiter 8
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
Lots of other stuff...

Sent via Deja.com http://www.deja.com/
Before you buy.

Cecil, let me offer the thought that "CW" is actually a superset of Morse. While Morse is a simple - although somewhat unique - alphanumeric symbol encoding system, CW communication involving Morse has over the years evolved into a pseudo language with the syntax, et al that you cite as lacking with Morse alone.

It is entirely possible - and it is done daily worldwide - to communicate effectively over a limited set of topics of mutual interest with amateur stations worldwide whose knowledge of spoken English is anywhere from limited to entirely lacking. This has been especially true with Russian/USSR stations over the years.

The commonality of abbreviations, subject matter, and even the "order" with which topics are discussed or presented all combine to provide a language-enabling mechanism that is actually rather effective, however limited in potential content.

72/73, George
Fairview, TX   30 mi NE Dallas in Collin county

>
> Really? Where are the alphabet and syntax rules for the Morse language? I was under the impression that Mr. Morse spoke English and invented a *coding system* for the English language and it was originally designed to mechanically punch holes in paper tape. If you're not coding the *English* language, how do your fellow American hams ever understand you?
>
> Morse code and Ohm's law are learned exactly the same way. If you use it, you remember it. If you don't use it, you lose it. After 49 years as a ham, I am very practiced in the use of Ohm's law.

Of course, they are technical. This is supposed to be a technical service.
Who cares what mode they use to operate?

Bull.

I know Extras who can't even pull their own call signs out of a string
of 10 otherwise random characters.

I wonder why all this hoopla is taking place on a "computer" based
newsgroup instead of over the bands?

Here, they are automatically "published."

On the bands, they might be sending their message(s) into thin air for
all they know. THAT'S SCARY - to them.

Here's an idea folks --

What about having a "20+ WPM" (ARRL?) certificate or award that could serve to recognize those who believe that recognition of their code speed is crucial to their self-esteem. That way, the technical questions related to licensing can be segregated from the code speed / rite-of-passage debate.

It's a good idea. It should also include SENDING 20WPM using a straight key.

The testing should be done at hamfests, with results posted on a board, so that we can properly recognize those who pass . . .

. . .and those who DON'T. heheheheh

Give us a break! This horse has been beat long enough!

a story comes to mind about a truck driver from the USA
stuck up in Edmonton waiting for a dispatch back to the 48
He was mad as hell to be there; so far from his home; that he was
complaining about everything. This big Cannuk comes over and
says to him "you no like Canada?---then get the f--- out"

If you are so sure its over feel free to do whatever you like with your
ticket and rigs
I, for one, am not quitting.

Let me put it another way, Mr. noname, nocall, likely CBer, Only a
fool would defy an FCC R&O. What is it about, "This R&O is closed.",
that you do not understand? Why don't you go back to 11m?

Thanks Mr. CBer, you have just proven that Morse is a coding system, not
a language.

> > After 49 years as a ham, I am very practiced in the use of Ohm's law.
>
> But clearly not in the use of cw.

CW is my favorite mode. I rarely use any other mode. You lose, Mr. CBer.

We're talking about the coding *SYSTEM*, not the content of the communication.
Please describe how you use CW without memorizing the code/character
translation. Do you develop Morse code from first principles every time
you use it. You seem not to know anything about Morse code. I suspect
a CBer on the troll.

> It is the same as your french teacher telling you not to
> translate/convert but to actually think in the language naturally.

Ah, but nobody thinks in Morse code. You really are a CBer, aren't you?

Alphabet rules? What do you think the [.- = A] are? As for syntax it depends on what other language you are using morse to communicate in.

> I was under the impression that Mr. Morse spoke English and invented a
> *coding system* for the English language and it was originally designed
> to mechanically punch holes in paper tape. If you're not coding the
> *English* language, how do your fellow American hams ever understand
> you?

Irrelevant. It is still a language useable by non enlish speakers to communicate at least the basics of a conversation with enlish speaking hams, and vice versa.

> Morse code and Ohm's law are learned exactly the same way.

BS, Cecil.

> If you
> use it, you remember it. If you don't use it, you lose it.

Actually it is much like riding a bicycle. Once you learn it right you never forget it... you might get rusty from non-use but the rust shakes off fairly quickly.

I guess it is just becoming more and more apparent that Cecil just never learned cw well and arrogantly brandishes his inabilities and the ignorance they create as some kind of perverted 'virtues'.

> After 49 years as a ham, I am very practiced in the use of Ohm's law.

But clearly not in the use of cw.

Then you are unique in the universe, Cecil.

Because since cw is used for COMMUNICATION and part of the definition of COMMUNICATION is the exchange of ideas, I fail to see how one can consider the exchange of ideas between individuals, each exchange being completely different for the most part, to be 'repetition carried out mechanically'... ESPECIALLY 'unthinkingly'.

Maybe you operate morse on the 'infinite number of monkeys at an infinite number of typewriters for an infinite period of time recreating all the works of Shakespeare' model, but I do not think most people do...

and likely your random dits and dahs on the air would legitimately be considered interference under most definitions and result in your losing your license. (not that it would be much of a loss to the hobby apparently... you certainly come across as a 3870 kind of guy...)

> Code gurus tell us to, "Repeat the code over and over until you can do it
> without thinking about it".

It is not 'not thinking about' what is being sent... it is 'not thinking about' the mechanism of the communication.

It is the same as your french teacher telling you not to translate/convert but to actually think in the language naturally.

But clearly Cecil lacks the wit to comprehend ... maybe we should just pity him for his ignorance and mental limitations which he is so clearly demonstrating.... what do you all think?

Lessee... I work emergencies, public service communications, VHF nets,
HF nets, organizing and teaching ham classes, organizing and running
local VE testing, helping at the 7th call area QSL incoming Bureau,
doing interference tracking and control, as well as contesting, DXing,
phone patches, emergency communications into disaster sites, and scoring

the occassional newspaper article for the hobby.

Oh no... I don't do anything to promote or support the hobby, now do I?

I feel I have put enough into this hobby to allow me to stand in defense
of what I believe in, and if you do not like it well I guess that is
just too damn bad, now ain't it?

Hi folks, I am looking for some old electronic musical instruments and related accessories from the 1960's -1990. I prefer instruments with lots of knobs or slider controls but will consider anything. BROKEN OR PARTS OK.

SYNTHESIZERS (eg. Moog, Korg, ARP, Roland, Sequential, Oberheim, etc)
KEYBOARDS
SEQUENCERS (anything with knobs or sliders for each step)
VOCODERS (robot voice effect, keyboard or rack)
MIDI MODULES
EFFECTS PROCESSORS (Mutron, Maestro, tape echos, filters, etc)
ANY OLD PATCHABLE MODULAR OR ANALOG SYNTH

Please email me privately if you have anything youd consider getting rid of
or know someone who might. Be sure to include price, condition and location.
Thanks for your time and have a nice day!

Examples of things I am looking for but definitely NOT limited to:
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
Voyetra Eight polyphonic synthesizer module
Integrated Kyboard Wavemaker 4 or 6
Oscar with or without MIDI
PPG Wave 2.3
Studio Electronix P-Five Pro-5 analog rack module
Morenz-Perkes 1200

and lots of other stuff...

I have not been on 11m since 1974... but surely you are well acquianted
with it recently, Cecil.

Moi?  CBer?  And why, pray tell, would a CBer be staunchly defending ham
radio quality against the lowclass whiners such as yourself?

But you just cannot deal with reality, and are clearly losing it, as
proven by this incoherent rant, Cecil.
```

And btw... what is it about April 15, 2000 and linear time that you just can't seem to grok?

Closed? One word. Reconsideration. Nuff said.

And since you and your pathetic ilk did not take the FCC as immutable gospel before, why should I now?

Try and wrap your little pea brain around that one, if you can.

ROTFLU!

You need to get your fact right! NO one will lose bands.. The advanced class will stay the same and so will the novice. They will continued to be renewed

Why should I try to do that, Neal? I'm just having fun. Have you
proved that you are not a rapist yet?

> And poor little Cecil just cannot seem to deal with it... poor baby.

Strange thing for you to say to someone who already had four
years of graduate engineering experience when you were still
$hitting all over yourself.

Sorry, nitwit, but I proved no such thing, and neither have you. There are also equivalencies in other languages to most words in English... so I guess french is just a 'coding system', huh?

Also all computer languages are 'coding systems' too... in fact all languages of any kind are merely 'coding systems' to convey ideas... which is what cw does as well.

You just cannot get your mind around that you have lost on every point, Cecil. What a delusional loser you have conclusively proven yourself to be.

ROTFLU!

If that were so and you had been doing so for 49 years, then it is
pretty clear you would have no trouble passing 20 wpm Cecil. Since you
are so clearly part of the lazy whiner contingent that is clearly not
the case.

Your lies are proven as such, Cecil.

It is either repetition or it is not, Cecil.

My do you desperately attempt to squirm around rather than admit you have so clearly and conclusively been proven WRONG, huh Cecil?

> Please describe how you use CW without memorizing the code/character
> translation.

Please describe how you use ANY language without memorizing the code/character translation, Cecil.

> Do you develop Morse code from first principles every time
> you use it.

Do you recreate language every time you flap your gums, Cecil?

> You seem not to know anything about Morse code.

I know quite a bit more about morse code than you do, Cecil...that much is abundantly clear. It is you who know nothing about what you desperately wish you could speak authoritatively about.

ROTFLU!

> I suspect a CBer on the troll.

Again Cecil proves himself to be nothing but a delusional and factless twit.

> > It is the same as your french teacher telling you not to
> > translate/convert but to actually think in the language naturally.
>
> Ah, but nobody thinks in Morse code.

Nobody? How do you know, Cecil? And I can read a sign and 'think' it in morse without translation.

Can't you?

ROTFLU!

You really are a CBer, aren't you?
> --

Not as legitimate... the sending tests were removed for legitimate
reason. An arthritic, or someone with palsy, etc, would be unable to do
so... so long as you allowed the keying means they needed to utilize,
there should not be much of a problem... it is the receiving that is
what counts.

What you consider 'obvious' is pure idiocy for the rest of the world,
Cecil.

And I post a name... thanatos999. You do not like it, deal with it. I am not required to post more.

I have a call... and it is far superior to yours and I have posted it already several times in this thread.

And you have not disproven or discredited a single thing I have said, Cecil while I have pointed out your dishonor, dishonesty, whiny lazy nature as well as your idiocy, foolishness and delusional status clearly and conclusively.

And poor little Cecil just cannot seem to deal with it... poor baby.

ROTFLU!

Hate messages? Hardly. It is the lazy whiners who spew the hate.

And as for writing computer programs capable of being used to post to
ngs, I have done so... haven't you?

> Get a life,

Have one, thanks. And at least I earn my way through it... I do not
lay about lazily whining for everything I want like some participants in
this ng I could name...

> CB is what you act like, not a test you pass.

Actually it is a cesspool of a band... something the whiners will turn
Amateur Radio into.

I have been 100% on the money will every one of my other assessments.
There is no reason to believe I am not right in this one as well.

Especially with Cecil providing such a model example.

It is *not* a language, it is a coding scheme, like ASCII, memorising CW codes from ham radio has about the same relevance as memorising ASCII has for computer operators. I'm an old timer in computer programming, when I studied it I had to enter a program on the front panel switches of a PDP-11, it made some sense then, but it would be silly to have that as a requirement now.

Ham radio must change, the internet is available, free in many places, it does not require a license, you can talk to people around the world. Most hams today don't want to listen to cw, so even with thousands of new American Extras, you'll still have those cw bands to yourself, but don't stand in the way of those who want to try other, more cutting edge modes!

Hi folks:

I have a version of HAMCOMM. I bought a cable to attach to a serial port and it goes to the speaker jack on my receiver. Being new to this setup, I have failed to receive any readable stuff. What am I doing wrong?

I have a RS DX-390. I am using an IBM PS/2 57 as a dedicated terminal. I tried to tune in the signal and received nothing but random characters.

You can only understand Morse if the sender and you speak the same language. If I send you unaccented French in Morse and you don't speak French you're not going to understand it.

>to happen in the next 20yrs or so when 'analog' tv is phased out, but maybe
>I've just been assuming again?... ;)

In theory, this will happen when the current AM NTSC transmitters are phased out in 10 years. But I just don't believe that everyone will have gotten rid of all their old analog TV sets in the entire USA in 10 years, nor do I believe that people who have old TVs will quietly junk them when analog broadcasting is about to cease. No, they will complain, and make lots of noise at it. I wouldn't hold my breath on getting that spectrum back.

Dave

The Morse code was published in advance.

Cecil, if I give you a copy of the Russian alphabet to memorize will you be able to speak, or write, Russian, and take a multiple choice test to prove that you can?

The same frequencies will be used, just different "channels" in each market.

By that I mean that if you have a Channel 6, it will be issued a license for say Ch 25 to broadcast in HDTV. They will broadcast on both channels for a while (either 7 or 10 years I think) one for analog one for HDTV, after which they will have to give up one of the channels.

The interesting question for some is what channel they will give back. For whatever reason, it seems to be "better" (i.e., more prestegious) to have a lower channel number. Theoretically I guess, the lower the number the lower the frequency and therefore the greater the range, so everyone wants the lowest possible number.

Anyway, if your local market has 6 TV stations, it will temporarily have 12. The interesting thing is the way the FCC worked it all out to have as little interference as possible from neighboring cities on the same channels. Apparently, when the channels were announced it created a great controversy among most stations that felt they were give the short end of the stick--or range so to speak.

I work for a cable company and read several article in trade magazines about two years ago, but never really got interested in it since it really didn't affect me. However, it led to an interesting situation with hospitals.

Apparently some of the wireless monitors used in hospitals use TV frequencies. The manufacturer got permission to build very low power output transmitters (something like 10-25 milliwatts). When the hospital orders the thing, the company checks to see what TV stations are within X miles and ships equipment on different frequencies.

Apparently, when one TV station in Dallas turned their HDTV transmitter on, it cause every receiver in one hospital's cardiac unit to go haywire and for a scary moment the staff thought about 15 people flatlined all at once. Needless to say, the TV station shut down temporarily, and many hospitals when through a quick check of the frequency allocations for their local TV stations. I had a guy from a local hospital's engineering department call me to see if I knew what was going to happen in our area. I put him in touch with the FCC with a shake of the head and a "huh" expression on my face. About a week later, I read about the incident in some trade paper. I thought about trying to find the guy and tell him I no longer thought he was nutty.

And I would not miss you. There.. we're even... as if that matters worth a tinker's damn.

Just gotta love these fools... Amateur Radio is being destroyed... anyone who speaks the truth about it is just told to take a hike. Really puts the attitudes and agenda of those telling such into perspective quite nicely.

You complain, yet you tell me to sell my equipment? I gave a solution
to those who continually cry and whine about the recent events and I
take it that I hurt your feelings. Not once did I complain in this
post, and you say that! I guess you will just have to keep
entertaining us with your stupid, irrelivant post which are pertaining
to the past. Its over, Why continue to have a temper tantrum about it.

HDTV transmissions have already started and according to reports of viewers it's quite impresive. However my point (prompted by numerous battles by industry to take part/all of the VHF/UHF ham bands) is that allocation of the TV channels is a huge waste of frequencies. If TV were reallocated to

Ku band satellite it would free up this terrestrial resource and take the pressure off us amateurs.

Last year the DISH network backhauled the major city network stations off satellite using the MPEG2 digital technology. From a viewer perspective this was pretty neat. One could select the time zone they wanted so's to view major network feeds. Also, one could watch local news for a particular area. The DISH network has since moved these feeds off satellite to fiber.

This experience has raised the question in my mind, "Why don't the major networks broadcast unencrypted via Ku band satellite to the general viewing audiance?" "Why continue supporting numerous affilate terrestrial stations?" With small dish MPEG2 techonology they could economically cover the US with 3-4 time zone feeds which would deliver crystal clear advertiser supported reception to each household in the US.   Indeed, this is what the "dish on a stick" firms are doing now, except they charge a monthly fee for delivering this service.

MPEG2 receivers and Ku band dishes are very cheap and if Free to Air (FTA) major network services were available, there would be little or no need to tie up a hundred MHz or so of terrestrial frequency resources.

Well, they will have adapters available... but from what I have seen
they will be almost as expensive as a new set.

Sorry but my response was simply a rephrase of your own. it was
entirely relevant, not stupid at all, and it seems to me that the only
one throwing a temper tantrum is *you*.

If you cannot take it don't dish it out.

I would not worry about the hum you heard. You are picking up the residue
of suppressed carrier. Try transmitting into a well shielded dummy load and
then listen to your signal with another receiver without an antenna.

Hi Group:

I want to thank all those people that helped with advice and microphone suggestions for my HW-101. I had my first contact in 10 years thanks to all of you.

I bought a Yaesu YD-844 50K ohm microphone from Purchase Radio in Ann Arbor, MI. I had to rewire it to fit the 4 pole connector on the Front Panel of the radio. Simple job.

I then took my time and built a multiple element multiple band Dipole antenna. I just got through with a contact in New Jersey / New York area. WA2YXC is the call and it had a nice audio and some fade in the distance. But, the system works.

Thanks again
Curtis Scholl

Can you please explain to me again how passing a cw test of 20wpm will, prevent someone from, in your words, "have a clue as to the actual workings of the thories they are being tested on". I know plently of people that can do cw (20wpm or better), yet cannot change a lightbulb. I agree, keep the cw requirement high, in fact, let's raise the standards to say 35 - 50 wpm. Then the question will be, do you still qualify for this exclusive fraternity you call "extra"? EXTRA what? I think technical knowledge is much more important than code speed, hands down.

I don't care.

Point is that everyone says, "I remember when...   ...it was better then."
Get over it, the times they are a changing.

Why do you continue to attempt to value yourself greater than your peers based on what? 1) The fact you passed a test under the old rules. 2) How much lomger you will be missed. What's next? My daddy can beat up your daddy or my bike bike is newer than yours? Get over it. Either adapt to the changes and accept them, keep bitching until everyone tunes you out or just walk away.

Mark, K1MKF

The point is that you cannot just cram for the 20 wpm exam in a couple nights and pass it... you have to actually acquire the skill to receive cw to pass that exam.

You need no skill or real knowledge to pass any of the written 'tests', since the questions and answers are already public knowledge for months in advance.

What would you think of the calibre of a college education where all the exams at the school were done as the written tests for ham licenses are?

> I know plently of people that can

Again at this point you would be proposing a change. As such you would have to demonstrate the reason for such

Where do you figure it is exclusionary? And do you not notice there is also an additional TECHNICAL knowledge requirement allegedly for Extra as well?

Yep, you have to rote-memorize like crazy. Why is it OK to rote-memorize
Morse code and not OK to rote-memorize the written exams. Inquiring
minds want to know.

You gotta be kidding, Gary. From Webster's: "rote - routine or
repetition carried out mechanically or unthinkingly." That
describes 20wpm Morse *perfectly*. In fact, some Morse gurus have
said, "Repeat it over and over until it becomes mechanical." If
there ever was a good description of 20wpm Morse, it's "rote".

Piece of cake, Bob. If that had been the requirement, I
would have been an extra a long time ago.

No, YOU have to be kidding, Cecil.  You are comparing apples and oranges
when you say that memorization of Morse characters to build speed is
analagous to memorization of exam questions.  If you have successfully
"memorized" Morse at 20 wpm you have learned a language.   You can recall
this information again and again and in doing so develop a skill (yes - an
out-dated, out-moded antiquated, etc. etc. skill).  What does one "learn" by
memorizing exam questions?  Anotherwords - who can retain a larger
percentage of the acquired information at a later time?  That is the
difference between memorization and learning.

Ummmm, Mark... what would make you say such a clearly disproven thing?

After all, all the unacceptable changes came about by whiners such as
you (or at least those you appear to be supporting).

As such maybe if I and others complain enough we will get what WE want,
ya think?

Of all the things 20 wpm MIGHT be, "rote" damn sure ain't ONE of them!
Copying, and WRITING DOWN CW at 20 wpm is a SKILL that must be
practiced - much like juggling or learning to play a fairly complex tune
on the piano - CW at 20 wpm is difficult for most because at that speed
you MUST be capable of deciphering characters and common words by their
SOUND, not ny counting dits and dahs - AND, due to the speed, you must
also be writing it down 2 full characters after it is sent - an act of
coordination and concentration FAR in excess of that at 5 or 13 wpm...
Copying 20-40 wpm in your head is not that difficult - it's doing it
while writing it down that's hard...

Cecil
Your wasting your breath. It is obvious that his mind is closed to
this subject. He is under the delusion that someone who has passed
the 20 wpm code test is superior to all those who have not. When did
the ability to do code at a fast speed justify such inflated ego's.
I am an Extra and was glad to see the end of the 20 wpm code as
a right of passage into the Extra Class ticket. The 20 wpm code test
has hindered many from becoming Extra's. Many who are Electrical
Engineer's and so on. Some of us found doing the code difficult.
Mike AB0IV

Another one avoiding the question. Cant any of you liberals answer a
direct question without rambling on like you have intentions of
answering but never do?

Here is the question again, Lets see how long it takes for some one to
give an actual answer....

Can you please explain to me again how passing a cw test of 20wpm
will, prevent someone from, in your words, "have a clue as to the
actual workings of the thories they are being tested on?

Only idiotic fools with closed minds do not accept change.
You must be one of those Extras' with one foot in the grave and the
other foot on a banana peel. You may have seniority, but you dont have
priority. Get real and wake up, because this is the year 2000, not
1941.

Its kind of funny that after all these years, These people started complainig about the question pools. Why didnt you complain before you took your test. You get your tickets then complain about it. What a bunch of bigots. When someone changes the license structure you complain because it doesnt benefit you!! I'm not going to sit here and complain about the only License Class that got royally screwed, But I will mention that The Advanced Class Op has the only reason to complain. Not because of the code, but because he is in the same boat as a general. I feel for you guys, But the constant babble is getting you no where.

Mike,

As i said in a different post, knowing you probably dont want any pitty, but I do feel for you and the rest of the Advanced users due to the fact that you are now in the same boat as a General. At least now you have an advantage and all you have to do is take the Extra written and present it to a VE after April 15th to get your Extra ticket. Only question I got is, Since you are an Advanced, Will you have to take the complete Extra class question pool after April 15th which includes the Advanced questions as well?

I recently have taken several of the Advanced sample test (without even studying for it) on QRZ and passed but dont know morse that well to become that class of operator. Now that the code requirements are lowered I can do what I wanted to since I first got my ticket and had a strong interest in ham radio. Now that I can go for it, I will be doing my best to get there.

Really? Where are the alphabet and syntax rules for the Morse language? I was under the impression that Mr. Morse spoke English and invented a *coding system* for the English language and it was originally designed to mechanically punch holes in paper tape. If you're not coding the *English* language, how do your fellow American hams ever understand you?

Morse code and Ohm's law are learned exactly the same way. If you use it, you remember it. If you don't use it, you lose it. After 49 years as a ham, I am very practiced in the use of Ohm's law.

Well, not exactly. There will be no new Advanced after April 15.
Until that time, we advanced hams don't have to repeat the
advanced exam. All we have to do to qualify for a future extra
license is pass the present (4B). That's what I intend to do
tomorrow.

With all due respect Cecil, the dictionary suggests repetition . I don't see where the word 'rote' applies to CW at 20 WPM. The tests are changed regularly. Simply put, you will not do random CW at 20WPM with rote memorization. On the same subject, why in the world does any one want to make an issue out of one's ability to do 20WPM or 2 WPM. What possible difference does it make? Does that somehow make one person 'better' than another?I don't think so. This coming from a person who has been in Amateur Radio since 1950 and operates regularly at 35 WPM. I only just wish that we could all get along better and make a better attempt to get along. There is plenty of diversity in Amateur Radio for all interests. 73........

From Webster's: "rote - repetition carried out mechanically or unthinkingly."
That is an *EXACT* description of what I'm doing when I receive Morse code.
Code gurus tell us to, "Repeat the code over and over until you can do it
without thinking about it".

The 20 wpm code test has hindered many from becoming Extra's. Many who are Electrical Engineer's and so on. Some of us found doing the code difficult.
> Mike AB0IV
>
Here we go again....those poor electrical engineers....can't learn code and need special treatment so they can become Extras. How about those who are totally non-technical by education and still manage BOTH the code and the theory. Is there some reason that EE's should be exaulted in some way?

Shall I go dig up the many posts where you stated
unequivically that you would NEVER get an extra class
license under any circumstances?

Aw, well...... You never had a half ounce of credibility
anyway.

If all who post here would use the energy they expend p---ing and moaning
about the death of amateur radio
and .would accept what they can not do anything about; then work to get the
hobby back on track. it just might not die.

I wonder why all this hoopla is taking place on a "computer" based newsgroup
instead of over the bands?

I am not taking sides one way or another, but when I went to
Washington State University, learning a computer language fulfiled
a foreign language requirement.
In reality, learning the moris code is another way of expressing a
language. Italian and Spanish are very close. In fact, if a person can

real Italian, he can often understand written Spanish. Yet both are
distinct languages. I am not tryig to argue anything, but just making
a comment,
73's Henry

Small Aerospace firm always collecting resumes and future employment contacts.   Titles are irrelevant to us.
In keeping with the history of Aviation, we accept resumes from everyone: Bicycle mechanics, hobbyists, HAM radio operators, kit plane builders, rocket enthusiasts, as well as professional engineers and scientists (undergraduate through graduate).

OPENINGS:

Aerospace Engineering, Electrical/Electronic, Mechanical:

Spacecraft / Rockets-- Design & Project Management, Systems Engineer, Structures, Payload, Attitude Control, Telemetry, Flight Computer, Tracking, Power, Thermal, all relevant subsystems from design through flight following.

Other: Materials Engineering, Chemistry, Physics, Planetary Science, and other related fields.

Aviation & Technical:

Airframe & Powerplant Technicians, Automotive Technicians, Electrical Technicians, Machinists, Draftsman, CAD/CAM and other skilled labor capable of enhancing our projects.

Hobbyists/Other:

Depending upon your skills, we also love working with people like HAMs, skydivers, ultra-light pilots, kit builders, rocket & balloon enthusiasts, and remote control fans. Often, these people provide a valuable, experienced, and unique consulting & skills base in excess of a standard engineer. Some even have educational and career qualifications in excess of what we need. So, don't be shy.

COMPENSATION:

Arrangements run from 10% over your maximum job offers with full employee package (for the super-duper engineers and grad students).

Other options include contractual work and partial ownership on a per project basis. For example, when our engineers say "Hey! We should work on something in that area."... we tend to recruit a CEO, CTO, and project team and place that under a subsidiary relationship.

APPLICATIONS:

Email your resumes to: space_physics@yahoo.com

Thanks in advance for submitting to our HR database. We will not be replying to most applicants. Please indicate the length of time that you would be interested in tenure, geographic preferences, desired compensation range, and list your skills or experience by keyword.

A buddy of mine and I are wanting a means of reliable, mobile 2-way communication throughout Oklahoma City....I'm looking, in particular, at the Radio Shack HTX-242, a 45 watt 2 meter radio. I'm hoping for a range of 30 miles or so.

Is this unrealistic? I'm totally unfamiliar with ham radio and would appreciate any advice anyone might have to offer. Thanks..

Here is some simple advice, Go get your ham license and then get the radio. With the use of many repeaters on the 2 meter band, you may go further than 30 miles maybe 60 or so. There are a few here in California that reach as far as 150 miles that I know of...

Hope this helps!!!

I am currently hitting repeaters in excess of 50 miles away with just 10
watts on FM 2-meters.

Well... Mobile to mobile good luck. Not too likely, unless you go
'external' through a repeater. In that case, it's strictly a repeater
coverage issue. With 45W, you'd be on the 'strong side' of the
statement that 'If you can hear it, you can work it' with most
repeaters.

Mobile to mobile is going to be degraded by the terain, and
as flat as it looks, it just ain't. Buildings and slight variances
in terrain are going to get you as well. 30 miles, well, maybe,
IF it were really 'flat' and IF you had fairly unobstructed path...

But if you have a repeater, over 'relatively' flat terrain, just getting
100' in the air and 30 miles is easy. That's FROM the repeater.
I couldn't run mobile to mobile from my home about 15 mi north
of Ft Worth to even downtown Ft Worth, but had no problem at

all running the same distace from my car to a friends house with
the antenna first 40' then later over 60' in the air. We made our
own repeater and routinely worked through it with 1W from 15
miles away using our HTs. But his 'base' was 60'+ in the air.
(This was both 2M and 220.)

Mike

Base to base (45 watt rigs) homemade j-poles or quads, put them up 20'
or so I bet you'll have good luck! KE4QOP John

BTW...A reply to all of the nasty e-mails I received from people. I have no
intention of going on the air without a license...I merely wanted to see if
going to the trouble of getting a license and spending the money on a radio
would be worth it.

Chill out, folks..:-)

What do you mean "Going to the trouble"? There is no trouble
getting at least the beginners license.   If doing a little work,
and I do mean little, then it really didn't mean much to you and you
should really look at getting NEXTEL radios.

David

P.S.------

In another era, I was on a ship that worked aircraft out, beyond radar range....say 250 miles, on 243 Mc....day in and day out...RUNNING from 8 to 12 Watts!

The propagational path loss is truly trivial at VHF/UHF...BUT the Terrain loss, due to the obstacles the others mention is a HARD fact.

Get the "ticket", get on air, and suprize yourself.... "DM"

Matt,
The last thing that most hams want to do is discourage you away from ham radio.
I'm sorry that
you received nasty e-mails. The 30 mile range is testing the limit- if you have flat terrain, decent rigs,
and resonant antennas, you stand a good chance for communication.
If you are in a noisy, hilly environment, you may have a problem without the use of a local repeater.
In my area of NJ, it is difficult to support a direct 30 mile range with mobile setups.
Local amateur radio clubs can help you study for the test and get you set up.
Good luck.
Al

Mathew,

I agree with AL. But just remember, he said 'most HAMs'. HAM radio
is nothing more than a cross section of society. In some cases, there
are a higher percentage of certain types of people, but basically you
get all types. Including those that will assume the worst and be
idiots.

But there will also be a lot of people who WILL welcome you and
smooth your path if you decide to get that ticket.

Just as there are "*" in society, there will be "*" in HAM radio.

Mike

Hmm, invest in the Gordon West no-code book first. Take it home, do some
studying. Then call
around and find out when the next VEC testing is in your area. Then go take
the test, pass it, and get
you license from the FCC. Then I'm sure you'll have no problem
communicating.

Of course it is, if 2 meters don't work, try another band.

One of our club members, a lifelong Ford truck owner, has every one of his new Fords oufitted with some kind of ignition mod to eliminate noise. He says it's some kind of dealer-installed thing which they also perform on law enforcement vehicles. Hopefully your Ford dealer will know about it. Good luck.

Who makes slotted coax (the kind that "leaks" a certain amount of signal
on purpose)?

I want to try sharing 802.11 wireless ethernet (2.4 GHZ direct sequence)
throughout several floors of a concrete building.

Any thoughts/suggestions appreciated.

The most common type of "leaky cable" is made by Andrew and
is referred to as "Radiax" ..

Hi, I'm looking for old synths (Moog, ARP, Sequential. Oberheim, Roland, Korg, etc), effects, drum machines, vocoders, tape echos, sequencers and other electronic musical instruments or accessories, in any shape, BROKEN OK.

The older or more unique, the better.

Please email me privately if you have something I might be into or know someone who might. Be sure to include price and condition.

A short list of examples:
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
Voyetra Eight polyphonic synthesizer module
Integrated Kyboard Wavemaker 4 or 6
Oscar with or without MIDI
PPG Wave 2.3
Studio Electronix P-Five Pro-5 analog rack module
Morenz-Perkes 1200
PMS Syntar
etc!!

Thanks for your time!

Sent via Deja.com http://www.deja.com/

[First, why is this cross-posted to 4 NG's and one non-group hierarchy?]

For Japan, go to the JARL web site.

I have a Yaesu FT-2200 two meter transceiver in beautifull shape bought
it in 1998 from Jun's and it is loaded with bells and whistles like
extra extended receive/transmit, all manner of offsets, 50 watts, quick

release mobile mounting bracket, up/down mic, etc. I want 200.00 or will trade for a DX-398 or DX-392. My reason for sell or trade is I have an abundance of vhf, hf rigs but I do not have a portable SW rig to listen to outside of my shack.

I've designed two maps (2 meter & 440 MHz) showing repeater locations/frequencies in San Diego County, California.

(These links will function properly!)

http://roars.8m.com/roars/SD2m.html

===========
The band plans for Region 1, Region 2, and Region 3 are different -- see
URL:
http://www.arrl.org/field/regulations/io/faq.html#freq

Also if you look at the band plan for the USA, we can operate phone from
7.150 to 7.300 depending on license class.
See URL:
http://www.arrl.org/field/regulations/allocate.html#40

Many other countries are permitted and do operate phone well below the USA
band plan. For example -- the UK:
IARU Region 1 bandplan UK Usage
   7.000 - 7.035 CW only Primary
   7.035 - 7.045 Digimodes Primary
    Phone may be used above 7.040
   7.045 - 7.100 Phone and CW Primary
See URL:

Try Kaval communications in Ontario, they make a tapped feed line and signal splitter arrangement with much greater control over where signal is distributed.I do not have their address handy but they are on the net.

Could it be the Ford has split-fire spark plugs in it? I had interference from my motorcycle engine, noticed the popping increased & decreased as my RPM did. Turned out to be my split-fire spark plugs; replaced them with conventional plugs (solid tip) and the problem stopped. Put the splits back in, problem returned.

Just my $.02 and YMMV,

Matthew,

You've started quite a conversation here and most of it looks very informative. One of the first replies talked about getting your no-code tech license from your local amateur radio club and that's very sound advice. As well is the advice on the 2 meter mobile you were interested in. I own one HTX-242 and also it's earlier version the HTX-212. Both are fine radios.

Also mentioned earlier were repeaters and a great discussion followed. I don't know if anyone took the time to explain what a repeater is but basically, it's one of these building top or mountain top locations that has a radio that recieves your signal and repeats it using a better antenna than your mobile and also a lot more wattage usually. They are mostly run on duplex which means your radio transmits on one frequency and recieves on another.. You don't have to worry about all that once you put the frequencies into memory.. It's all fairly easy and is explained in the manuals from Radio Shack.

I myself have worked a repeater from 65 miles away with my 5 watt handheld plugged into a simple magnetic mount antenna on the roof of my truck. Now let me give a little more info on that repeater I worked.

It's part of the repeater network here in interior Alaska that covers over 60,000 square miles. Most of that area is primarily occupied by Moose and Bears but, it's nice to know that if you happen to ride out there on a snowmachine or 4 wheeler, you can always get help if you need it. Here's an address you can look at to see what kind of coverage a really good repeater network has.

http://www.admin.uaf.edu/aarc/AARCrptmap.html

Most of our repeaters are linked together so that I've been able to talk over 300 miles with just my mobile radio and a magnetic mount antenna. It all depends on your local club and the cooperation they might have with other clubs. The network we currently have is sponsored primarily from our club with some help from our parent club in Anchorage.

Another nice feature with a lot of repeaters is the ability to do what is called an autopatch. This allows you to make non-business related calls thru your radio and the repeater. Great for telling your friend to turn on his radio or to call the missus and see if she needs you to get eggs or to call a tow truck when you're stuck.

Well, hopefully I was able to shed a little light on this subject and not totally confuse you. If you have any questions, don't hesitate to ask.

Paul Jordan

Ok, so I have an Eagle Spitfire 454 from Copper- I know the mod that makes the frequency coverage just like the Cherokee AH-100 after mods, 25.165 to 29.700mHz. However, if you've opened the rig you know that there's like 10 different solder points there that could be bridged or open. I'm wondering what these other ones do. Why can't this radio open up from 25-32 mhz like the 2950? Is there a mod to make the clarifier track on transmit as well? How about getting rid of that HORRIBLE keypad beep? Is there a mod to step in 1Khz steps rather than 10? There are enough solder pads there for a whole bunch of different mods. Any way to get a service manual for this rig? Or sources for the other clones? All I can find is the Eagle and I've never personally seen the Titan and Dragon versions....

Also- this may not interest anyone here in CB land but I also have a Cherokee AH-50 SF, its a 6 meter handheld rig. It has four open solder pads inside, and two empty holes with a diode picture silkscreened on the PCB. I bridged all four solder points and put a diode in the holes where indicated. Nothing happened. Does anyone know of any mods for this rig or a way to get a service manual?

Hi!

I understand the whole point of (most) mods; the manufacturer has designed in certian features and then blocked them out in certian versions of the radio, to accomidate different bandplans, etc in different countries.
I'm not specifically questioning "why cant I TX from 25-32 mhz like my 2950", I'm merely stating that there are a LOT of jumpers in the radio and there are probably a lot of different options that could be enabled/disabled. I am wondering if anyone has a list of the jumpers and what they do, OR knows where to get a service manual for this radio.
Copper sells a video tape covering the mod. Im wondering if anyone has seen it and if it just covers the 25.165 to 29.700mHz mod (like the Cherokee AH100) or if it covers each of those little 'jumpers' and what they each do.

Also I am very interested in the AH-50 and AH-50SF 6 meter HTs from Cherokee. I performed mods as indicated below and nothing happened!

I've found it difficult to deal with Cherokee, (Wireless Marketing in Schaumburg IL) and impossible to find Maycom, the original overseas manufactuer of these units. Has anyone ever seen a service manual for any of these units? (AH-27, AH-50, AH-100....?)

Thanks.

Hello! Please see my other post in reply to this.  I just pulled my
Eagle 454 out of the box and checked- you are wrong, when I hit the
'step' button I can choose 1,10,100 khz steps.  Right out of the box- I
did no mods to this rig (yet!)

I checked your website- it's pretty good.  I have a question- on your
10m page, what's the difference between the "Titan I- the Titan 201"
and the "Titan Road Pro".  I noticed your picture of the Road Pro is
Copper's picture of the 454-from their website- with the name blacked
out!! Next time I'm down NJ way I'll stop by with my digital camera and
```

take some good pics for you! :D

Seriously though- as a dealer, do you have any access to a service manual for these radios? Obviously they are all made in the same factory so a Titan manual should be the same or similar as the Eagle. If you have any contacts with the factory I'd like to try to contact them directly (although I dont know how useful a Phillipino manual would be!)

P.S. My freq counter doesnt go below 30 mhz so I cant verify this- does the clarifier on the eagle/titan track (change frequency) on transmit also? (I guess I could use another CB to see...)
I actually found a mod for the AH-100 to: Unlock clarifier and add FM compatibility but it refers to parts I can't find inside the rig. I think it may be a mistake.

they will TOS the perp.

Tony Williams.

Agreed
Jan
This is what I have as info about it from an other group:

Start (you find the discussion in comp.sys.ibm.pc.hardware.chips)
>>
>>It's the SubSeven trojan, you DON'T want to mess with it.
>
>Out of curiosity what does that do?

The SubSeven backdoor was first discovered in May 1999. First samples of
this backdoor
were not packed and were easy to detect.

Later version were packed and could not be easily detected by contemporary
anti-virus
programs that had no Win32 'Aspack' file compressor unpacking capabilities.
The backdoor
was distributed under different names via newsgroups and e-mails.

When run, the backdoor copies itself to \Windows\ directory with the
original name of file
it was run from or as SERVER.EXE, KERNEL16.DL, RUNDLL16.COM,
SYSTEMTRAYICON!.EXE or
WINDOW.EXE. Then it unpacks a single DLL file to \Windows\System\
directory -
WATCHING.DLL. After that the backdoor patches Registry so its main
application could be
run during next Windows bootups (RunServices key) and finally creates and
modifies some
other Registry keys. The backdoor can also install itself to system by
modifying WIN.INI
file.

(this copy creates msrexe.exe, and mueexe.exe in the Windows dir, and
creates a registry
key that won't allow any application to run without musexe.exe being found.)

The SubSeven backdoor task being active in memory (and invisible in Task
Manager) looks
for TCP/IP connections, and if they are established it listens to TCP/IP
ports for
commands from client part. A person who has a client part gets control over
remote system
where the server part is installed. Here's the list of 113 SubSeven's
capablities:

```
Fun Manager
------------------
 1. Open Web Browser to specified location.
 2. Restart Windows.
 3. Reverse Mouse buttons.
 4. Hide Mouse Pointer.
 5. Move Mouse.
 6. Mouse Trail Config.
 7. Set Volume.
 8. Record Sound file from remote mic.
 9. Change Windows Colors / Restore.
 10. Hung up Internet Connection.
 11. Change Time.
 12. Change Date.
 13. Change Screen resolution.
 14. Hide Desktop Icons / Show
 15. Hide Start Button / Show
 16. Hide taskbar / Show
 17. Opne CD-ROM Drive / Close
 18. Beep computer Speaker / Stop
 19. Turn Monitor Off / On
 20. Disable CTRL+ALT+DEL / Enable
 21. Turn on Scroll Lock / Off
 22. Turn on Caps Locl / Off
 23. Turn on Num Lock / Off

Connection Manager
-----------------------------

Yes, I agree that Demi Moore as G.I. Jane, and we go out
target shooting together, would be really great!!
Heck, she could even join my partner and I.

(if you look at my ham station in the QRZ link below, you'll
 see why this makes sense!) ..

Of course I'm outing myself to the public-at-large
regarding my preferences in relationships..

But... what the heck... It's fun being honest
about what one likes :-)

Also, I'm NOT available.. Am in a solid relationship
for the past 14 years and she is listed as my domestic
partner with my employer, so she gets the appropriate
benefits..

Trish

Hi Group!

I think I may need a LOW PASS filter to keep my emissions from interfering with the TV next door.
Here is the situation from the evidence presented so far.

Last week I had a multiband (multi dipole) inverted antenna up about 16 feet. It started looking very ugly so I built a multiband (three different quarter wave) vertical. Last week I received no complaints. This week I am told that my antenna is radiating into her TV. She hears my call sign on the unit with a fancy cable box in the living room. She does not hear me on the non cabled TV in the back room. Yesterday she did not hear me either and the verticals did not have a "counterpoise".

This morning I ran some 10/15 foot wires from the central ground point of the antenna out to a distance of 10 feet give or take to make a "ground plane". Now she hears something in the cable box.

Is there enough evidence here to suggest that the cable for the TV set is underneath my counterpoise? Or is the power line being invaded by my signal? If it were the power lines being polluted, would not the older TV in the back room be affected?

Would a LOW PASS filter that would allow nothing above 30 MHz to pass be sufficient or would anyone suggest moving the ground wires around?

Curtis Scholl

I'm doubtful that a low pass filter on your transmitter will do any good. This sounds like typical fundamental overload to me. If you were radiating harmonics, they would show up on specific frequencies, and would move as you tuned to different frequencies. That doesn't sound like what's happening. The fact that the over the air TV is unaffected reinforces this conclusion.

You're just coupling enough amateur frequency signal into her cable box to cause this symptom. What you need to figure out now is how it is getting in, and how to stop it. (Actually, it isn't legally your problem. It is the cable company and your neighbor's problem. But trying to be helpful in solving the problem is a good neighbor policy.)

The signal could be getting into the cable box either via common mode on the cable or via the power line. Since the problem didn't exist when you were running a horizontal antenna, but does now that you're running a vertical, you need to look around and see how the relationship between your antenna patterns and the cable and power lines have changed. It is likely that you now have a current loop paralleling one or the other now when you didn't before.

Unless you want to change your antenna system again, you can try ferrite filters on the power cord and cable at the offending cable box. (Providing the neighbor will let you do that.) There's no filter you can add to your transmitter which will help.

I sincerely doubt your problem is harmonic radiation- this being the ONLY problem that an LPF would solve. Sounds more like fundamental overload of the TV (HPF) or common mode (ferrite chokes).

A properly operating cable system would not pick up radiated signals. However, I'd say your neighbor will need to install an AC power filter. She may need to filter not just the cable box, but also devices hooked up to it.

I had a problem where the audio from my transmitter would come through the speakers on my television, hi-fi vcr, stereo with surround combination if I have the dolby surround "ON". The television receives it signal from a yagi on the roof. I use a R7 vertical not too far away. The interfering sound is not to loud and goes away when I turn the Dolby surround "OFF". My transmitter does interfere with the television picture a little mostly when I am on 20 meters phone and the television is on channel 4. I have tried Radio Shack and Vectronics HP filters on the TV and VCR and wrapping the speaker wires with ferrite but it does not seem to really help. The Vectronics has both a HP filter and ferrite core for common mode. It is not that bad of interference but I would like to get rid of it. Do you think wrapping the AC cord with a ferrite filter would help? I am only concerned about the sound interference. I guess I could try the old LC 100 uH choke and .001 uF shunt cap on the speaker side trick. I hate to go through all that work to see that it does not help one bit.

Since my shack is in the basement I use a cold water pipe for ground. I have a ground rod next to the R7's antenna mast. I strap the ground rod to the cold water pipe also. I also have a Alpha Delta Transi-Trap lightning protection device in-line with the HF cable. The lightning protection device is strapped to the cold
water pipe as well.

Snip:

Thanks for the list. I only see the ones in the news like Disney that
get some heat. Looks like the Southern Baptists have a whole bunch of
companies / products to boycott now besides Disney, unless they've
dropped the boycott of them.

Yes... We only put holes in paper.. not people :-)

anyway, thanx for the support and I apologize to the group
that we've strayed <way> off topic.

Anyway, I prefer the company of good friends over having my
picture on the front of QST..

Cheers..

Trish

Did this happen on all TV channels ? Was the picture affected ?

If the picture is not affected and the problem occurs on all channels, then this is an audio break through directly into the audio system of the TV.

Are there external speakers connected to the TV ? If so, disconnect the external speaker wires from the TV and the interference is not heard on the internal speaker, the problem is audio break through from the speaker cables. If there are no external speakers, then most likely, the interference comes through the power line and wrapping the power cord around a ferrite bar should reduce that interference.

Congradulations on your values.

Good friends are a rare commodity.

QST is nothing more than a processed tree with ink
spattered all over it. run buy a bunch of incompitent sexist.

Now before any of you newbies disagrees, look back
about 15+ years and you will find cases of women who
tried to run for ARRL office and were DENIED because
of their SEX.. this happened somewhere in the Midwest.

Can anybody remember more about this??

Just my opinions

Bob

Hi there.  I am searching for some old electronic musical instruments
 and accessories from 1950-1990, BROKEN OK:
```

old synthesizers, keyboards, drum machines, sound modules, effects processors and any old patchable modular or analog synth, pieces or complete systems.

The more unusual, the better. I prefer items with lots of knobs and dials but will consider anything thats capable of making unusual sounds or modifying existing sounds in a unique way.

Moog, ARP, Roland, Sequential Circuits, Korg, Oberheim, Paia, Aries, Steiner Parker, Buchla, Serge, Polyfusion, Emu, Synton, EMS, EML Electrocomp, Mutron, Maestro, EH, Yamaha CS series, OR ANYTHING SIMILAR

If you have something I could be into, please email me privately and be sure to include price as well as condition.   Thanks for your time and have a happy day!

Examples of items I am looking for:
Yamaha CS30 synthesizer with sequencer
Roland MKS-80 Super Jupiter
Pearl SY-1 Syncussion electronic drum module
Simmons SDS V electro drum brain
Simmons SDS7 Digital-Analog Drum System
Morenz-Perkes 1200
PMS Syntar
SMS Voice 400 & Digital Keyboard model 430
Electronic Dream Plant Spider

...and plenty of other stuff!

Sent via Deja.com http://www.deja.com/
Before you buy.

Then again, a properly operating cable system would be an anomaly.

(Who, me? Cynical? Angry because the local leaky cable system spent years with Discovery Channel, my landlord's favorite, on 144-150 MHz? Nawwww.)

I have a neighbor (a fellow ham friend) 2 houses away that has problems with my 40 meter CW
transmissions.   Three times he has had the cable company come over to is house to "fix" his problem. He also
mentions that one of the cable station's audio is at the same frequency as the air distress band.

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7, 12au7...etc) these are the twist-lock spring-loaded type used in radio and tube audio gear.

There are over 300 in the lot.

Stock up now!

Don't miss out on this one! Only 22 hours left to bid!

Any female, between the ages of 20 - 34, petite, nice looking, single,
moderately busty with a pair of nice legs. Brunette, Blonde, preferrebly red
hair.
Thats what my hormones call for. Hey do more hormones make one more
romantic?

I already spend romantic evenings with the person in the world I choose, so
I guess I'd have to go for the cover of QST.

Among the many things on my page there are links to some great ham radio pages that you ham kiss butts will love and links to some ham radio pages that satire the hobby. Something for all HAMS.

Welcome to ham radio-set your watch back 40 years

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. How you know you are a ham.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.

11. Did common German's enable the holocaust?
12. See now the future of ham radio.

The fact that this question has to be asked is very scary to me.

Hi;

One lot of (250) 9 pin miniature tube shields. These are for the
12AX7, 12AU7 ...etc tubes. Current bid is only $10.50 on the entire
lot.

I have seen these go for over $3.00 each on the net.

This is the last lot I will have up. I doubt you will ever find a deal
like this again!

I purchased a RS 2052 and am unable to get it to work
on the UHF Motorola system here in NJ.
I entered all the freqs as instructed including the data channel.
I push the trunk button select the bank and hit the search button.
They say that is to find the data channel. from there it just blinks search
and
thats it. I looked at the programming of a radio from the system and it is
type II/IIi is this the problem. It says it only does type II.
Any help would be appreciated before I bring it back.
Doug

I would have a picture of myself and my main squeeze on the front
cover of QST,in full technicolour,examining and swooning over my huge
erection whilst stood in my back garden.

```

If anyone has read this the LCD (non)thinkers get their way again.

First it was the 'no-code' license... "That will be enough" they said.
I knew that was BS... and history has proven me right.

The it was the much abused 'disability waiver' which I said long ago would cause rampant fraud and undermine the amateur radio service... few believed me and even though I am disabled I was attacked as someone who bashed those with disabilities.

Again, history proved me 100% correct.

Now we have the near final CB-ization of Amateur Radio...

a 5 wpm requirement for Amateur Extra with written exams where the questions and answers are publicly available and easily 90% of those passing the 'exams' (memory tests is more like what they are) will not have any clue as to the actual workings of the theories they are being 'tested' on.

At least the CW tests, while maybe not the most technically proficient, at least could not be fudged in this manner. You had to actually be COMPETENT in cw to pass the 20 wpm test.

Well, that simply reduces the quality even further, and unfortunately I fear that before the end of the next sunspot cycle Amateur Radio as we know it will cease to exist, being replaced with something akin to the sludge pot that is 11 meters.

The whiners who only are interested in the easy route for themselves and the profiteers who only have dollar signs in their eyes seeking to seel ever more radios win, and the hobby loses... again.

Dammit, sometimes I really hate being right.

And I really likes Amateur Radio... I fear I will not be able to say the same soon.

It was enough *at the time* to nudge the ARS out of the dark ages.
In Dec. '99, it was time for another nudge.

> Now we have the near final CB-ization of Amateur Radio...

That's what a lot of hams said when the no-code license was introduced.
It didn't happen. If CB troublemakers haven't flocked to the nocode tech
license, why would they study and pass a 5wpm Morse code requirement?

> At least the CW tests, while maybe not the most technically proficient,
> at least could not be fudged in this manner.

Of course they could. The Morse code was published in advance. They
merely rote-memorized the Morse code characters.

> Well, that simply reduces the quality even further, ...

That's simple to remedy. Simply raise the code requirement to 100wpm
and you'll get so much "quality" that the ARS will disappear for good.

> The whiners who only are interested in the easy route for themselves ...

What about the whiners who want to continue the easy federal subsidy
route for Morse code instead of having to expend some effort promoting
their favorite mode?

Like I said, it is never enough until they have simply turned amateur
radio into the sludge pit that is CB. The end result of the whiner
agenda is an absolute removal of any and all requirements, just like
with CB.

Most types like that look for the HF, not VHF. And I do not know about
you but *I* have noted a distinct decline in the quality of operators I
have been seeing even on the 2m repeaters.

Excuse me but that is an idiotic statement. You cannot rote memorize 20
wpm. You either have the skill to receive at 20 wpm or you do not.

Check with most 'extras' after this nonsensical pollution plan is
enacted and you will find they have no clue about the theories they were
'tested' on even just a few months ago.

Quality has been dropped another dozen notches towards the LCD.

> > Well, that simply reduces the quality even further, ...

Nonsensical gibberish... much like everything you have had to say so
far.

What ARE you ranting about? Where did someone get an extra class
license ONLY by passing the cw exam and not also by passing the written?

Where was this waiver for the written exam, Cecil?

I must have missed it.

No, my recollection that the no code license wasn't the first. It was giving 11 meters to the Citizens Band. However none of the events since may have been all bad. Today we have GMRS and FRS, what more could one ask for? Why just the other night my wifes purse woke us up (she forgot to turn the radio off) at 3:22 AM and alerted us to a drug deal in the immediate neighborhood going down! Now this is the kind of excitement one rarely hears on the ham bands :-)

As for scarcity of spectrum space, this is due to poor choice frequency allocations for TV. The VHF and UHF TV channel assignments are a waste. When I get to be King, all TV stations will be reassigned to Ku band satellite, opening up a huge spectrum of terrestrial frequencies in the process.

Excuse me, but the faster the Morse code, the *MORE* rote-memorized
it has to be.

Well, the morals and responsibility of a people tend to follow the ease
with which they obtain the luxuries of life and complain even then that
it's too difficult, crowded or time-consuming.

We are on that mostly forgotten slippery slope to perdition. Enjoy the
trip while you can; it won't last long.

This looked good for me. It has I believe a 12 volt PS and
composite audio/video inputs..

The most important thing is to make sure the set does the anamorphic
squeeze so you can watch wide-screen programming

>Anyone have a similar experience, but found it not to be the PS??

Well maybe not a similar experience, but I've replaces many power supply filter caps in old AM receivers that caused the same problem in the audio.

I found it very difficult to replace the old 4 or 3-in-one caps with original type replacements (in some cases, very expensive). In most cases I just hooked up several caps of the stated capacitance is the identical way or made up strange value caps by combining modern caps(parallel or series)... worked fine on most rigs, but I did notice on some that PLACEMENT of the caps and lead length can also be a factor doing it this way.

Remember something everyone: The International Treaty requires a knowledge of Morse code for operation below 30 MHz. It does not specify ANY speed. Once the Treaty is changed in the coming years, which it surely looks likely, then it will be up to each individual country whether they maintain a code requirement or not. Michael.

In the UK here if you look in any car magazine you'll see advertisments for all sorts of small screens for fitting into a car. The big names like JVC and Clarion even make screens with a built in micro and touch sensitive screen so can watch TV or videos in the car and also operate your car stereo via the touch screen. They come with TV tuners which are meant to be *fairly* good at working while the car in moving, but remember that (well it is here) that watching a TV whilst driving is a criminal offense.

Anyone know where one could download Icom Manuals??

Can't seem to find mine after the move and the radio needs re-programming.

Thanks.

Hello,

I'm planning on some wilderness camping in Colorado
and Wyoming. What is the emergency or general-purpose
wilderness frequencies that I need to be aware of and
what is a suggested radio and wattage? Thanks

Mark,

Go to www.ac6v.com and look for logging programs.
IMHO the 3 best Windoes based ones are DXBase2000,
DX4WIN, and Logger (which is free). However
LogEQF is also very popular.

Most backpackers carry 2M HTs and plan to use the repeaters. Colorado
has an extensive selection of repeaters, so one could use a 2M HT (1W to
5W) from virtually any higher spot, but probably not from the bottom of
a steep valley. Wyoming has fewer repeaters, but probably enough. Buy a
repeater directory and program all the local repeaters into the radio,
including CTSS, before you leave the car. I would also invest in a
telecoping 1/4 wave antenna, rather than the standard rubber duckie
antenna, as the rubber duckie antennas are quite lossy.

Richard

log-eqf.com   or might be logeqf.com you can find a link a AC6Vs sites, you should have all AC6Vs sites bookmaarked anyway-best site by far of all the sites and log-eqf is just about the best logging program out there. It is worth far more than he charges. I got the rig control from eqf also.

Yes, there are people who monitor them according to the wilderness protocol. I had my Boy Scouts in the Sierras for a week. We used the wp frequency on 2m and didn't broadcast durring the time reserved for emergency use.

At the end of the week, another ham came on the air and said he had been monitoring us all week long and wanted to know what we had been doing. (We also had a group of older scouts 100 miles away on a river trip. We would make contact with them at lunch time and dinner time.)

I explained that we were on a week long hike and the others were on a week long rafting trip. He said that he was part of a search and rescue group and was just curious.

But, it was nice to know a S&R group was monitoring.

73,
Brent

I'm looking to buy a desoldering station with the vacuum pump built in.
I'd prefer a Pace or Hokka system but will consider all offers. Please
respond directly to me at ghopper@eskimo.com

Thanks

The HT-220 Page has been updated with UHF tuning procedures and more articles in the Tech Tips section.

This website has information including model tables, frequency conversions, parts and accessories, manual numbers, tech tips and stories.

See http://www.batnet.com/mfwright/HT220.html

Back in the 20th century when only women wore earrings and men walked the surface of the Moon, the Motorola HT-220 was the hottest handheld on the market when it was introduced in 1969.

HT-220 is Y2K compliant.

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I never thought the old rig would attract a cult following!"
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."
"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."

"I still think it is the nicest looking, most purposeful radio ever produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

MIL-SPEC means military specification. The dept of defense has very strict specifications regarding all aspects of a product's performance. Anybody that manufactures items for the military must meet the specs for their type product. The spec might mean that the product is strong and rugged, or that it will interface with other military systems, or that it will fit in a specific pocket on a infantryman's uniform. You have to read the exact specification before you can determine whether or not it is worth the ink it is printed with. Call the manufacturer and ask for a copy of the spec or if you are in a city with a large library they may have access to a book of specifications.

I see a lot of HT's nowadays (including my IC-Q7A) that are advertised as "Meeting MIL STD 810 C/D/E for shock/vibration" Although I know this means it's built strong and rugged, I've always wondered exactly what qualifies a radio as meeting this standard. Any ideas?

Thanks

Jimmy

A what to work on on?

I've worked on many HT220s, couldn't be easier to work on, clean straight forward circuits, exceptional performance. These old crystal controlled radios make a mockery of "modern" synthesized radios. A HT220 with its 45 to 50 db signal to noise ratio really sounds good compare to todays synthesized radios with maybe 30 db S/N ratio.

Oh well, the price for progress..

The statement above really doesn't say much.  MIL STD 810 has a variety
of procedures and 'curves' which specifically define a particular test,
and some procedures are much more severe than others.  Unless the
manufacturer tells you specifically which procedure and curve they
meet, the claim is essentially meaningless.

For example, I make a product which has a moderate resistance to
vibration (but not the ruggedness you'd need to mount it in a tank or
helicopter).  Specifically, this product is tested to MIL STD 810x,
Section 514.2, Procedure VII, and Curve V.  Test vibration levels are:

Freq                 Excitation
5-5.5 Hz             1.0 inch double amplitude displacement
```

5.5-200 Hz 1.5g peak acceleration
Sweep Time: 5-200-5 Hz in 12 minutes
Duration: 1 hour for each axis (vertical and side-to-side)

This equipment is intended for use/transportation in stationary installations, fixed wing aircraft, and rubber-tired vehicle applications. It would likely fail in more strenuous uses, such as in a tank where more shock and vibration might occur.

Other procedures in MIL STD 810x call for different (both lower and higher) intensities of testing. Unless the advertising calls out a specific procedure and curve, the advertising is meaningless.

73, Hans, K0HB

Hello,

I originally purchased the equipment below for an amateur radio project, but I lost interest in pursuing the project. If anyone else would like to try their hand, or whatever, please be my guest. Phones are in good working condition far as I can tell. Would like to sell everything as a package. Serious offers considered.
TERMS: Prepayment by postal money order, prices include UPS ground shipping or USPS Insured where applicable. I will also consider trades for Motorola Star-Tac accessories such as a Motorola Star-Tac Desktop Charger(s), high capacity Lithium-Ion batteries (black), etc.

(1) DiamondTel Mesa 90X, in very good condition, with tabletop phone/spare battery charger, two standard NiMh batteries, car adapter, and instruction manual	$ 40.00
(1) Motorola "Flip Fone", lt. gray. This phone is in good condition with standard battery and tabletop phone/spare battery charger	$ 25.00

I also have the following accessories:

(2) used antennas, one "back of the set" antenna and a "window" portable, both rubber ducks	$ 5.00
(1) used battery eliminator for the DiamondTel 90X	$ 5.00
(1) Brand New in the package battery eliminator for the DiamondTel Mesa 90X	$ 10.00
(1) Brand New in the package 6V NiMh Lt. Gray battery for Motorola "Flip Fones", Micro-Tac, etc.	$ 10.00
(5) Brand New in the package 6V NiMh Black batteries for Motorola "Flip Fones", Micro-Tac, Flare, Elite, etc. (EACH)	$ 10.00
(3) Brand New in the package NiMh batteries for DiamondTel (EACH)	$ 10.00

If interested, please e-mail directly n3fvg@worldlynx.net Thank You

I don't think gear's price is cheap in Hongkong, especially foreigner.
Never go to Apliu Street in Kowloon side.

Good luck on your purchase.

73.

It all depends. I lived in Hong Kong for 7 years. There are at least 3 prices for every item sold in Hong Kong. The foreigner price (motive here is to rip-off the foreigner as much as possible), then the ex-patriate price (I have to live with you, so - reasonable price), and the Chinese price (you're one of me, so good price).

Amateur equipment is indeed much cheaper there, than here (So. California). However, you need to consider several things:
1) Quality of product (regular, gray, or black market)
2) Warranty coverage
3) Voltage capabilities (220 only?)
4) Duty

Considering the above, about the only way to really make a "killing" in Hong Kong is to live there for at least a couple of years, so that you have the "local" advantage, plus be duty-free.

I purchased a small, digital audio studio setup there for about 1/5 the cost in the US, but had the "advantages".

Also, in terms of where to shop, there are no really "good" places, or "bad" places to purchase, since virtually everything is relational.
Cheers,
WW.
Ventura, CA

Please accept this as the courtesy note it is meant to be.

Most users of these newsgroups have agreed on the following standards when posting sale or auction listings:

Please preface any auction posting with "FA:"
i.e. "FA: National HRO Coil."

Please preface any direct sale posting with "FS:"
i.e. "FS: Drake TR-4."

This allows those users who do not wish to see auction postings to set their filters and thus, not see them.

Thank you very much for your help with this.

You are right.

As far as I know, most items sold in Hong Kong is duty free. In addition, if you are a good negotiator, you will get a better price.

David:
Thanks for the information. I had just found these groups in December. I had been seeing FS and other letters ahead of listings and was trying to figure out what they ment such as WTB, WTD and most of them I could figure out. Sorry for any inconvienence to others in the group.

Jack

No problem at all- we're all "new" some time!
Welcome aboard! You'll find mostly great people
and a few, ummm... "rude" fellas. No doubt you've
probably heard from one or two ;-).
Good luck on your sale and
Kind Regards,
Dave S.

The only thing you may need to worry about is different AC
power requirements and warranty repairs.  This assumes
you will be bringing the equipment back to the states.

Just my $.02

I have been a regular visitor to Hong Kong for many years. Franly, on
most consumer electronics items, it is more a matter of availability
than price. The prices on most of it in Hong Kong are only marginally
better than the best prices in the USA. There are things in Hong Kong
that are much more available than in the USA.

Hong Kong is an unregulated market, and there is no shortage of
merchants who would shaft you, so make sure what you agree to buy, is
what you actually get, and it is at the agreed price.

What the hell are you talking about. I was converting two analog cell phones
to the 902 Mhz. Amateur Radio Band, I abandoned the project and am selling
the items in the project. Whatever hallucigenetic drug you are

taking...PLEASE STOP IMMEDIATELY, it is frying your brain!

Ham Radio University - HRU2000
Babylon Town Hall Annex
Phelps Lane & Miller Ave
North Babylon, NY
Sunday January 23, 2000
9:00 AM - 2:00 PM

This is a special day of education for amateur radio. Many ham radio Clubs and organizations from the New York City-Long Island Section will have information booths. This is your opportunity to meet the local clubs and organizations and learn their activities, meetings and membership. There will be a free tune-up clinic, DXCC & WAS card checking, eye-ball qso room, a full VE session along fifteen technical forums with guest speakers from the NLI section.

Donation: $2.00. Spouses and children under 12 will be admitted free.

For more information via Internet: http://arrlhudson.org/nli/hru2000.htm

Contact: Phil Lewis N2MUN (631) 226-0698

FORUM SCHEDULE

10:00 - 10:45 AM
Session 1A -Amateur License Restructuring - George Tranos N2GA
1B -Packet- John Papson WB2CIK & Bob Anderson K2BJG
1C -RFI & SWR - Sid Wolin K2LJH
10:50 - 11:35 AM
Session 2A -DX - Marty Miller NN2C
2B -APRS - John Blowsky KB2SCS
2C -YL Forum - Diane Ortiz K2DO
11:40 AM - 12:25 PM
Session 3A -Introduction to Contesting - Mel Granick KS2G
3B -Amateur Radio Satellites - Ken Ernades N2WWD & Bill Scheibel N2NFI
3C -QRP - Norman Wesler K2YEW
12:30 - 1:15 PM
Session 4A - Antenna(s) - Mike Kozma WY2U
4B - A.R.E.S. - Tom Carrubba KA2D
4C - Kit Building - Neil Heft KC2KY
1:20 - 2:05 PM
Session 5A - Tower Regulations - Mike Anderson N2TX
5B - QCWA - Herman Milatz W2TLC
5C - Purchasing Amateur Equipment - Phil Lewis N2MUN
******* VE 2:15 PM room 1A

Sure, I guess so. The charter which is posted monthly says for these newsgroups it should be radio related. Cell phones converted to 902 Mhz. Amateur Radio band are radio related. Cell phones in themselves are radio transmitters also. That should be explanatory enough, the bozo I responded to was bitching about my post saying it was "anti-scanning", I don't know what drugs he was using when he came up with that one, but they must have really been good. How converted analog cell phones for Amateur Radio is "anti-scanning", I'll never know!

Hell, every 903 rig in this area was converted from a cellphone, or uses a cellphone PA!

Watch the mags for a conversion article (it's in rewrites now, for publication later this year)

Hi;

Repair shops / tube audio gurus / radio buffs take a look!

One lot of tube shields for the 9 pin miniature tubes (12ax7,
12au7...etc) these are the twist-lock spring-loaded type used in

radio and tube audio gear.

There are over 300 in the lot and the current bid is $15.50. I have seen these go for over a buck a piece at hamfests and over $3.00 each on the net.

Stock up now!

Don't miss out on this one!

What mags should we watch for?  Hopefully they can be converted easy enough as
.5 watt radios on 900 will be pretty usless.

Tom,

I've worked on 100s, 200s, 220s and many other portables over the years. All of them can be a bear to work on if you are not experienced with working on portable equipment. Hey, the first time I worked on a piece of equipment with surface-mount stuff I cussed up blue streak (my language darn near desoldered the parts without the soldering station :)). Now, it is second nature.

I'll totally agree with you that most modern handhelds have poorer RF performance than the 70s vintage radios like the 220, both TX and RX. However, those "bells and whistles" is what sells radios.

Regards,
  Bill Bowen

Keeping animals out of your property (connotation with yobs ignored) ?

Until the builders moved in we had a field behind our house with some cows in it. Our back fence had a line of barbed wire on the top of it to deter said animals.

Why are there so few HT's with 220 MHz band???? Wasn't this a band where a couple MHz were taken away because of ham inactivity and a campaign by ARRL to use the 220 band freqs or lose 'em??????   I see a lot of dual band HT's (for example)with 144/430 freqs but no 144/220 HT's. Why is that?

I'm looking for the same info.  I just got my license a couple days ago.  I
have seen a couple reviews on the internet about the VX that it get's too
hot to hold during long-winded transmissions.  Specs make it look like a
great radio but what good is it if you can't hold on to it?!

I have an excellent condition SWR-121HF graphical antenna analyst.  This
is the best way to see what your HF antenna system is doing.
 The SWR-121HF features:
.Graphical display of SWR versus frequency from 1MHz to 31.999MHz.
.Compact battery powered for portability.
.Automatic SWR scaling for best results.
.Digital readout of SWR-at center frequency and top of plot.
.Display of return loss in dB.
.Keypad selection of center frequency and frequency increments.
.Auto battery-saver functions.
.Automatic centering of SWR null.
.RS-232 interface allows remote control, remote display, and saving
 of plots (optional PC software available).
.Internal beeper provides audible indication of SWR.
.Self-test and calibration functions.
IT includes the manual and a case.  $295 shipped.

> Why are there so few HT's with 220 MHz band?

There are a few available - both HT and mobile units.

Is there any 220 activity in your region? It may be your ideal "first HT."

The Standard C288a HT was MY first HT - and I still use it. I researched what was happening in MY region...joined a few amateur radio clubs...and made my HT buying decision after consulting with many others who were doing exactly what I wanted to do with ham radio.

Think about it, you do not find that much mobile or fixed equipment either. Part of the problem is the frequency is not that close to a

commercial FM band, so we do not have much good commercial
equipment to convert for 220 Mhz Repeaters.

Hi, Fred,

Back in the days when the Novice was limited to 75 W, that was 75 W DC input power, not RF output power. To comply, we measured the plate voltage and plate current and if it was < 75 W, we were under the limit. My 100TH homebrew rig had to be adjusted very carefully. :-)

One of the major factors in there being so little 220 gear is that there is NO 220 band in Japan. Since Japan has 2-3 times as many hams as the US the big market for 220 gear is not in the country that makes most of the equipment. And just how many US hams are on 220??? I own a 220 repeater here and I can tell you that there are less then 6 Hams on 220 in this area. No manufacturer wants to tool up for that small of a market. Now if we could convince Japan to open a 220 band we would have all the gear we want!!!! Maybe we should try to get TEN-TEC/MFJ to make 220 gear....<there is a Ten-Tec kit for 220>

Since 220 is the first band where Novices have any serious privileges this subject seems to relate to why there are so few novices.   But I can't tell for sure which way it goes.   Does the lack of novices reduce the pool of 220 users or the lack of 220 activity and gear simply discourage people from getting their novice license?

I think the TEN-TEC 220 Mhz kit looks wonderful.   Computer control and most of the features of any modern radio! If my kids had stopped at Novice I would have bought a couple of these. As it is, the greater privileges of Tech lured them on to complete the tech exam. However I do think the TEN-TEC 220 Mhz kit is pricy.   At $295 it didn't compare well to the Yaesu VX-5R that they both wanted so much, so off to the Tech bands they went!

Note that ADI makes a nice 220 mobile rig.   ADI/PRYME makes a 220 handheld, and Alinco makes another 220 handheld, so they are not non-existant.

With that kind of poor customer service, and with all the other
compitition out there, I think it would be safe to say, DON'T DEAL WITH
LAKEVIEW ANTENNA COMPANY! If enough radio enthusiasits take this
position, I'm sure it will hurt their business.

Pro Am antennas are easier to adjust.  You only have to do it once.

Piero:
Let me just say that if you want customer service, go with Larsen. Yes they will cost a little more up front, and they might not look as sleek as some, but you can't beat the warranty. 3 years. One time I called them and said I had a probem with a dual band rubber duck, they sent me a new one and said just destroy the old one, no questions. Another time I had a coil on a 5 year old antenna crack (yes, I told them I did not have a receipt and it was 5 years old), they still replaced it free. Larsen has great customer service.

Yes Doug, I do that now. I was not the one originally with the customer service problem, another person was, I was only replying to their post. I had a bad experience with Lakeview employees (owner?) at the 1998 Dayton Hamfest and I will never deal with them again! He was rude and ignorant. The others working behind the table said he was having a "bad day", but he didn't have to take it out on me.

Can anybody refer me to a repair shop in the Lynchburg - Charlottesville, VA
area? MY XYL and I want to get my father-in-law's old Yaesu FT-101B repaired
for XMAS on the sly and we need to secret it off to as local a shop as
possible. We're trying to avoid having to ship it anywhere.

PLEASE do not respond to this newsgroup or email address, instead respond to rolandman1REMOVE@aol.com but be sure to remove the word "REMOVE" first. :)

Need cash for the holidays? I'm an electronic musician looking for:

old synthesizers
keyboards
drum machines
effects processors
sequencers
vocoders
old modular patchable and analog synths.

Will consider anything by MOOG, ARP, Roland, Korg, Sequential Circuits, Oberheim, EMS, EML, PPG, Synton, Serge, Buchla, Polyfusion, Aries, Paia, Voyetra, Mutron, Bode or others. BROKEN OK. Will even consider parts units. I am most interested in older and more unusual items, particularly those which sound unique.

Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer
TR-909 Rhythm Composer
TR-808 Rhythm Composer
RSS Roland Studio System
E-mu SP-1200 sampling beatbox
Performer by Ionic Industries
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
etc

Please visit http://members.aol.com/rolandman1/index2.html for a better idea of what I am into.

If you have anything or know someone who might, please respond to rolandman1REMOVE@aol.com but be sure to remove the word "REMOVE" first.
Thanks in advance and happy holidays!

220 is such a fun band. I don't know if it's the chicken or the egg that
did it! (cost of radios, or, lack of use!)
In some instances, I think it's better than 2 meter fm.
It's a shame.  :(

Hi,

the real reason is that only in the USA and in no other country this band exists and because of this there are only a few hams who needs a equipment for this band, and because of the low number of hams who needs this, the industry do not develop these transceivers.

I have 2 units small Tron Tech Low Noise Amps, very small, sma
input/output - runs on 15VDC. Package is solid aluminum with mounting
screws, once used in cellular devices. Great 40dB gain !! Imagine uses.
These are pulls but work fine, Photos upon request Sell $125 each or
both for $200

Can be used with 900MHz video transmitters for extending range....

Sorry to say the demand isn't there. 220 is a neat band, but for some reason nobody in my area (Pittsburgh) uses it. Hell, these chumps don't even want to try 440!!! Sad, very sad.....

Hi :

Anyone out there know what I can do to get either a Heathkit compatible mike or how jerry rig another manufacturers mike? I need something that will work on a HW-101. I have everything to use the set on CW, I can't use SSB without a mike.
Was it a standard type of attachment comparable with a Kenwood or Yaesu?
Where can I get a copy of the HW101 manual or alignment step?

The Heath rigs require a high-impedance mic. The original Heath mic was made by Electro-Voice, and E-V sold one just like it with their mark on it. An Astatic D-104 will work fine (without the amplifier), as will a Shure 444D and similar Shure mics. Various Turner mics will work too, such as the 254C. I've used an amplified Turner Plus Three CB-style mic on an HW-101, but it picked up too much background noise and generated complaints from the listeners. Avoide low-impedance dynamic mics; not a good match for a Heath rig. Electret condensors won't work either.

73,
    Dean / K5DH

Do it and you'll probably be added to the list for spam.
Sounds like a great way to get up a mailing list.

But then they won't be secret any more. What fun is a list of secret
frequencies if everybody else has it? :-)

PLEASE do not respond to this newsgroup or posting address, instead please email me at rolandDELETETHISman1@aol.com but be sure to remove the "DELETETHIS" part first. :)

Broke from holiday shopping? I might be able to help.

I am looking for old electronic musical instruments and related items from the 1950's through 1990. OLD SYNTHESIZERS, keyboards, drum machines, MIDI modules, effects processors, vocoders and especially old modular patchable and analog synths. Any condition will do, BROKEN OK.

Moog
ARP
Roland
Korg
Sequential Circuits
Oberheim
Steiner Parker
Emu
Yamaha CS
Buchla
Serge
Aries
Paia
Polyfusion
Octave
Crumar
Voyetra
Digisound
Ionic
EMS
EML Electrocomp
PPG
Maplin

EDP
Mutron
Maestro
and others!

Also looking for:
Roland TB-303 Computer-Controlled Bassline
MC-202 Microcomposer
TR-909 Rhythm Composer
TR-808 " "
Compurhythm CR-78

The older and more unique, the more interested I will be.
If you have anything youd consider parting with or know someone who might, please email me at rolandDELETETHISman1@aol.com but be sure to remove the "DELETETHIS" part first. Be sure to let me know how much you want for it and what condition it's in as well. Thanks for your time, enjoy the holidays!

Here in the UK it's a bit like that with 70MHZ, gear is few and far between.
The one rig with 4M off the shelf is the Yaesu FT-847. All others use
transverters. Someone might think to design a transverter for 2M input and
220MHZ output.

I have problems with my HF vertical. I am using a Butternut HF-9VX, and my SWR is very high on 20, 17, 15, 12, and 10 meters. I have a ground rod down and radials down, but it the SWR is up at infinite. What could be the problem?

Bad connectors

Connectors not installed correctly

Bad coax

Wrong coax

Antenna parts corroded

Poor installation location

Ground ineffective

Matching system fried/defective

etc. etc.

I'm in no way a sky hook expert - but those are the places I'd start with

Good luck!

Ask yourself if you really have a problem. How does your antenna perform on receive and transmit relative to other antennas within your experience ? Or anybody else's antennas ?

Just because you are not happy with your SWR meter readings does not mean very much.

Howdy Mark.....I'd also like to know what you see for VSWR on the lower frequency bands, however, assuming that they might be bad as well, I'd suggest eliminating the feedline first......disconnect from the antenna, check for basic continuity end-to-end (use low ohms position of your meter....or at least a dc test light).....next check for a short or relatively low resistance path across the feedline (use high ohms position here and progressively go lower - keep your fingers OFF of the probes!). These previous tests are done with both ends of the feedline disconnected at the same time of course. If it looks ok with this simple sort of testing, then terminate the antenna end with a known-good dummy load and retest using your transmitter (low power) and VSWR meter or a through line type of wattmeter if you have one available. The wattmeter can be used at both ends in order that you might show up some major loss in the feedline (use the dummy load for this). If this STILL shows high then you have to decide whether its the feedline (coax) itself or a connector you've maybe put on OR...whether its a problem with the VSWR meter you're using (try a substitute unit if there's any doubt OR if using a wattmeter looks GOOD but the VSWR looks BAD). IF all this checks out, then its time for a good physical inspection of the antenna and installation and reviewing any notes regarding the history of the antenna and its installation (DID it WORK at any point....if it did then something failed.....DID it WORK at a previous installation? Was there any point in the installation that you felt you may have overrotated a joint or stressed a trap etc etc....being honest here might save you a pile of time).

Lastly a note on the installation, really without knowing how you've set up your radials etc.....DO NOT put your vertical up right next to your house (strapped onto it etc). Worse still, would be close placement to a metal sided building etc - I remember the grief I had, as a youngster, trying to get a much-heralded GOTHAM VERTICAL to "work" (Anyone remember THOSE heheh).

73 - Keep on Tinkering.....THAT......is REAL HAM RADIO

Hi All,

I've just got a real nice Trio TS520s + DG5 display.
I now want to hook this radio to my linear amplifier, but I need a plug
to fit the 8pin REMOTE connector on the back of the radio.

Does anyone know where in the UK or on the net, I can buy one ?

Happy new year to all.

73.

MikeT ...

The key was that you said it was off the wall on the bands. Sounds like the problem is in the feed line going to the antenna. Check for a short. For what it's worth, I have a vertical next to the house for space reasons and have worked 306 countries on it with good swr.

Gord Skiffington wrote:

> Howdy Mark.....I'd also like to know what you see for VSWR on the lower frequency bands, however, assuming that they might be bad as well, I'd suggest eliminating the feedline first......disconnect from the antenna, check for basic continuity end-to-end (use low ohms position of your meter....or at least a dc test light).....next check for a short or relatively low resistance path across the feedline (use high ohms position here and progressively go lower - keep your fingers OFF of the probes!). These previous tests are done with both ends of the feedline disconnected at the same time of course. If it looks ok with this simple sort of testing, then terminate the antenna end with a known-good dummy load and retest using your transmitter (low power) and VSWR meter or a through line type of wattmeter if you have one available. The wattmeter can be used at both ends in order that you might show up some major loss in the feedline (use the dummy load for this). If this STILL shows high then you have to decide whether its the feedline (coax) itself or a connector you've maybe put on OR...whether its a problem with the VSWR meter you're using (try a substitute unit if there's any doubt OR if using a wattmeter looks GOOD but the VSWR looks BAD). IF all this checks out, then its time for a good physical inspection of the antenna and installation and reviewing any notes regarding the history of the antenna and its installation (DID it WORK at any point....if it did then something failed.....DID it WORK at a previous installation? Was there any point in the installation that you felt you may have overrotated a joint or stressed a trap etc etc....being honest here might save you a pile of time).
>
> Lastly a note on the installation, really without knowing how you've set up your radials etc.....DO NOT put your vertical up right next to your house (strapped onto it etc). Worse still, would be close placement to a metal sided building etc - I remember the grief I had, as a youngster,

I had one of those antennae.

I found that the gap between the first and second sections (the one that has a solid tube plastic-like insulator) seemed to get black with dust etc. Cleaning it brought the SWR back.

Also, when I had first assembled it, the factory drilled holes were *NOT* in the right position. Measure everything again, step by step.
It's a very good antenna so it's worth persisting.
I left mine down when, after a storm, the mounting brackets had worked their way loose and allowed the antenna to fall, thankfully not on the neighbours kids!

�The antenna is designed to sway through about 60 degrees in high wind, and it puts a lot of stress on the mounting system
�

Best of luck

I am looking for a good 5" TV set for the car when I travel. Anyone buy any of these? I'm leaning toward a color one, but I would consider a B&W one if it's reception is considerably better than a color one. Anyone have any preferences or suggestions. Also, if there is a better newsgroup to ask this question in, please let me know. I've already frantically searched Dejanews.com to no avail.

FYI, the only ones I have seen are listed below, but I have no idea how good they are on their reception. I guess picture quality and reception would be my most important requirements.

Yorx 5" color PT1901 $149 from WalMart

Action 5" B&W $50 from WalMart

GPX 5" TVP9 B&W $55 from WalMart

Spectra 52-BWR-W B&W $49 from Walgreens

Thanks for any help or suggestions you can send my way.

Regards,

Curtis

Your data should almost answer your question. Believing you get what you pay for, I suspect the quality of the B/W sets are pretty comparable. You might check Consumers Reports for their input. You might look for features like batteries, ease of 12 volt plug in, etc. What you will find it is almost impossible to watch TV while in a moving car because of multipath problems with reception. Also the tv should be out of sight of the driver for obvious reasons...

I agree.  Looking at the throw away junk completely.  None of the brands listed
are
even "real" companies, but marketing names for some other firm.  Try finding a
local
warranty service station for any of the sets.

In any case, getting any kind of picture in a moving vehicle is nearly impossible
due
to the multipath distortion.
```

Hi there...

I am looking for some old electronic music equipment - old synthesizers, keyboards, drum machines, vocoders, MIDI stuff, any old patchable modular or analog synth from 1960-1991, BROKEN OK.

Will consider old Moogs, ARP, Roland, Sequential, Oberheim or others! Prefer knobs or sliders but will consider anything.

If you have something Id be into, please email me privately w price and condition. Thanks in advance!

For eg but not only:
Jellinghaus Yamaha DX-7 programmer box
Roland CR-78 Compurhythm
Con Brio ADS 100, 200 or 200R
Kinetic Sound Prism
Dimension DSDD-320 Spatial Chorus rack
Roland TB-303 Computer-Controlled Bassline
lots of other stuff Im looking for...

Sent via Deja.com http://www.deja.com/

HI Group!

I was checking out my HW-101 over the holidays and I have noticed some odd things.

I was loading up the xmtr using an indoor antenna and a tuner. I had a receiver located in another part of the house. When I keyed the mic, I heard my voice in the other room, but it was
full of 60 Hz noises.

I am using a 50K Yaesu microphone that I wired to the 4 pin connector. My voice is readable.

Since the rig is older than my oldest child, I wonder if the power supply filter caps are dying.
Any replacement parts out there?

Anyone have a similar experience, but found it not to be the PS??

Curtis Scholl

What sort of info were you looking for?

Canada is a separate country, so the FCC's changes in amateur licensing do not directly affect Canadian hams at all. I'd say that they do make it more likely that Canada will eventually drop the 12 WPM requirement for most HF access - either down to 5 WPM or entirely.
But this could easily take a couple of years.

A few months ago, Industry Canada *did* open up a few more frequencies in HF for use by hams with 5 WPM, but that was a relatively small change.

Dave

Hi Les,
Is the amp' still available, if so what part of Devon are you in.
Best Regards
Geoff G0BYH

PS Sent you a mail via one of the other news groups as well........sorry

Please do not respond to the posting address or newsgroup, please instead reply by email to rolandman1REMOVE@aol.com but be sure to first remove the word "REMOVE"

Happy Turkey Day :) I am an electronic musician seriously searching for old electronic music-making equipment from 1950's-1990. I will consider anything, working or even broken, in any shape.

Old synthesizers or keyboards
Drum machines
sequencers
vocoders
MIDI modules
effects processors (racks or stompboxes)
any old patchable / modular synth (full system or component modules)

Anything by Moog, ARP, Roland, Oberheim, Sequential Circuits Inc, Buchla, Serge, EMS, EML, Aries, Paia, Korg, Simmons, Mutron, Maestro, or others. The more knobs, the better. Especially into unusual items good for making strange sounds :)

If you have anything you would consider selling or trading or know someone who could, please email me at rolandman1REMOVE@aol.com but be sure to first remove the word "REMOVE". :) Please also be sure to include price, condition and location as well as your phone number if you'd like.

Thanks in advance!   Apologies if this message disturbs anyone.

Examples of things I am looking for:
Studio Electronics MIDImini or MIDImoog
Lexicon Jam Man guitar effects
Electro Harmonix Micro Synth / Bass Micro
Interesting filters, ring modulators, phasers, flangers
Roland Space Echo RE-501
Korg Stage Echo SE-500
RSF Kobol Expander II
Pollard Blue Syndrum
Roland MPG-80 Programmer for Super Jupiter
and much more!

http://www.laughingpoliceman.com   The LPWS working for the advancement
of amateur radio.

Greetings fellow radio enthusiasts

The Laughing Policeman Wireless Society, The premier club for wireless
telephony and telegraphy abusers in the UK and now the world.

Our 2 download sites are maintained independently so no copyright material
is kept on the LPWS web server. The 2 URLs are:-
http://members.xoom.com/BAJONES

http://members.xoom.com/g8arsehole

Both sites are identical, and either can be used to download the complete
Radio Ham featuring Tony Hancock, in a Zip file of a mono MP3 file, but we
suggest you buy the CD with The Blood Donor on it as well!

We recently added the TV news report of the Aylesbury repeater bomb, again
in MP3 for ease of download.

Go direct to our download page here:-
http://www.laughingpoliceman.com/free_downloads.htm

and don't forget the free LPWS email that we now operate entirely for and on behalf of our amateur radio friends and anyone else who wants to sign up. Don't worry, this is out-sourced so you can be sure it's 100% confidential.

Please report any errors and omissions to me and I will get them rectified without delay, and don't forget to email me with any further additions etc. complete anonymity if required. Thanks to all for the email, everything gets answered in rotation, I will get back to you in a few days. Our email is now directed straight to Kidderminster HQ from our LPWS server, so please contact the team by using g8aso@laughingpoliceman.com

LPWS Publicity Officer G8ASO   http://www.laughingpoliceman.com

LPWS is a non-profit organisation for the furtherance of amateur radio.

Hello,

I am hearing rumors that the licensing restructuring proposed by ARRL is about to be enacted on 1/1/2000. I don't want to debate the proposal, just find out if anyone knows about it. I have looked, but can only find info on the UK change. Any info would be appreciated!

73, Stan KB2WEN

Please email me if you know where to buy (anywhere in the world.)
few pcs of Motorola MC12080P or MC12080D prescalers.

Motorola has canceled this IC last year.

Many thanks in advance

Harri Jokela

could someone please let me know more info on the following Roberts radios:-

R309 4 band digital radio
R862 12 band world radio compact design
SRC985 3 band portable radio with single cassette

are they very good and what do they retail for?

email appreciated

regards

They're fine pieces of kit, albeit rebadged products of the Sangean corporation. Buy 'em on the net from www.purleyradio.co.uk

Original Roberts Radios are even finer, though. But I collect them so I
would say that.

Jim

The ARRL web site has a page or two with the current status of US Licensing changes. The Comment period for the proposed rule-making is over today, 12/1/99. I wouldn't expect any changes for a month or many more...

Only problem is that the cutoff date was 12/1/98, a year ago, not today!
We're still waiting. The last note that I read in the ARRL members-only
section a week or two ago was that there was optimism that the FCC would get
around to releasing a decision fairly soon (by year's end)?

ARRL ex-Pres W4OYI thinks announcement this month. Probably 2-class,
Technician and General - like W0HB proposed, not like ARRL proposal.

Still need CW to get on HF.

ARMS,

I assume you really meant K0HB (not W0HB).

My proposal did not call for Technician and General, but rather Basic and Advanced. In my proposal, the 'regular HF license' would be somewhat more difficult to qualify for than the current General class.

73, Hans, K0HB

II Proposal:

A. License Classes:

If the interest of the FCC is (as stated in the NPRM) streamlining of the licensing structure, then I propose that the license classes be reduced to two classes, namely "Basic" and "Advanced".

The "Basic" license would have an entry-level test (basic regulations, safety, operating procedures, basic DC and AC electronics). Without CW endorsement this class would have full frequency and mode priveleges above 30MHz, power limited   to 50W output.

The "Standard" license test would be of a difficulty level similar to the current Advanced class test, and would have full privileges above 30MHz at power levels up to 1500W.

B. Morse required for operation below 30MHz

Either license class could gain access to all MF/HF amateur radio frequency allocations (at 50W and 1500W respectively) upon passing a Morse test of 5WPM and gaining a "CW endorsement" for their operator license.

The Morse test should be "fill in the blank" or "1 minute of solid copy". Multiple-choice test formats should not be allowed.

C. Status of current licensees.

Current licensees should be redistributed as follows:

Current class	Converts to		
Novice:	Basic	CW Endorsed	
Technician:	Basic		
Technician+:	Basic	CW Endorsed	(Note 1)
General:	Advanced	CW Endorsed	
Advanced:	Advanced	CW Endorsed	(Note 2)
Extra:	Advanced	CW Endorsed	(Note 2)

Notes:

1) "Old" Technicians (who took same written test as General and 5WPM) would be "Standard" CW endorsed.

2) Current Extra licensees would continue to have that class printed on their license in recognition of their previous status.

On Sun, 28 Nov 1999 20:49:45 GMT, "Mike" <simkin@SPAMOFF.clara.co.uk>
opined thusly:

| I checked out the video and read the reports but still believe it would lead
| to serious injury. I guess they say it is not lethal to get it approved for
| sale. We have rellies coming to stay for Xmas from SA so I'll ask them if it
| has been used there yet.

I can see it giving rise to some expensive compensation claims if used
over here. :-(
How about fitting one of these satellite 'tracker' devices to the car?
Apparantly it can still be located even if the thief has hidden the
vehicle in a steel container (don't ask me how, but if anyone knows,
it would be interesting to hear how these work).

Nick in regard your question about "Roberts radios";
Saw something about these (I think) on < www.purleyradio.co.uk >
Just a suggestion.

:
: The "Basic" license would have an entry-level test (basic
:regulations, safety, operating procedures, basic DC and AC
:electronics). Without CW endorsement this class would have full
:frequency and mode priveleges above 30MHz, power limited   to 50W
:output.
:
: The "Standard" license test would be of a difficulty level similar to
:the current Advanced class test, and would have full privileges above
:30MHz at power levels up to 1500W.

Everythings fine, so far.

:B. Morse required for operation below 30MHz
:
: Either license class could gain access to all MF/HF amateur radio
:frequency allocations (at 50W and 1500W respectively) upon passing a
:Morse test of 5WPM and gaining a "CW endorsement" for their operator
:license.

I think the arbitrary 50 W limitation for Basic Operators on HF presents a problem because of all the HF rigs built for 100 W if the limit were placed at approximately 125 W then there would be much more 'legal' operation. This would also remove the additional burden from the 'newbies' of having to 'worry' about their power output in absolute terms all the time. Did you have some other reason for the 50 W figure?

There's a BIG difference between you telling me I'm not eligible to run a linear and you telling me I'm not eligible to run my rig. :-/

: The Morse test should be "fill in the blank" or "1 minute of solid
:copy". Multiple-choice test formats should not be allowed.
:
:C. Status of current licensees.
:
: Current licensees should be redistributed as follows:
:
: Current class   Converts to
: -------------   -----------
: Novice: Basic   CW Endorsed
: Technician: Basic
: Technician+:   Basic   CW Endorsed (Note 1)
: General: Advanced CW Endorsed
: Advanced: Advanced CW Endorsed (Note 2)
: Extra: Advanced CW Endorsed (Note 2)

Which test do I need to take to move up to Advanced?

: Notes:
:   1) "Old" Technicians (who took same written
:   test as General and 5WPM) would be
:   "Standard" CW endorsed.

What does "Standard" mean? I thought it was "Advanced"!

:   2) Current Extra licensees would
:   continue to have that class printed on their
:   license in recognition of their previous status.

Is the 'new' Advanced class eligible to be VE's?

I think the choice of keeping the name 'Advanced' is unfortunate it's too ambiguous (new to old) .

All in all, its a good plan. I like it.

I don't know about other people on rrap but I'm sure if the FCC were to ask
for another go-round on the NPRM tomorrow, my new set of comments would be A
LOT different from the comments I submitted in 1998!!!

Could it be the reason I like this plan is that it aligns so well with CEPT!
:^

CEPT is the reason that I believe a proposal like this could "fly".

Hummmm, this sounds almost EXACTLY like the system used in Canada.

Go to the URL below and down load the "RIC-2" document.

http://strategis.ic.gc.ca/SSG/sf01372e.html#Booklets

You will want to read sections 10.1, 10.2 and the "Schedule 1" chart near
the
back of the document.

I think you will find that the proposal above is nearly the same as the
current
Canadian license system. If I remember correctly, you must have the Advanced
qualification in order to build and operate your own transmitter, amplifier
and to
be the control operator of a repeater.

The selection of 50W was not arbitrary; it was deliberate. Beginners would be tested only on very basic safety and electronic concepts, and I consider 50W the upper limit of 'non-lethal RF'. Just as most HF rigs sold in Japan are limited to 10W, and there were many 75W rigs on the market back when Novice was limited to that power, there would soon be available a wide variety of 50W rigs here.

Ed,
I have serious reservations about using 50W on 2M with a trunk mount
antenna. Imagine the exposure a rear passenger is getting at 2' away.

(My Wayne Overbeck program says it's way over the limit) I realize that duty cycle helps a lot, but I still believe that there is more to the problem than "average heating RF". I believe that peak RF also plays a (currently unsubstianted) role in human cell reaction. I suggest no to hams who ask, no more than 25 watts in a mobile environment, unless the antenna is on the (metal) roof.

Rick T.

Set the limits at the RF exposure limits chart for conducting an evaluation. Then it is not arbitrary, unless those limits are arbitrary. That way you can save the RF exposure limits theory for the "advanced" exam, other than some simple RFE questions.

Deliberately arbitrary.

But when the Novice limit was upped to 200W, there were few or no rigs available at that power output.

That emitters in excess of 50W need to be evaluated for hazards.

In any case, if you don't like the proposal it's too late to convince me to change it. I sent it to the FCC over a year ago.

In other words, don't tell me, tell the FCC.

Can you really differentiate much between that and our present No-Code Tech ticket?   Many No-Coders simply memorized the answers long enough to pass the test and then have promptly forgotten them any how. Witness the many discussions on the local "CB" sounding repeaters on how to hook your rig, read handie-talkie, up to an outside antenna so that you can "get out better". Many of those folks don't have a clue and would burn their fingers if they ever decided to live dangerously and pick up a hot soldering iron.

Most of the rigs out there, if not all of them have a provision for controlling the output power of the rig. If the new ham cannot follow the rules and turn his rig down to meet the power limits he/she doesn't belong operating. When I was a novice we were limited to 75 watts on CW only. It posed no problem to us then as all you had to do was to use a reliable watt meter and adjust your rig accordingly. I personally see no reason for argument even as to the power limit as the rules now state that the maximum legal power limit is to use "only the amount of power needed for good communications". And there have been many made on 1 to 10 watts of power and even less.

I'm sure the same can be said for many Novice and Tech Plus licensees. The written test for no-code Tech and Tech Plus is exactly the same, elements 2 and 3A. The Novice class doesn't even have to pass Element 3A, only Element 2. That 5 WPM code test for the Novice and Tech Plus license does not guarantee any technical expertise whatsoever, unless you consider knowing how to adjust the pitch control on a code practice oscillator to be technical expertise.

On the other hand, there are no-code Techs like me who passed elements 2 and 3A without memorizing anything, in fact without having even seen a license study guide book, passing the test solely on the basis of knowledge gained through prior activities as an SWL and scanner listener. I learned how to solder 28 years ago...but unlike some people around here, I don't inhale the smoke.

73 and good DX'ing,
John D. Kasupski

Please can somebody post me a codeplug for Motorola Spectra analog A7
VHF model D43KXA7JA7BK , including valid .dbf file.

I have many of RSS for Motorola for exchange for that codeplug

please reply on E-mail:

nbg@eunet.yu

Hans:

There are two levels of written exam in Canada: basic and advanced. While the Basic exam may not be terribly difficult, I believe it is similar to entry-level licences in many countries, including yours.

Whoever told you we have "an "appliance operator" class,
without technical qualifications" misled you.

Look at the Radio Amateurs of Canada website www.rac.ca for more information.

:>50W the upper limit of 'non-lethal RF'. Just as most HF rigs sold in
Japan
:>are limited to 10W, and there were many 75W rigs on the market back when
:>Novice was limited to that power, there would soon be available a wide
:>variety of 50W rigs here.

Hello Hans...

Your choice of applying the 50 W to the MF/HF arena is purely arbitrary
(it's NOT based in fact). 200 W has been an accepted limit for decades, my
rig is an FT101 there're literally TONS of these rigs and others like them
in use around the world without any detriment to health and safety.

Bottom line is, yes absolutely, set power limits for the Basic license...

BUT, do it in a way that will not be telling all 400,000 existing operators
who are doing it safely on HF that they must take their 200 W limits and
move them down to 50 W when the rule is being implemented because of an
erroneous 'interpretation' of the exposure charts.

Fred wrote:

:Most of the rigs out there, if not all of them have a provision for
:controlling the output power of the rig.

That's true, Fred, I have no qualms about limiting power for various classes
on prescribed bands (when it makes sense). As it is now, we're ALL limited
to 200 W in many sub bands now. 30 meters for example is limited to 200 W
which is international in scope. Also, 200 W is the limit for ALL operators
in the "Novice" sub bands; this is national in scope.

: If the new ham cannot follow the
:rules and turn his rig down to meet the power limits he/she doesn't belong

:operating.

Goes without saying.

: When I was a novice we were limited to 75 watts on CW only. It
:posed no problem to us then as all you had to do was to use a reliable watt
:meter and adjust your rig accordingly.

No argument with that.

: I personally see no reason for
:argument even as to the power limit as the rules now state that the maximum
:legal power limit is to use "only the amount of power needed for good
:communications". And there have been many made on 1 to 10 watts of power
and
:even less.

No Fred, you forgot to mention there is an ABSOLUTE maximum of allowable
power for 'good communications'. Maybe that's why you see no reason for
argument. :^

What's the English legal position of a thief (probably recklessly...) breaking into a locked car that has a large dog within it, and said dog takes exception to the disturbance and gives the thief a good mauling? Is the thief solely responsible for the result of his crime, or could the dog/car owner be in any way liable?

If there must be an "appliance operator" class it should have NOTHING to do with the Amateur Radio Service.

I believe a service of the type we have with VHF FM marine radios for operation in our boats should exist for land/water mobile/base (recreational and commercial). I'm not suggesting this should be incorporated into the marine radio service; I just want another service simular to it.

Please, keep it FAR AWAY from the ARS.

Leland is correct, it is the same as the Canadian system.
I am not sure what you mean by an "appliance operator" or "technical requirements" but Industry Canada's Basic qualification (the lowest of the only

two classes Basic & Advanced) requires a 60% pass mark on an examination with 100 questions on :

BASIC ELECTRONICS

1 Understanding the basic relationships of conductors, inductors, insulators, DC, AC,EMF, resistance, power, capacitance, inductance, reactance, impedance, and resonance.

2 Be able to define Ohms Law and be able to do simple calculations using it.

3 Be able to describe the function of, a battery, a transformer, an AC power supply, and the basic blocks of a simple transmitter, receiver, and transceiver.

4 Be able to describe diodes, transistors, integrated circuits, and vacuum tubes, as well as the circuits for which they are used, and be able to describe their basic purpose.

PROPAGATION AND ANTENNA SYSTEMS

Candidates must be able to describe

Sunspots, sunspot cycle, solar radiation, ionosphere, fading, absorption, refraction,
radiation angle, multi-hop, mf/hf propagation, vhf/uhf propagation, transmission lines,
antenna types, antenna impedance, standing wave ratio, and matching devices.

The final two categories of question are:

STATION ASSEMBLY,
OPERATIONS, PROCEDURES, AND REGULATIONS
but have too many requirements for this email. see RIC 24 at Industry Canada's Web site
for more info http://strategis.ic.gc.ca/SSG/sf01862e.html

It's presumably the same as barbed wire on boundary walls - AIUI (IANAL) broken glass along the top of a wall where it is clearly visible is OK;

coiled barbed wire just inside it waiting to get someone who climbs over the wall is not. So on the same principle, if the dog is in the car and visible, then he probably gets what he deserves. If you have trained the dog to hide in a carton and when the moment comes it jumps out and savages the guy then you are in trouble.

My amateur radio license is scheduled to expire some time in 2000. How
do I renew it? Will the FCC notify me?

Kevin

It may or may not be arbitrary (depends on who is defining
abitrary). But it's my opinion, and I have proposed it to
the FCC. There is no point in trying to argue the case here;
you should be presenting your case to the FCC, not to me.

They make the rules.

No, the FCC will not notify you. You must fill out a 610 form and mail it
to the FCC. Also, there is a TWO YEAR grace period for expired licenses.

On Sat, 4 Dec 1999 17:11:32 -0000, Chris Wilson
<chris@formula3.demon.co.uk> opined thusly:

| What's the English legal position of a thief (probably recklessly...)
| breaking into a locked car that has a large dog within it, and said
| dog takes exception to the disturbance and gives the thief a good
| mauling? Is the thief solely responsible for the result of his crime,
| or could the dog/car owner be in any way liable?

In the circumstances you describe, there would clearly be no liability
on the part of the dog owner.

I am looking for a program called ISO.COM

It is a DOS based controller program for an AEA IsoLoop IT1 Tuner. I picked the antenna up at an estate sale but the program was not with it. If anybody could help, I would appreciate it. Thanx.

What is the legal position about using barbed wire fencing around domestic properties' gardens?

I have a paling fence at the end of my garden which kids used to keep climbing over, so I put barbed wire along the top. This hasn't completely stopped them, but the frequency of unwanted visitors to the garden seems to have decreased.

However, someone told me they think it's illegal to put a barbed wire fence up (unless maybe you're a farmer who uses it to keep livestock in a field). I assume this is because a burglar or one of these little angels could possibly risk tearing their clothes or injuring themselves by climbing into my garden uninvited. Maybe I have to put up a sign saying "Keep Out"?

I bought the wire from Wickes and it was sold as "garden barbed wire" - so if you don't use it for fencing, what are you supposed to use it for?

Any clarification on the legal position would be welcome.

TIA

Cyril

Dr OM/YL

This mail to inform You that the latest edition
of the OZ50MHz DX Bulletin #99-044 is now uploaded
at my website, at the adress;

http://www.qsl.net/oz6om/

From issue #99-039 the OZ50MHz DX Bulletin have
got a new design, some fetures in html are added.

Please have in mind that the OZ50MHz DX Bulletin
normaly is uploaded late Saturday evening (UT time)

Feel free to comment or bring up suggestion in the
guestbook at the page - thanks in advance ...

vy 73 de OZ6OM / OZ7M "Matt"

Hello,

I originally purchased the equipment below for an amateur radio project, but I lost interest in pursuing the project. If anyone else would like to try their hand, or whatever, please be my guest. Phones are in good working condition far as I can tell. Would like to sell everything as a package. Serious offers considered.
TERMS: Prepayment by postal money order, prices include UPS ground shipping or USPS Insured where applicable. I will also consider trades for Motorola Star-Tac accessories such as a Motorola Star-Tac Desktop Charger(s), high capacity Lithium-Ion batteries (black), etc.

(1) Motorola "Flip Fone" Gold Series, dark gray, in excellent condition with leather case, tabletop phone/spare battery charger, Standard NiMh and slim batteries .... $ 40.00

(1) DiamondTel Mesa 90X, in very good condition, with tabletop phone/spare battery charger, two standard NiMh batteries, car adapter, and instruction manual .... $ 40.00

(1) Motorola "Flip Fone", lt. gray. This phone is in good condition with standard battery and tabletop phone/spare battery charger ...... $ 25.00

The DiamondTel Mesa 90X and the Lt. Gray Motorola Flip Fone were purchased at a local Amateur Radio show from an individual who I believe was a tinkerer. It wouldn't surprise me if the two were cloned, but I have never actually used the phones. I purchased them for a Amateur Radio microwave project but never actually used them for the project.

I also have the following accessories:

(2) used antennas, one "back of the set" antenna and a "window" portable, both rubber ducks .... $ 5.00

(1) used battery eliminator for the DiamondTel 90X .... $ 5.00

(1) Brand New in the package battery eliminator for the DiamondTel Mesa 90X .... $ 10.00

(1) Brand New in the package 6V NiMh Lt. Gray battery for Motorola "Flip Fones", Micro-Tac, etc. .... $ 10.00

(5) Brand New in the package 6V NiMh Black batteries for Motorola "Flip Fones", Micro-Tac, Flare, Elite, etc. ....(EACH)$ 10.00

(3) Brand New in the package NiMh batteries for DiamondTel (EACH)$ 10.00

If interested, please e-mail directly n3fvg@worldlynx.net Thank You

Do you actually want to receive both signals simultaneously, if both bands are active? Or would it be adequate to listen to just one of them, as long as both frequencies are monitored for activity when both are idle?

True dual-receiver radios like the FT-51 will actually monitor two frequencies simultaneously, playing the audio from both. In the case of the FT-51, you have to set the "UHF" side of the radio to a VHF frequency, and it will do that - but its sensitivity is probably worse than the side of the radio specifically designed for VHF. That's likely true of most such radios with "V+V" receive.

However, I find hearing two signals simultaneously confusing, so I have my FT-51 set to "mute" - this kills the audio on the "sub" receiver if there is activity on the "main" receiver. So if both channels are active at once, the only indication I have of that is two green LEDs and two active signal strength meters - I can only hear the one signal.

And if only hearing one signal at a time is OK, any scanner and most single-receiver HTs will let you scan between two frequencies looking for activity.

Dave

alt.radio.scanner,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.scanner

Hi...I'm looking for a handheld scanner or amateur radio that has
wideband reception capability, and will let me listen to 2 frequencies at
once. Specifically, I want to be able to simultaneously listen to 2
frequencies in the 160 Mhz railroad band.

I have an Icom 2SRA, which can do this, but requires 2 antennas. I would
prefer a radio that uses only one antenna.

Some of the radios that I think might qualify are the Yaesu FT-51, ADI
AT-600, Icom W32. I'm also aware of scanners that have "dual VFO", but I
don't know if you can listen to both VFO frequencies at the same time.

Any advice would be appreciated.

The best dual monitor is the Alinco DJ-580! Twice meters + 440 + extended receive to 900 mHz. Absolutely stunning device will blow your freakin mind with it's massive storage and guess what, I just happen to have one for sale. No shit. This is your lucky day my man. 350.00 and it's yours!!

I know the Icom will because I have one. I think the FT-51 will too, and I think the Kenwood TH-79 will also.

We have some more 13cm ATV- Yagi's.

Specifications:

Elements	9.
Gain	10 dB.
VSWR	<1.5 at 2400 MHz
Bandwith	200 MHz..
F/B- ratio	14 dB.
Impedance	75 Ohm.

Complete with 75 Ohm SMA- connector.

You are interested....? Please e-mail me
for more details.

Don't buy a Argo II. This radio has a poor receiver. Also, as I found out the hard way, if the back lighting goes out on the panel, "wonderful" Ten Tec in their perfect wisdom refused to stock replacements. Needless to say, there is no more Ten Tec here. 73's Dick W5AK

Hi folks, need cash for the upcoming holidays? I am looking for old electronic musical instruments and other equipment from 1955-1992, in any condition, even BROKEN or parts:

```
SYNTHESIZERS or KEYBOARDS        (the more knobs and dials, the better)
EFFECTS PROCESSORS  (tape loop echos, filters, ring mods, freq shiftrs)
DRUM MACHINES                (electronic sounds, TR808, TR909, SP1200)
SEQUENCERS                                (with faders for each step)
MIDI RACK MODULES             (tone generators, synth racks, samplers)
VOCODERS                            (robot voice effect rack or keybd)
OLD PATCHABLE MODULAR OR ANALOG SYNTH        (arp2600, ms20, paia, etc)
```

MOOG, ARP, Sequential Circuits Inc, Oberheim, Roland, Korg, Buchla, Serge,
EML, EMS, PPG, Aries, Paia, Maplin, Steiner-Parker, Synton, Ionic,
Polyfusion, Voyetra / Octave Plateau, Yamaha CS, etc (ANYTHING SIMILAR)

For a better idea of things I am looking for, please drop by my website:
http://members.aol.com/rolandman1/index2.html

Please drop me a line if you've got something I might want or know someone who does. Be sure to include price and condition in your email. ***Please do not respond to this posting address, you should instead reply to rolandman1@aol.com*** Thank you in advance and apologies if this message pushes anyone over the edge! :)

Electronic Music Studio products, accessories, etc.
Lexicon Vortex Audio Morphing Processor
Harald Bode Frequency Shifter
E-mu SP-1200 sampling beatbox
Performer by Ionic Industries
Roland TR-808 Rhythm Composer

Sent via Deja.com http://www.deja.com/
Before you buy.

Hi Guys,
I turn to amateur radio once again for the answer!!! I am looking for a way to prob into a circuit which uses co-planer waveguide as th transmission medium. We would like to be able to calibrate using a VNA at the end of these probes, so that the reference plane is there. Our characteristic impedance is 75 ohms. Thanks for any help you can give.

73,

Stan

Hi Folks,

There used to be a way to send e'mail from packet to the internet and vice versa. I can't remember the packet address or WWW address. Can anyone help me?
Thanks in advance!

73,

Stan Cehonski   KB2WEN

Back in the days when only women wore earrings and men walked the surface of the Moon, the Motorola HT-220 was the hottest handheld on the market when it was introduced in 1969. Tougher than a pit bull, this VHF or UHF business band handheld in a weatherproof housing was the envy of ham radio operators for its compact size and performance.

The HT-220 Page has been updated and includes photos and discussion of special HT-220s such as the Secret Service, Medical ECG, and Touch-Tone models. This website has information including model tables, frequency conversions, parts and accessories, manual numbers, tech tips and stories.
See http://www.batnet.com/mfwright/HT220.html

Comments about the HT220 by visitors to this webpage:

"THOUSANDS STILL IN USE."
"I use both VHF and UHF models everyday."
"I've taken VHF units up to 220 MHz (a real 220 220)."

"HT220 is truly an object deserving of such a shrine!"
"It was and still is a engineering marvel."
"They are very easy to re-condition."
"I still think it is the nicest looking, most purposeful radio ever produced."
"The HT-220 still lives!"
"I cut my teeth on the HT-200 and went on to the HT-220."
"I can remember in the mid-70s the envy we all felt for the BMOC that had an HT220."
"What is that?!?" (from a generation X-er first seeing a HT220)

This is a great site!
I have several old HT-220 that I have always intended to convert them to
ham use.
Thanks for the information.

I have for sale:

1 - 10 channel SP50 (Motorola) VHF high Band with speaker mic, rapid charger and antenna. Some wear but good shape $250

2 - STANDARD HX580T(AA) portables with 4 batteries, antennas, DTMF pads, LCD display and 1 rapid charger, both seem to work fine. I believe they are trunking 800MHz. $400 pair

ALSO for sale

1 - MICROLOGIC Sportsman GPS unit with serial output and stand. Works fine. $150

1 - Pro-46, 100 channel unblocked scanner with antenna $150

1 - Pro-2036 base unit, perfect condition, dial tuning, WX alert and more $200

Have you ever tried to get hold of the software to re program Motorola or Kenwood rigs?

Its near impossible to locate software.. no body wants to help you.

Have you any idea where to go........... I have searched the web to no avail, seems like gold dust!!

You would think that the manufactories would help out a poor old radio amateur since we have been buying there black boxes for years wouldn't you?

All I get is "tuff " chuck it away!

Shame to chuck away nice little black box with such a silly mod to get it on 70cms.

Any suggestions?

Bob

Sorry, but if your rig requires programing, then it's not a Ham Radio
rig - possibly a hi-fi, a CB set or a scanner, but definitely not Ham radio.

Does this mean that your notion of amateur radio excludes adapting
commercial equipment for our purposes?

Using my Philips 2 m and 70 cm 'retired' PMR transceivers on amateur
radio frequencies isn't amateur radio, then, because they need to be
programmed by means of an external device?

Odd kind of logic, Old Man....

Cheers,
Ralf

No need to apologise, but when he has programed his rig to work on Ham
frequencies it will then be a Ham Radio.. :-)

I have three ex utility company two-way radio's that I have
reprogrammed, modified and tuned to work quite well on the UK Ham VHF
and UHF bands..

Many commercial rigs need programming for all their functions other than the ptt. Kenwood and Motorola are just two examples of rigs HTs that would require the programming to make them a Ham Radio and therein able to do some of the neat stuff. I know the local Motorolla guy here would probably do it dirt cheap.

Many commercial rigs need programming for all their functions other than the
ptt. Kenwood and Motorola are just two examples of rigs HTs that would require
the programming to make them a Ham Radio and therein able to do some of the neat
stuff. I know the local Motorolla guy here would probably do it dirt cheap.

Really - because it is not made by what is considered to be the normal manufacturers of ham radios is it not a ham radio? Wake up and smell the sunshine, amateur radio has been all about playing about with radios, even to the point of self construction. So the concept of utilising commercial radios that have been re-programmed to operate on ham freq's is nothing new. In fact I would argue that the re-utilisation of ex commercial radios for amateur radio useage is nothing new, it has been happening for decades!!!!!!!!. Maybe you are a pure black box operator but believe it or not some of us have actually tried experimenting with what is available - and I am not even a morse operator!!!!!!!!!!!

Have a look at the details on my home page for a few PMR to Amateur band conversions.

The URL is http://personales.jet.es/colinlowe/index.htm (Go to Ham Mods from the main page)

You will find info on the Motorola GP300 and GM300 plus the McMicro.

And for those who like the black box's there are a few wideband TX mods.

73 de Colin in sunny Barcelona.

Hi Mike!

Thanks for the reply.
I've been working with top mounted loading coils, but it would appear
that I now need some extra capacitance.
Now working on a capacitor hat affair aloft the loading coil.

I have 2 Chelcom HFV1 antennas, the one which is up at the moment is
excellent on 80/20/15/17/12m surprisingly!
Getting some great DX on all the bands with good SWR readings.

I've got some 300m of couterpoises burried under the small front and rear
gardens which improved things no end.

A 40m mast would be nice, but the neighbours probably woyldn't agree :)

Thanks for info, will keep all posted as to how it goes!

73

Hi Walt,

Thanks for your info ...

>He is not just a mere G3. He is also an American Extra Class
>licensee!

And hence should know better :_))

>Not on Top Band, you won't. For antennas physically less than 0.1
>wavelength long, the radiation resistance ... and hence the radiating
>efficiency ... decreases dramatically with decrease in frequency.
>This is why you have to run considerable transmitter power to radiate
>even a watt at the new VLF frequency allocations.

Hmmm interesting ... however I worked EX and 9K2 on 160m the other morning,
60w of ssb only ...
I know it will never be as good as a large wire antenna, but I only have a
small area to use :(

>Even an 8 ft loaded whip, on this basis, would have a radiation
>resistance of only about 0.1 ohm at 1.8 MHz.   Since the radiation
>resistance is so low, considerable current must flow in the circuit in
>order to dissipate any appreciable power as radiation. Unfortunately,
>in a helically wound antenna such as yours, the series reactance is
>very high - of the order of 8 kilohms or more - and so little current
>can be made to flow in the circuit except by applying enormous amounts
>of transmitter power. Furthermore, a significant proportion of the
>transmitter power will be dissipated in the helical winding as ohmic
>losses.

What would you suggest for 160m in a small garden Walt ?
I'd be most interested if there is something that I could construct that would be
more efficient.

Look forward to hearing from you ... and anyone else of course!

73 es gud dx.

Hi Chris!

>Are you saying that two 80m whips "in series" should resonate on 160m?

Well that is what it appears to do!

Not something I thought of I have to admit, the idea came from M1ACB,
Steve - an active HF spotter of mine :)

(I'm sure Steve will comment as he is following this thread with interest!!)

Adding just the 80m Proam whip, which I got 2 of for a tenner at a sale,
seems to
make the whole antenna system resonate at exactly 2.6mhz according to my SWR
Analyser.

>Quarter wave whips might <g>

Need some more capacitance now though :)

Cheers!

MikeT ...

If you said you had two, I would have told you to put them together as a
half wave dipole on 160m. It ought to be possible with some ingenuity in the
mounting.

hi Walt!

>Frankly, I don't think there is.   I have given up on 160m for
>precisely that reason.

I really like 160m though, so I will persevere, I might not get all the
DX I would like, but I sure will have a lot of fun trying :)

>You did well to work the EX and the 9K2. Your feeder must radiate
>quite effectively!

I was surprised too!
The feeder is just a mere 7m of RG213 coax plugged into an SGC autotuner,
so a 50ohm load is seen at the end of the coax so it shouldn't radiate much
from the coax.
The sgc is less than 6in below the antenna, about as efficient as I can get
for the moment.

Catch yuo soon!

Go check out Bill Myers Gladiator antennas.

Sorry but I do not have the URL to hand.

Try a search or a request on the antennas ng.

I have one of his 38' top loaded 160m antennas.

No loading coils and a raised 1/8 wl tuned radial system.

Math's goes out the window on top band. I'm afraid you have to get your
hands dirty if you want to down in the weeds when mobile.

My 160m antenna has a radiation resistance around 12.5 ohms, I feed it
via a 4-1 balun and final tweaking with switched cap's.

Ground loss is around 10 ohms though I have yet to measure this due to
lacking a bridge that reads high enough or the space to lay a 1/4 wave
wire out.

Tall, thin mast, large open spaced coil, 2/3rd's the way up and a v.
large capacity hat.

The only antenna which comes close is one of the better Screwdriver
designs. see W6AAQ's article.

Way to go.

Phil G4ZOW

Has anyone out there sent a sequence of radio pulses to moon and been able
to receive a similar sequence back after 2.45seconds?

Ralph, it happens everyday.  It is called EME, Earth Moon Earth and
practically the only way to work dx on UHF.

There you will find loads of projects documented projects including antennas, transmitters, receivers, PSUs and many many usefull circuits. PCB foil patterns are included for many projects and there are even photograph illustrations of the more recent projects.

I have recently included loads of freeware and shareware software packages for PCB drafting in the DOWNLOADS section. All the more recent PCB component layouts and PCB-foils are in BMP format so that everyone can read and print them (they are zipped).

Amongst the more recent projects added to the page are:
- TBA120 NBFM receiver - 100KHz to 100MHz, change two coils & crystal.
- Simple 4-watt AF amplifier - much better than the LM380.
- Extending the Balcony Antenna using Fractal & Meander principles.
- VHF digital direction finding system.

The site is well worth a visit. I hope you have fun - Harry SM0VPO

I have had loads of E-mail because the DOWNLOAD pages frequently give the error message FORBIDDEN when trying to get a ZIPped PCB foil pattern or datasheet from my homepage. Harry's Homebrew Homepage is lcated at:

http://sm0vpo.8m.com/
http://www.geocities.com/SiliconValley/3569/
http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo

The Passagen and Xoom sites (for Europe and the far East) have recently added banners to the INDEX file. When you click on another site (example http://sm0vpo.8m.com) then these servers import the files to their own server. Great! it's all free, but if you try to download a PCB foil pattern ZIP file you are accessing the site from an external site! This results in the message FORBIDDEN!!

If you want the PCB foils then copy (Ctrl+C) the URL and paste into the ADDRESS panel of your browser (Ctrl+V) and it will load the original site. You can then download to your hearts content.

I hope you have fun - Harry SM0VPO

Hi, I am looking for old electronic musical equipment from 1950-1990, in any condition, working or not:

-SYNTHESIZERS, keyboards
-Drum Machines
-Effects Processors
-Vocoders
-Sequencers
-Any old patchable modular or analog synthesizer
-MIDI gear

Especially interested in older and more unusual stuff. Anything that makes bizarre sounds. The more knobs, sliders or other controls, the better.

MOOG, ARP, Roland, Korg, Oberheim, Sequential Circuits, anything similar.

For a better idea of what Im looking for, please visit:
http://members.aol.com/rolandman1/index2.html

Please respond privately to rolandman1@aol.com (and not this posting address) with price and condition. Include phone number and location as well if you'd like. Thanks in advance.

Voyetra Eight polyphonic synthesizer module
Oscar with or without MIDI
PPG Wave 2.3
Yamaha TG77 Tone Generator
Casio VZ-10m Professional Digital Synthesizer
Roland System-700

Sent via Deja.com http://www.deja.com/
Before you buy.

HAMFEST October 24, 1999 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 24, 1999

LINDENHURST, LI - NY

On October 24, 1999 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Trying to repair TV but have unknown diode.
5G 20E 10 are the ident figures but I can't find it listed.
Does anyone know of a replacement number.

Thanks, G1DRY

I don't have a circuit diagram and beyond the fact that it looks like its in the psu but not HT I couldn't tell you. The diode looks like a 1N4000 series but fatter and is a diode not zener, a guy from the USA has emailed some specs, seems they know it there, but I can't match them up either. It's in a Matsui set that was sold here, a bit old now though.

Dr OM/YL

This mail to inform You that I have resently uploaded an updated
beacon list at my website covering a 50 MHz world wide in six
continantal splitted listings covering, Africa, Asia, Europe,
North America, Ocean/Pacific and South America. An worldwide
70 MHz list is added too.

These lists can either be viewed in html or downloaded as a ZIP
file in band pacages, the ZIP�ed version contains a bandplan aswell.

These can be found at http://www.qsl.net/oz6om/

I hope You find the listings of use ...

vy 73 de OZ6OM "Matt"

Attention Musicians: I want to buy your old electronic musical equipment and recording gear, DEAD OR ALIVE. Looking for the following items from 1952-1991, in any shape or form:

SYNTHESIZERS or KEYBOARDS (knobs/sliders/patchcords a plus)
EFFECTS PROCESSORS
DRUM MACHINES
SEQUENCERS
MIDI RACK MODULES
VOCODERS
ANY OLD PATCHABLE MODULAR OR ANALOG SYNTH, system or component modules

M*O*O*G, A.R.P., Sequential Circuits Inc, Oberheim, Roland, Korg, Buchla, Serge, EML, EMS, PPG, Aries, Paia, Maplin, Steiner-Parker, Synton, Ionic, Polyfusion, etc (ANYTHING SIMILAR)

For a better idea of things I am looking for, please drop by my website:
http://members.aol.com/rolandman1/index.html

Performer by Ionic Industries
Roland TR-808 Rhythm Composer
Jellinghaus Yamaha DX-7 programmer box
Roland CR-78 Compurhythm
Yamaha CS-80 back-breaking monster keybd
etc....

Please email me privately if you have something you would consider selling or know someone who could. Be sure to include price and condition as well as your location and phone number if you would like as email is sometimes less than reliable. ***PLEASE DO NOT REPLY TO THIS NEWSGROUP OR POSTING EMAIL ADDRESS. rec.radio.amateur.homebrew,rec.radio.amateur,rec.radio.amateur.misc,rec.ham-radio

I'm in search for detailed plans for building a 10 meter transmitter capable of SSB and CW modes with a power output of, say, 2 to 20 watts. A VFO would be preferable.

I see that Far Circuits (http://www.cl.ais.net/farcir) supplies pcb's for two articles in 73's mag. The first is Feb '91 for a 10 meter 'SB' transmitter. And the other is July '92 for a 10 meter DSB transmitter.

As I don't have access to these back issues of 73's mag., I can't evaluate these designs.

I'd be most willing to send you a few bucks in return for you sending me a copy of the plans.

Oh, no license yet, but very soon. I'm also quite experienced at electronic construction, including R.F. stuff.

I will be using a Drake R8B for the receiver.

You can contact me via. email at: lawrence@javanet.com

Regards,

Larry Gruber

Medford, MA

Dr OM/YL

This mail to inform You that the latest edition
of the OZ50MHz DX Bulletin #99-043 is now uploaded
at my website, at the adress;

http://www.qsl.net/oz6om/

From issue #99-039 the OZ50MHz DX Bulletin have
got a new design, some fetures in html are added.

Please have in mind that the OZ50MHz DX Bulletin
normaly is uploaded late Saturday evening (UT time)

Feel free to comment or bring up suggestion in the
guestbook at the page - thanks in advance ...

100's of winter projects at Harry's Homebrew Homepage http://sm0vpo.8m.com.

I have done a lot of updating recently and included a 4-watt AF amplifier as well as coil-winding using PCBs so that anyone can wind the same coil! Not an easy task, remember Harry's laws?:

1 - No two people can wind the same inductor with the same instructions and materials.
2 - Coil winding data is a constant that varies from person to person.

Of course, the article is illustrated with photographs of a 20uH inductor (+150pf = 4MHz).

There are loads of antenna projects, transmitters, receivers and even a little booze, if you think "homebrew" has another meaning.

I have my own message board which is in daily use by home constructors with problems or suggestions. If you could help to answer some of the questions there I would be eternally gratefull.

Dont forget to look at the high-powered "bug" (FM Wireless Microphone) that does not need coils wound. Even the FM receiver does not use coil-winding.

Very best regards from Harry - SM0VPO

I have a number of P100 UHF transceivers for sale.All with antennas and batteries. Some batteries are not so good and need replacing. I will have possession of all within 1 week

The unit I have now is a P100 UHF, 2 channels showing, channel selector has 14 positions. Battery is weak, no charger with this unit, but has antenna and external belt clip with strap. 9/10 cosmetic condition. Make offer

I will post ALL remaining radios (6 more) soon, they all have batteries, antennas and a few standard chargers.

Forwarded from John Callas (John.L.Callas@JPL.NASA.GOV)

Dear Radio Amateurs,

Once again I apologize for giving you late notice. We have scheduled another test of the Mars Relay on the MGS spacecraft in orbit around Mars. The test will involve the 46-meter antenna at Stanford University in an attempt to hear the Mars Relay. The Mars Relay will be turned on at

1999-11-03 19:25:00 UTC (spacecraft event time) and turned off at 1999-11-05 05:01:00 UTC (spacecraft event time). Between those times, the Mars Relay will be in various FM modes, but with a portion of the time in CW mode. The Mars Relay broadcasts at 437.1 MHz with 1.07 watts of power into right circular polarization. The antenna gain on the Relay varies as the spacecraft orbits with the peak gain expected to be around 0 dBi. With the spacecraft at 230 million kilometers, this will be a very weak signal. As before, we would like to ask the support of all amateurs in the San Francisco Bay Area and to refrain from transmitting near 437.1 MHz between 1999-11-03 19:50 UTC to 1999-11-04 04:40 UTC and between 1999-11-04 19:50 UTC to 1999-11-05 04:40 UTC (when Mars is in view from Stanford). In the past your assistance has been invaluable and has made previous tests very successful. As always, we appreciate the support and interest of the radio amateur community. This has allowed us to advance the use of UHF for relay communication at Mars. Thank you for all your help.

Sincerely,
John Callas

I just passed my technician class exams and would like some info on purchasing a radio.

I want to purchase a good newer model HT. I have done some looking around and am planning to purchase a Yaesu VX-5R.

I would like to know if anyone has had any experience with this radio.

Are there any problems with it, is this "too much" radio to start with, etc.

Any suggestions/info would be much appreciated.

thanks in advance.
Greg Varnadoe

I have a mint TM-731A dual bander I'd like to sell. Has the CTCSS board
installed. Has only been mobile a few times, used mostly in shack. Has
all the org stuff with it ie: mobile mount,manual, mic etc. Its been
modded for mars and cap :)...with the tone board installed works great
for private cross band repeater.. Like to get 275 to 300.
thanks Mike w0zpy

Mike,
Does this radio have 800 Mhz?...
I am interested in the radio will you take $250?
Thanks

Russ

Looking for the following old electronic musical equipment from 1960-1990, in any condition, broken OK:

synthesizers
keyboards
drum machines
sequencers
effects
MIDI equipment
old modular patchable analog synths

I prefer older analog stuff with plenty of knobs but will consider anything, especially if it's unusual.

For a better idea of what I'm into, please visit:
http://members.aol.com/rolandman1/index2.html

Pearl SY-1 Syncussion electronic drum module
PPG Wave 2.3
Roland Jupiter 8 with or without MIDI
Roland MC-202 Microcomposer
Roland Space Echo RE-501 or others
Roland System-700

If youve got anything or know someone who might, please email me at
rolandman1@aol.com and be sure to include price and condition. Thanks
in advance, sorry if this message bothers anyone.

Hello

The new updates of the callsign and aircraft database are already available
for download at

http://www.airnavsystems.com

followed by the data files link.

These updates were only possible with the important help of many AirNav
users.

Best regards, Andre Brandao

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc. Please e-mail directly to n3fvg@worldlynx.net if interested.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes.........$ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes............$ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY..$ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual..........$ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used...$ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition........................$ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual..$ 100.00

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used...$ 260.00

(2) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never used..$ 25.00 each

KENWOOD MC-52DM microphone, 8 pin din, back-lit ttp, brand new in original wrapper, never used...................................$ 30.00

DIAMOND MX-214 Duplexer (2M/220)................................$ 45.00

MOTOROLA Montana 33.6 PCMCIA Cellular 33.6 Modem/Fax with cable for connection to Motorola Cellular Phone (Tenatively Sold).........$ 25.00

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I wouldn't try it. Probably handles 300 watts, in box..............$ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed,
3 on same frequency, 1 on different frequency. Easily re-crystalled.
With rubber duckies and plug in chargers................$ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed, with drop in charger...$ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS ground shipping.

Are repeater frequencies assigned by the FCC or is it up to the individual repeater owner to find an open frequency?

Is there a frequency registration process that secures an individual a repeater frequency, thus prohibiting others from using the same frequency?

Is there a website that describes the Part 97 rules pertaining to repeater operation, licensing and registration?

Any assistance would be appreciated.

Thanks Guys

The freq's are set by the area repeater coordinators not the FCC.. You must not be a ham ,as all know that one, it's in the test...

Has anyone got a copy of the schematic for the Zycomm FM9000? (or just the component layout)
Jim

Hmmm, that sure is news to me and I'm sure the frequency coordinators as well as the FCC!

I don't know the guys reason for asking for help, but at least we could try to supply truthful answers. This is as far from the truth as you can get.

Being involved with radio both in the amateur spectrum as well as commercial for a few years, I tend to keep pretty close tabs on the rules. I don't claim to know it all, but I do have my faithful resources to fall back on when I don't know the answer.

Maybe this was due to your view of things, I don't know, but if you were playing Hollywood Squares, and he agreed, he'd not get the square.

Many years ago when FM repeaters were getting popular the Ham community (especially supported by the ARRL and other organizations) developed a "band plan" for the VHF and UHF frequencies. These were "gentlemen's agreements" and have been modified several times as the usage grew and technology improved. In recent history, the FCC has tended to support these plans and has pretty well supported the decisions made by the volunteer coordination councils even though they are not directly authorized by the FCC. The "standard" repeater (and simplex) frequencies are published in several books and I suspect can be also found on the www... try the ARRL web site <http://www.arrl.org/>... for one. If you want a repeater frequency you apply to you local coordinating council (contact the ARRL via Email; they can tell you who to contact). If there are any available frequencies you will be assigned one. Some bands are pretty full up right now though, especially 2 meters. I think you may be able to read the Part 97 rules on the FCC's site <http://www.fcc.gov/wtb/amateur/>

One word, because frequencies are not assigned by the FCC directly, you cannot guarantee no interference even if you are assigned a frequency. First, due to the demands for frequencies there may be other repeaters on your frequency a few hundred miles away which under some conditions you may hear. Second, amateurs between you and the other repeaters may inadvertently bring up your machine while actually working the other repeater. Third, in the case of malicious interference it is a long process to document the problem and get the FCC to react due to their limited enforcement staff. They have taken action in several cases but many others still exist. I guess the system is not perfect. 73 Bill

Howdy,

You are invited to my non-commercial, sometimes boring, hopefully useful, and always-undergoing-updates website. The URL is http://hfradio.org and features:

- DX information, including QSL Route/Manager Lookups and Callbook Lookups
- Propagation Center including the eAlert service (allows you to sign up an email address to the automated email propagation reports)
- Equidistant Azimuth Map software (allows you to create maps of any QTH)
- Swap and Shop
- Bookstore (I've hand-picked over a thousand book titles on radio, etc.)
- Free website space for YOU to create your own Ham or SWL site

There's more. Easy to navigate. Open for suggestions. And there's no "light left on for ya" -- since there's no need for a light. If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Hi to all-

I have an R7 that is a little better than a parts radio
but is missing a couple of majot components.

I am looking for a dead R7. Rusty, water damaged, lighning
damaged (if bandswitch is OK) or ...

I need the complete bandswitch assembly.
The PTO buffer/Audio board
The 5, -5, 10, 35V regulator board.
Some of the little pushbuttons.
A meter.

Please write and let me know what you have.

You needn't worry about embarrasment. I won't poke public fun at you or your radio. Private maybe :-)

-bob

Paul:
Ask around. There is probably a frequency coordinator in your region. Apply for a pair through that group. The FCC does not assign individuals or organizations frequency pairs but rather leaves that up to the coordinators and individuals good judgement. Do not and I emphasize DO NOT put a repeater on the air without going through this process. If your interfere with a coordinated repeater and fail to resolve the problem, then the FCC may get involved and order your repeater off the air. The anguish is just not worth it.

Good luck on your project and 73's...Dick...K7RNZ

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc. Please e-mail directly to n3fvg@worldlynx.net if interested.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes.........$ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes............$ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY..$ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual..........$ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used...$ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition........................$ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual..$ 100.00

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used...$ 260.00

(1) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never used....(one sold - one left)..................................$ 25.00

KENWOOD MC-52DM microphone, 8 pin din, back-lit ttp, brand new in original wrapper, never used..................................$ SOLD

DIAMOND MX-214 Duplexer (2M/220)................................$ 45.00

MOTOROLA Montana 33.6 PCMCIA Cellular 33.6 Modem/Fax with cable for connection to Motorola Cellular Phone (Sold)....................$ SOLD

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I wouldn't try it. Probably handles 300 watts, in box.............$ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed, 3 on same frequency, 1 on different frequency. Easily re-crystalled. With rubber duckies and plug in chargers...............$ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed, with drop in charger...$ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS ground shipping.

I have an ALLIANCE A300, 300VA UPS for sale, just put new battery in
unit, I will sell for $75 plus shipping

ALSO:

2 working, but bad NiCd, Biosystems, PhD Ultra muliple gas
detectors.Follow below link for more info. I have one dead battery
between the two, they have Hydrogen Sulfide, O2 and Explosive modules
installed plus room for one more, each with belt clip
http://www.biosystems.com/detector/multi-gas/phdultra/phdultra.htm

I will sell for $500/pair

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling 1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea. (May issue is missing page 73)
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.
If you would like to check my references, please feel free to do so. I am on Ebay and my user ID is: Andrew45

Greetings

We have just had a meeting at LPWS headquarters in Kidderminster, and we are undecided as to what direction to take our web site in. The general view is that it has been far more popular than we ever though possible, but we want to add new features.

Charles Penrose wants to get rid of the FRAMES to get better search engine listings, and we agreed to that. What we need is your input. We already list many links to hard to find resources, and cracks and passwords for your ripped off software. What else can we do for you?

Coming soon, old RAE papers! Subject to C&G approval, if that is not forthcoming they will be up on an alternative site and linked from http://www.laughingpoliceman.com

We are waiting for your input, hit reply or click here g8aso@hotmail.com

70 Trees G8ASO

Hi there, I'm looking for old electronic music-making equipment from 1950s-1990, in any condition, working or not working. Parts too:

SYNTHESIZERS & KEYBOARDS (Moog, ARP, Roland, Korg, Sequential Circuits,
                          Oberheim, EML, EMS, Buchla, Serge, PPG,
                          Digisound, Ionic, Yamaha, etc)

DRUM MACHINES (Roland TR-909, TR-808, TB-303 Bassline, Simmons, etc)

EFFECTS PROCESSORS (tape delays, flangers, phasers, frequency shifters)

VOCODER   (robotic voice effect)

SEQUENCERS   (anything with knobs or sliders)

MIDI TONE GENERATORS

ANY OLD MODULAR/PATCHABLE/ANALOG SYNTH (ARP 2600, MS20, Big Moog, etc)

The older and more unusual, the better. In general, I prefer things with lots of knobs or dials but will consider anything, especially the unique.

To get a better idea, please go
to:http://members.aol.com/rolandman1/index2.html

Please email me privately at rolandman1@aol.com if you have anythingI could
be interested in or if you know someone who might. Be sure to include price
and condition. Thanks for your time, sorry if this message annoys anyone.

Roland Jupiter 8
Voyetra Eight polyphonic synthesizer module
Oscar with or without MIDI
PPG Wave 2.3
Yamaha TG77 Tone Generator
Casio VZ-10m Professional Digital Synthesizer

Hi

I've just acquired a Sommerkamp TS-800DX CB.
At least I assume it was originally a CB as it covers the EU channels on FM.
It also works on receive on the 10m band. 28 to 29megs on AM, and 29 to
29.7megs on FM.

Has anybody got any information on this radio, instruction book, diagrams, mod info? I'm certain this set is capable of loads more than its letting on, and might be a very handy little mobile for 10m FM.

cheers
Jack

I've got to quit reading news groups at work when people qup like this. Everyone looked over to see what I was giggeling at. :)

>
>I am able to receive the neighbor's baby monitor on 49 but the baby
>doesn't QSL.
>

Furthermore, I'd be tempted to transmit and see if the other end would QSL when you suddenly came over the baby monitor.

Anyway, I would like to do some 6 eventually too - I have an all-mode 2M now - and have been looking at Ten-Tec's transverter. If any one has any experience with this, I'd love to hear about it. My 2M rig is a Yaesu FT 290R MK II. I'd like to hear from anyone who has put a transverter on one of these radio's too.

Is there any activity on 6M AM? I would think that most (all?) long distance activity would be CW or SSB. I've seen a number of old 6M AM units for sale cheep, but have stayed away because I assume (always dangerous) that there is no AM activity.

73, Ken
KD7FLE

I am interested in connecting my "Sony Dream Machine" clock radio to my local cable company's feed. Radio Shack has the adapter that converts from coaxial to RF. The problem is the clock radio only has a single loop antenna (one wire comes out of the unit) whereas the cable adapter requires a double wire connection.

Is there anyway to get around this problem without purchasing a new radio?

thanks,

Dave.

You CAN use only one side of the adapter and it will still work.

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc. Serious offers considered. Please e-mail directly to n3fvg@worldlynx.net if interested.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes........ $ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes........... $ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY....................................... $ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual......... $ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used.. $ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition....................... $ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual.. $ 100.00

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used... $ 260.00

(1) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never

used (tentatively sold) .... $
25.00

DIAMOND MX-214 Duplexer (2M/220)................................ $ 45.00

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I
wouldn't try it. Probably handles 300 watts, in box............. $ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed,
3 on same frequency, 1 on different frequency. Easily re-crystalled.
With rubber duckies and plug in chargers............... $ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed,
with drop in charger.. $ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS
ground shipping.

Something else to consider Ken, why not start a group in your area that meets each weekend or whenever to operate a little 6m AM, before you know it the Heath Lunchboxes will get dusted off, guys will wire up mics for their old Gonset rigs and you'll make your own 6m activity. I've worked a couple locals but am thinking of doing the same thing.

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling 1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped). If you are interested in over 12 issues or the entire collection, make me an offer. I am willing to ship anywhere on this planet so long as you are willing to pay the shipping costs.

Here are the issues that I have remaining:

QST

[1992 through 1998 issues are $1.00 each - 1999 issues are $2.50 each]

1992 Jan Feb Mar April
1993 Jan Feb Apr May June July Aug Sept Oct Nov Dec
1994 Jan Feb Mar Apr May June July Aug Sept Oct Dec
1995 Jan - Dec

1996 Jan - Dec
1997 Jan - Dec
1998 Jan - Dec (May issue is missing page 73)
1999 Jan Feb Mar Apr May June July Sept Oct $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers.
Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less
a few months still available.
If you would like to check my references, please feel free to do so. I
am on Ebay and my user ID is: Andrew45
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=andrew45

I don't recall hearing you on the air. I'm located in Madison Heights MI (14 mile road and Intrastate 75). I have a Yaesu FT-847 I just got new and I am working on a 6m antenna. The problem I have is that I live in a ground floor apartment with zero outside access like a balcony etc. So currently I work just 2m and 70cm using a high gain (4.5 dbi on 2m and 7.5 dbi on 70cm) vertical antenna inside the apartment. When I'm on the air I'm talking with a few other friends on the Southfield repeater (146.820MHz, negative offset and a pl tone of 131.8 Hz). Sometimes you can catch me on the Detroit repeater (444.000 MHz positive offset and no pl tone required). The Detroit repeater I have keyed up with a received signal of S9 as far north as Oxford MI. I'm on the air normally around 5:30 PM, during the week, either at home or operating mobile on my way to night classes at LTU located at 10 mile and Northwestern Hwy.

Some of the other people you may know are Larry KC8GTR (my brother), Bill KB8UFQ, Harold KC8GTS, Greg KC8KRR. My brother is looking for some 6m activity too.

73's,

Leland C. Scott

Hello

New links were just added to the Live Aviation page.
There you may find Real Audio airband communications, realtime airport
information and airport Webcams.
It is available at:

http://www.airnavsystems.com/live

Hope you find them useful.

Best regards, Andre Brandao

I have a Galaxy 3 with Matching Speaker/PS and mic. This is a
tribander SSB tranceiver. 20-40-80 Meters. Output is 180 Watts. It is
in very good condition. Have jpgs if you like. It's clean inside and
out. It would make a great standby rig.
$175+shiping.

Hello

A new software shareware of count of Qth locator under Windows98 (version 32bits).
The software permits the count has the aide of Qth locator or some geographical coordinates the position of a
station. He gives like results: the distance, the azimuth of the antenna,
the geographical coordinates, the QTH Qth locator, the country, the city.
One could see on a geographical map, the position

of the station with possibility of zoom. He possesses a data base also with
all
the capitals, and country of our old planet as well as the prefixes of the
radios amateurs (possibility
of modifying this data base)
You could see the software and download the version shareware has the
following address:
http://f1usc.click2site.com/

To soon
All the Best, 73's

Hi!

Thanks for reading this.

I have a "Spare" Checlcom HFV1 80m vertical which I am trying to get to
resonate on 160m
(For those who do not know it's an 80m vertical which is helically wound,
almost 1/2 wave length
on 80m, wound around a fibreglass former, normally tuned against ground to
form a 1/4 wave antenna according to
Chelcom)

My initial attempt involved adding an PromAm 80m mobile whip to the top,
To my amazement it immediately resonated at 2.6Mhz against my extensive
ground
system I have in place.

Excited by this I thought that to make it resonate on approx. 1.845mhz I
would need to add more wire to the top of it,
so I kept on making the top section longer and longer, however I seem to
have reached a point where
no matter how much longer the wire is I cannot get the point of resonance
below 2.5mhz.

Can anyone shed any light on this for me ?
I don't understand why I can't get it to resonate below 2.5mhz.

I'm probably missing something I learnt many years ago when I took my
infamous G1 RAE test,
so can someone help me here ?

Thanks!

MikeT ...
M0AWS

Sorry to be dense, but could you explain why you want it to resonate nearer to the operating frequency? Did your RAE test course suggest that antennas perform better when they are self-resonant at the operating frequency?

Forget resonance and just enjoy your helically wound dummy load :-)

Regards,

You've obviously never used a Chelcom HFV1, hence your somewhat
dense reply!

Not all of us have the acreage required for large wire antennas, however we
are still able to enjoy our hobby using small, helically wound vertical
antennas,
which I hasten to add, perform almost as well as many large wire antennas.

The idea of getting it to resonate at the desired freq is so that I can have
a more efficient antenna system at the required freq without the losses of
an ATU,
surely a G3 would know about such things, or are you G3's not as clever as
you make out ?

As for it being a dummy load, far from it dear boy, perhaps you should try
one.
I know you'll find it hard to believe, but even a G3 can work DX on a
helically wound antenna,
that is, along as you're intelligent enough to work the transceiver in the
first place!

I believe that you are mistaken on a number of accounts, but as I
can't rise to your level of personal abuse I'll leave others to help.

Hi, I've got a TR-4C, MS-4C, AC-4C for sale. The radio is serial number 34886. The radio might be a 9 out of 10. I never cared for that numbering system much so I have pictures available on the radio and speaker/supply. There is a scratch on the right side of the MS-4.It works great and I use it all the time you can hear it on the air any time in the evenings or Saturday morning, (depending on your location). E-mail at swb1@flash.net for pictures. I'm asking $400.00.

I would consider a trade for like value equipment

Thanks

Steve KC5TFL

The 80m vertical is quite good for its size. To get it to work on 160m, you could put it on top of a 40m pole. I assume that is not possible - leaving top loading or base loading. Top loading is better but possibly impractical so it looks like a big ciol at the base will be needd. With a nice wide spaced relay yuo could make it dual band by shorting the coil.

A shortened antenna is never going to be as good as a full size one - but unless I get into spark transmission, I cerainly could not use anything else for 80m.

Mike

Hello Everyone,

I have the following for sale. I have revised and updated this list which was posted previously. All items are in very good condition or better. The HF package is split up and many prices are REDUCED. Serious offers are considered. Payment by US Postal Money Order, prepaid only. Prices include ground shipping by UPS, CONUS. If interested, please e-mail n3fvg@worldlynx.net

ICOM IC-706 HF/6M/2M mobile with all standard accessories, manual, boxes, etc. .... $ 650.00

ICOM OPC-599 adapter cable to use IC-706 with other Icom automatic antenna tuners like the AT-160, like new. .... $ 45.00

ICOM IC-03AT 220 Mhz. HT package. IC-03AT with BC-35 Desktop Charger, brand new BP-7S battery, BP-8S battery, IC-DC1 mobile adapter, Icom Speaker Mic, manuals, standard accessories and boxes. .... $ 275.00

BEARCAT BC-3000XLT handheld scanner, 25mhz. - 1.3ghz. (less cellular but receives "cell images"), rubber ducky, ac adapter/charger, battery pack just rebuilt, instruction manual. .... $ 200.00

RADIO SHACK PRO-62 handheld scanner, 30mhz. - 960mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used. .... $ 125.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition. .... $ 200.00

KENWOOD MC-60A amplified desk microphone. In box, no manual, in excellent condition, used very little. .... $ 90.00

KENWOOD UT-28S 10M FM unit for TM-641/741/642/742 mobiles. Brand new in box, never installed or used. .... $ 250.00

DIAMOND MX-214 duplexer, (2M/220Mhz.) with 12" leads. .... $ 40.00

COMET CF-530 HF/VHF duplexer, with 12" leads. .... $ 45.00

Unknown brand HF SWR/wattmeter, German mfg.?, says handles 1KW but looks more like 300 W. In Box, like new. $25.00

(4) JOBCOM UHF Handheld portables, 2ch., 2W, 1 channel installed in each, 3 on same frequency, 1 different. Very easily recrystalled with rubber ducks and plug in battery chargers. ....$ 150.00 for set

If them aliens ain't using their flippers or claws to pound out good
ol' STRAIGHT KEY CW Morse Code, Real Hams got no business encouraging
this sort of thing.

You are absolutely correct. Did anyone say anything different?

Cheers... Hap

Hi there... I'm an electronic musician seriously searching for electronic
musical equipment from the 1960's-80's, in any condition, BROKEN OK:

- SYNTHESIZERS
- KEYBOARDS
- DRUM MACHINES
- VOCODERS
- EFFECTS PROCESSORS
- ANALOG SEQUENCERS

- ANALOG MODULAR SYNTHS (full systems or component modules)
- MIDI GEAR

Dials or slider controls preferred but not required. The older and more unusual, the better.

Moog, ARP, Roland, Sequential Circuits, Oberheim, Korg, Roland, EML, EMS, Buchla, PPG, Aries, Steiner-Parker, Tonus, Ionic, SMS, Maplin, Yamaha, Simmons, Voyetra, Octave-Plateau, Bode, Polyfusion, Serge, Delta, Emu, Sennheiser, Mutron, Maestro, ElectroHarmonix, Electronic Music Laboratories, Electronic Music Studios, ANYTHING SIMILAR.

I'm also looking for older literature on old synthesizers and electronic music: periodicals, books, product brochures, etc.

Please email me at rolandman1@aol.com if you've got anything you'd consider selling or know someone who could. Please be sure to include price and condition. Thank you in advance and sorry if this message annoys anyone.

Steiner Synthacon
ARP Sequencer
Tonus ARP model 2600 Synthesizer
Mutron Biphase dual phaser

Anyone have a Ford Expedition with radio gear installed ? Where do you
run power through the firewall to get to the battery ? I find no
grommet of any kind. All wiring harnesses go through a connector on the
firewall.

Any help would be appreciated

N5ISV
Randy

Hi Randy,

Follow the hood release cable and you should be able to pass a
stiff rod past the grommet at that point to route your power cables.

If the expedition is like my F-150, and I think it is- you will find a round
rubber plug, about 1 1/2 inches round....on the firewall....if you pull the
carpet down a bit, there is a black material that is the outer coating for
the floor insulation. There was a round cutout there, that you can lift up

carefully a circle of that insulation, and that exposes the back side of this rubber plug. You then cut an X in this plug, pass your wires thru and then push the insulation back in place... Best thing of this type I ever saw....

If you look right next to the steering column, (98 model), there's a

rubber boot that covers a hole in the firewall that comes out above
the break pedal. I have a pair of 4/0 and RG-58 coming through there
that runs all the way to the back.

I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only. If you need a commercial site, or need custom solutions, let me know with the online form.

And, of course, as always you can create azimuth maps centered on your QTH (or any QTH, for that matter), check dx, propagation, or swap and shop. And more. At the http://hfradio.org site.

Hope I meet you on the air. I hang out on 20, 15, and 10.

I am getting out of the hobby, so no trade offers please.
I live in Dayton, OH for those close by.

For info from Kenwood's web site go to......
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-742AD&selection=Amateur

My unit is the 742A model (not the 742AD). From what I've been told, the only difference
is the AD comes with a back lit mic.

The price is firm. It is priced at less than 50% of what I paid.
I will pay the UPS shipping to you (US only).

Contact..... greggw@erinet.com

Hi there. I'm an electronic musician seriously searching for the following old electronic musical instruments from 1960-1990, any condition, broken OK:

Synthesizers
Keyboards
Drum Machines
Sound Modules
Effects Processors (tape echos, filters, flangers, phasers, etc)
Analog Sequencers
Analog Modular or Patchable Synths

Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer
Roland TR-909 Rhythm Composer
Roland TR-808 Rhythm Composer

Moog, ARP, Korg, Roland, EML, EMS, Buchla, Serge, Yamaha, Aries, SMS, PPG, Electrocomp, ATA, Casio CZ/VZ, Simmons, Electroharmonix, Steiner-Parker, Polyfusion, Emu, Wavemakers, Synton, anything similar!

In general, I'm looking for old stuff with knobs, sliders or especially built in patchbays. The older or more unsual, the better!

For a better idea of what I'm into, please see:
http://members.aol.com/rolandman1/index2.html

If youve got anything or know someone who might, please email me privately at rolandman1@aol.com and be sure to include price and condition.   Thanks in advance and apologies if this message bothers anyone.

amaha TG77 Tone Generator
Casio VZ-10m Professional Digital Synthesizer
Roland System-700
Roland System-100m

Hi all, and thanks for reading,

I am considering the purchase of a 3 band HT, to cover 2 meter and 70 cm
, thoses i am already familiar with and also 6 meter, but i dont know
anything about 6 meter, so any info would be appreciated,
basically i am looking for physical specs as well as usage, Ie, does it
propagate well, what are the limitations, what are the optimal earth
conditions, things like that...

Thank you, reply via e-mail please...

It seems to be an interesting band so I got a repairable 6M rig for
$5. The receiver appears to be working but I have not heard a single
transmission. I am using an indoor 40M dipole but I was expecting
to hear something here in the center of PA.
Does this sound normal or is my $5 rig worth what I paid?
Do many people do CW on 6?

I am able to receive the neighbor's baby monitor on 49 but the baby
doesn't QSL.

Do you wish to be alerted when Solar Flux, A index, or the K index figures
change? Don't want to carry around a radio tuned to WWV, etc.?

I have a alpha-numeric pager that I can email. I know others have cell phones
with the same feature. And yet others read email all day long.

So, I created an automated e-report with the WWV report. This email is only
sent when one of the three figures change.

If you wish to subscribe to this e-report, visit http://hfradio.org, and go to the propagation center. There you will find a form that allows you to submit your email address to the list.

Also, I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only. If you need a commercial site, or need custom solutions, let me know with the online form.

And, of course, as always you can create azimuth maps centered on your QTH (or any QTH, for that matter), check dx, propagation, or swap and shop. And more. At the http://hfradio.org site.

Hope I meet you on the air. I hang out on 20, 15, and 10.

73 from NW7US

You might also want to look at the Icom T81, which has 6m/2m/70cm and
23cms.

>anything about 6 meter, so any info would be appreciated,
>basically i am looking for physical specs as well as usage, Ie, does it

When its flat, its very flat, but when it opens, its a very nice band.
I have worked a large portion of Europe from the SW UK, using a
homemade beam and 5watts.

arrl.org   index of old articles.

Dig enough in these and you'll find mods, I did, but haven't done any.
The one for LF coverage was tempting, but too much noise here.

>
> -troubleshooting or problems you managed to solve on your own.

I blew the ts430s driver transistors, and replaced them.
I'd overdriven them while tuning.

Hi All,
thank you for reading this NON COMMERCIAL message.

I'm looking for info about TS 440 S like follows:

-mods and improvements you have personally experienced or heard about;

-troubleshooting or problems you managed to solve on your own.

All this info will help me to create a web page about ts-440s .
Please help me to make this site as complete as possible.

The site will be free access and the information will NOT be used for
commercial porpouses but only for electronic experimentation.

Please, if you have some info, just send me an e-mail to :
dcl@ascu.unian.it.
Just send me a short summary of what you experinced. I'll chech this info

and, if what you sent is something new, I'll beg you to send me the
complete description of your experince. This procedure avoids to have a
lot of articles dealing with the same matter.

Thank you and 73.

I just replaced the lithium battery in my TS-440. This is a CR-2032 3 Volt coin cell and is available in horizontal PC mount configuration from Mouser electronics for $1.43. Actually what I did was to use the slightly larger CR-2450 (available from Wal Mart) and soldered in the matching button cell battery holder. This was a good match to the battery leads extending up out of the CONTROL ckt board. There is a metal shield covering the CONTROL board which allowed sufficient clearance for the CR-2450 and socket. But to be safe, I applied a couple strips of black tape to the shield to guard against accidental shorts to the battery.

The most time consuming portion of the project was simply to find the location of the battery. The service manual didn't address battery replacement. The instruction manual suggests having the battery replaced at a service center. However it did have an unidentified sketch of the battery on page 29 where it discusses installation of the IC-10 interface kit. The procedure to access the battery is given on the same page under 6-3-1. Installation, which explains how to open up the front panel. Replacement is fairly straight forward and afterwards, reset the CPU by pressing A=B along with the POWER ON switch. The rig should then power up on 14.000 MHz.

As a TS-440 owner, I'd be supportive of a site that documents problems and solutions. I do have the service manual but it's written on the assumption one has already attended a course in theory and repair :-(

Hi,

I've recently starting shortwave listening again and I'm confused by some a signal I'm getting. The signal starts at the around the top of the MW or about 1.6MHz and can be heard all the way up to about 3.0MHz. It's like a superwide occillator and it beats at around about 2Hz.

If I disconnect the aerial it disappears with everything else. It's quite stromg and very annoying !!!

For what it may be worth I live in North Manchester UK. I've heard about atmospheric effects causing problems, could this be such a case ?

Thanks
Mike Holme

Try taking your RX into work and see if the signal is still there. I guess it won't be. More likely to be something either in your house or in your street rather than atmospheric effects. Something electrical like a thermostat etc, I get similar problems when the central heating boiler comes on, you could try and observe the times it occurs and disapears and see if you can relate that to anything switching on or off, may be it's your CD player? I Also get a woosh of noise ever 15Khz all the way through HF but I just haven't the heart to go next door and ask them to switch off their telly (it is caused by the timebase signal), some things you just have to put up with, pity it doesn't work the otherway round - try telling someone that the expensive HIFI/TELLY they just bought hasn't got any immunity to out of band signals i.e. legitimate transmissions in the amateur bands.

You can get more info about EMC - electromagnetic compatability from www.rsgb.org.uk amoungst others, it really is a big field so you'll be in for a long battle I'm afraid.

Hello

This time only to inform that a new callsign database is available for download. Now with more than 13300 callsigns.
Get it at:

http://www.airnavsystems.com

followed by data files link.
This update were only possible with the important help of many AirNav users.
Really hope this is of your interest.

Best regards, Andre Brandao

Solar flux of 248 today, is record for this Cycle. K index at the moment of 1, A of 14 -- heck, the bands should be hopping today and tonight. Heard long paths fairly loud today. But, Aurora activity (level 4 and 5 today) is indicating some polar absorbtion.

I've added the aurora level report to the eAlert that I offer. The eAlert seems to be a popular service -- I have had a large number of new subscribers.

Do you wish to be alerted when Solar Flux, A index, or the K index figures change? Don't want to carry around a radio tuned to WWV, etc.?

I have a alpha-numeric pager that I can email. I know others have cell phones with the same feature. And yet others read email all day long.

So, I created an automated e-report with the WWV report. This email is only sent when one of the three figures change.

If you wish to subscribe to this e-report, visit http://hfradio.org, and go to the propagation center. There you will find a form that allows you to submit your email address to the list.

Also, I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only. If you need a commercial site, or need custom solutions, let me know with the online form.

And, of course, as always you can create azimuth maps centered on your QTH (or any QTH, for that matter), check dx, propagation, or swap and shop. And more. At the http://hfradio.org site.

Hope I meet you on the air. I hang out on 20, 15, and 10.

Hi,

A second hand Racal 1792 costs about 750UKP, whilst a Lowe 225 a third of the price. My question is this. In what way is a Racal 1792 three times as good as a Lowe 225. Similarly Racal 1784 and 1772 models are about trice the second hand value as this popular Lowe receiver. Are

they that much better and if so in what way. I'm considering buying one
of these Racal sets as the ex GCHQ, ex enormously expensive and general
reputation of these radios attracts me to them. However I'm by no means
loaded, I can afford the Lowe just about, the Racal sets are bordering
on madness. Anybody compared them ?

I currently have a Racal RA17L which is very good, and this adds abit to
the leaning towards Racal.

Any unbiased opinions out there ?

Thanks,
Mike

For the past 40 years, receiver performance has been limited by atmospheric noise, not the electronics. What you get in the Racal product is a product that is designed to last longer than you will, and be able to tolerate all manner of abuse from users who may range from merely inept to downright destructive. You are paying mostly for mil-spec ruggedized equipment, not for improved performance.

There is a law of diminishing returns. There is a large difference between a $100 SW receiver and a $250 receiver. $250 buys you an RF amp, Dual conversion, digital tuning and synch detection. Once you have done those things,you can improve the margins a little, but all the basics are there.

The difference between the $250 and $625 receiver is often a lot less, and in terms of raw performance, there is likely to very little difference between the $625 receiver and a $1500 receiver.

It is likely that the Racal has a little better stability, and some more features, however the differences are likely to be very small, and frankly, not worth anything like the price difference.

Let me give you another analogy. Can you tell by looking at the picture if it was taken with a $300 or a $3000 camera?

My keypad is intermitant on my TenTec Paragon. TenTec and their famous support no longer stocks them and the current model is incompatable. It seems work better after I have used it a while. Does any one know of how to fix this or knows of a place that can fix this.

Many thanks in advanced

Not a chance :)

However I'll throw in my two penn'th...

I regard Racals of every stripe as the kit of the fanatic and, in the case of the later models, the fanatic with deep pockets.

However, the '225 is my sort of thing, but then I want to listen and not have to muck about. If you're a driver, as opposed to a listener, you'll hate the '225 - there's nothing much to play with. It's also designed for voice reproduction so if you're into utes it's probably not the best choice.

Shop around and basic '225s are going for around 200 - 225 these days, but for that you won't get a keypad or FM/sync board. The keypads are probably still sold because they also work with the HF150, but not, I think, the sync board. I regard a '225 without either as a bit lacking, but that may be a minority position.

If you're prepared to wait, Europa versions come onto the market from time to time and they are worth the wait. Surprisingly, the markup over the stock '225 isn't all that much.

Fran.

Hello

Ive created a new live aviation site in AirNav Systems Homepage.
There you may find links to Real Audio airband communications, realtime
airport information and airport Webcams.
Ir is available at:

http://www.airnavsystems.com/live

This new page will be frenquently updated.

Best regards, Andre Brandao

Hello Everyone,

I have the following for sale. All items are in very good condition or better unless otherwise indicated. I would like to sell the indicated packages as packages unless I get a great offer otherwise. Below prices include CONUS UPS shipping. Payment by US Postal Money Order ONLY, and prepaid. NO C.O.D.'s, etc.

ICOM HF Mobile Package - IC-706 HF/6M/2M mobile with Icom AT-160 automatic antenna tuner, OPC-599 acc cable, Comet CF-530 HF/VHF duplexer and all related standard accessories, manuals and boxes.........$ 950.00

ICOM IC-03AT 220 Mhz. HT package - IC-03AT with BC-35 desktop charger, brand new BP-7S battery, BP-8S battery, IC-DC1 Mobile Adapter, Icom speaker mic, manuals, standard accessories and boxes............$ 325.00

STANDARD C228A 2M/220 HT with CNB-153 battery pack, rubber ducky antenna and plug in charger ONLY..$ 300.00

BEARCAT BC-3000XLT handheld scanner, 25mhz.- 1.3 ghz. (less cellular but will receive "images), rubber ducky, ac adapter and charger, battery pack just rebuilt. Includes copy of instruction manual..........$ 225.00

RADIO SHACK PRO-62 handheld scanner, 30mhz.- 960 mhz. (less cellular and 220 Mhz. band), with optional leather carry case, rubber ducky, alkaline batteries, and standard accessories in box. Only programmed, then put back in box, never used...$ 150.00

MFJ-989C Versa Tuner V HF antenna tuner. No original box or manual but used very little. In excellent condition........................$ 250.00

KENWOOD MC-60A amplified microphone. In box, excellent condition, no manual..$ 100.00

The Kenwood TSU-7's have been sold.

KENWOOD UT-28S 10M unit for TM-641/741/642/742 mobiles. Brand new in box, never used...$ 260.00

(2) KENWOOD MC-44 microphones, 8 pin din plug, brand new in boxes, never used...$ 25.00 each

KENWOOD MC-52DM microphone, 8 pin din, back-lit ttp, brand new in original wrapper, never used....................................$ 30.00

DIAMOND MX-214 Duplexer (2M/220).................................$ 45.00

MOTOROLA Montana 33.6 PCMCIA Cellular 33.6 Modem/Fax with cable for connection to Motorola Cellular Phone............................$ 25.00

Unknown brand HF SWR/Wattmeter, German mfg.?, says it handles 1KW but I wouldn't try it. Probably handles 300 watts, in box..............$ 25.00

(4) JOBCOM UHF handheld portables, 2 channel, 2W, 1 channel installed, 3 on same frequency, 1 on different frequency. Easily re-crystalled. With rubber duckies and plug in chargers................$ 200.00 for set

MAXON VHF-hi , model CP-0510 handheld portable, 4 channel - 1 installed, with drop in charger...$ 50.00

TERMS: PREPAID only by US Postal Money Order. Prices include CONUS UPS ground shipping.

I am clearing out the ham shack of all my QST magazines once again. If
anyone is interested, I am selling
1992-1998 at $1.00 ea. (you pay shipping costs however you want them
shipped) for 1 to 10 issues. If you
are interested in over 10 issues or the entire collection, make me an
offer. I am willing to ship anywhere on
this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Feb & April - Dec $1.00 ea.
1994 Jan - Oct & Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers.
Sorry I don't have anymore, but the last
time I did this in 1993, I sold all my 1989 through my 1992 issues less
a few months still available.
If you would like to check my references, please feel free to do so. I
am on Ebay and my user ID is: Andrew45
http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=andrew45

Does anyone know a way to clone the Kenwood TM261A?

And remove the NOSPAM for the reply.
    Thanks, Erik

Cees biedt aan gratis een PC Moederboard type 286 compleet met geheugen =
(30 Mb), een keyboard voor inbouw (nieuw) voor PC. Een en ander is =
gratis af te halen na telefonische afspraak.

Tel: 013-4672838=20

PD1AGO (1)

Biedt aan een Pentium 200 PC, met 36 speed CD-ROM, 2,5 GB harddisk, 32 =
MB EDO RAM geheugen. Miditower uitvoering,compleet met muis en =
toetsenbord, echter zonder monitor.

Tel: 013-5711967

PE1ITY (1)

Zoekt een schema voor een Minerva kleuren TV, type MT5515. Het =
binnenwerk van de KTV is van makelij Philips, dus het vervangend schema =
voor het chasis is ook prima. Verder zoekt hij het nieuwe adres en =
telefoonnummer van het bedrijf Binell in Nijverdal, gespecialiseerd in =
schema's en documentaties van allerlei TV's en videos.

Tel: 013-4557150

PA3CLG (0)

Is op zoek naar een adres waar men nog de powermodule kan krijgen van de =
Standard C156E 2 meter portofoon, Mitsibusti M67798 LAM. Toon heeft =
reeds verschillende adressen geprobeerd, echter niemand kan hem aan deze =
module helpen.

Tel: 013-5181978

PE1NLZ (0)

De vader van Andre heeft vanwege verbouwing een hele hoop Radio en TV =
onderdelen uit de jaren 40, 50 en 60 overcompleet. Verzamelaars kunnen =

contact opnemen met Andre, en bij de opruiming zal Andre bekijken of er = iets interessants voor deze persoon tussen zit.

Tel: 013-5702697 of email: pe1nlz@hetnet.nl=20

Korte Berichten

Zonne-energie wordt veel goedkoper

Aan de universiteit van Florida is men druk bezig met het ontwikkelen = van dunne-film zonnecellen. Ze zijn 100 maal dunner dan de huidige = zonnecellen die uit silicium vervaardigd zijn. Silicium dat uit proper = zand gewonen wordt. De nieuwe zonnecellen zijn tussen de 2 en de 3 = micron dik. Ter vergelijking: een mensenhaar is 70 micron dik. De = dunne-film zonnecellen kan worden op glas aangebracht. Het rendement is = 15 %, dus 100 watt zonne-energie wordt omgezet in 15 watt elektrische = energie. Het zal wel nog meerdere jaren duren eer die cellen commercieel = uitgebracht worden. Maar de vraag naar zonnecellen neemt alvast niet af, = maar groeit jaarlijks met 20%.=20

M5-prefixen weldra in de lucht

Zoals ik vorige weekr reeds meldde, zijn er grote veranderingen op komst = in Engeland: over enkele weken zullen de nieuwe A/B licenties van kracht = zijn. De bedoeling is de interesse voor het radio-amateurisme aan te = vijzelen. De A/B licentie call is M5xxx en die horen we dus binnenkort. = Deze A/B licentie geeft toegang tot ALLE amateur banden en krijgt men na = een theoretisch examen en een 5 wpm morse test. Het vermogen dat de = M5-licentie houders mogen gebruiken is 100 watt op de HF banden en 400 = watt daarboven. De nieuwe regeling in Engeland moet het radioamateurisme = aantrekkelijker maken.

Lokaal Nieuws

Cursus nieuws

De regio Tilburg kent 2 kwalitatief zeer goede cursusen die opleiden = voor de N/C licentie.=20

De VRZA afdeling Hart van Brabant start na de vakanties met een nieuwe = N/C curus, deze cursus vindt op een door de weekse dag plaats in het = scoutinggebouw van de Rey de Carle scoutinggroep gelegen aan de = sportvelden aan de Heerenveldeweg in de wijk Reeshof. Voor meer = informatie kunt u contact opnemen met Michel Elissen, PA3DGW, tel: = 013-4673734 of per E-mail: pa3dgw@vrza.org.

Joop, PA3HIM, start medio november namens de VERON afdeling Tilburg met = een N/C cursus die een jaar zal gaan duren. De cursus vindt elke dinsdag = plaats van 19.30-21.30 uur in wijkcentrum =91t Zand, Beneluxlaan 74 te = Tilburg. Joop gelooft in een zeer persoonlijke aanpak, en zal daarom = niet meer dan 8 cursisten per keer aannemen. Op dit moment zijn er al 6 = kandidaten, dus er zijn nog 2 beschikbaar. Geintereseerden kunnen Joop = bellen op tel: 0416-337261.

Morsecursus, indien er genoeg belangstelling is zal Michel, PA3DGW ook =
dit najaar een cursus opstarten. Echter op dit moment zijn er 3 =
aanmeldingen en is het opstarten niet interesant. Mocht u ook =
belangstelling hebben voor de morsecursus, aarzel u dan niet om op te =
geven, Michel Elissen, PA3DGW tel: 013-4673734 of E-mail: =
pa3dgw@vrza.org.

Afdelingsbijeenkomsten in de regio

Kempische Amateur Radio Club

Vanmiddag de heropening van cultureel centrum " den herd " in Bladel, de =
KAR is aanwezig op de open dag van 13 tot 17 uur met een infostand om de =
Bladelse bevolking te informeren over onze hobby. De bijeenkomsten van =
de KAR vinden elke tweede donderdag van de maand plaats in Cultureel =
Centrum d=92n Herd, aanvang 20.15 uur. De volgende bijeenkomst is op =
donderdag 9 september. Elke zondagavond om 19.30 uur is de Kempische =
ronde met de call PI4KAR op 145,575 MHz. Verder informatie over de KAR =
kunt u vinden op internet, het adres van de homepage is: =
http://www.qsl.net/pi4kar/. Voor verdere informatie kunt u terecht bij =
de secretaris, Bert Plaum, PA3ENH, Stijn Streuvelslaan 6, 5531VB Bladel, =
tel: 0497-387083. Via packet: PI4KAR@PI8ZAA of via E-mail: =
bplaum@iaehv.nl.

VRZA afdeling Hart van Brabant

De bijeenkomsten van de VRZA afdeling Hart van Brabant vinden elke =
eerste donderdag van de maand plaats in het scoutinggebouw van de Rey de =
Carle scoutinggroep gelegen aan de sportvelden aan de Heerenveldeweg in =
de wijk Reeshof, aanvang 20.00 uur. De eerst komende verenigingsavond is =
op donderdag 7 oktober. Elke tweede en vierde woensdag van de maand is =
er een ronde om 20.30 uur =91s avonds op 145,400 MHz onder de call =
PI4HBV. Meer informatie over de VRZA afdeling Hart van Brabant kunt u =
terugvinden op internet, de homepage is: =
http://home.worldonline.nl/~pe1orz/pi4hvb.html. Informatie of vragen =
kunt opvragen of stellen aan Michel Elissen, PA3DGW tel: 013-4673734. U =
kunt ook contact opnemen via packet: PI4HVB@PI8HWB of via E-mail: =
pa3dgw@vrza.org.

VERON afdeling Tilburg

De VERON afdeling Tilburg houdt elke tweede dinsdag van de maand zijn =
afdelingsbijeenkomsten in wijkcentrum =91t Zand, Beneluxlaan 74 te =
Tilburg (in het zelfde gebouw als de openbare bibliotheek). De =
bijeenkomsten beginnen op 20.00 uur en zijn voor iedereen vrij =
toegankelijk, lid of geen lid van de VERON. De volgende verenigingsavond =
is gepland voor dinsdag 14 september, op deze avond is niet bijzonders =
gepland, en deze avond staat dan ook in het teken van bijpraten na de =
vakantie. Voor verdere informatie over de VERON afdeling Tilburg, kunt u =
onze internet pagina raadplegen, u kunt daar komen door op internet de =
VERON homepage te raadplegen, http://www.veron.nl/amrad, als u afdeling =
aanklikt en uw klikt daarna afdeling Tilburg aan komt u vanzelf op de =

homepage terecht. U kunt ook rechtstreeks het volgende adres intikken: =
http://home.worldonline.nl/~pe1orz/pi4til.html. Vragen over de VERON =
afdeling Tilburg of informatie opvragen kunt u stellen via packet =
PI4TIL@PI8SHB of via E-mail pa3dzm@amsat.org. Uiteraard kunt u ook =
telefonisch contact zoeken, tel: 06-53616482 . Wilt u per post =
informatie aanvragen dan moet u dat sturen ter attentie van: PA3DZM, =
Eric van den Bergh, Europalaan 50, 5042 ZT Tilburg.

Contest nieuws

VHF en hoger contestnieuws

Scandinavian activity 144 MHz

Dinsdag 7 september van 18.00-22.00 UTC.=20

IARU ATV contest 432 en hoger=20

Donderdag 9 september 18.00-22.00 UTC.=20

HF contesten

European DX-Contest SSB

De contest begint op zaterdag 11 september om 00.00 UTC en duurt 48 uur =
tot en met zondag 12 september 24.00 UTC. Het doel van de contest is het =
werken met stations buiten Europa op 80, 40, 20, 15 en 10 meter in de =
mode SSB. Klasse van deelname: Single Operator, Multi Operator Single =
Transmitter en SWL klasse. Het gebruik van DX spotting netten is =
toegestaan. De 10 minuten regeling is van toepassing. Voor Single =
Operators mogen maar 36 uur van de 48 uur actief zijn. De rustpauze mag =
in een periode of maximaal 3 perioden van 4 uur genomen worden. De =
rustperiodes moeten op het summary sheet vermeld worden. Uitwisselen een =
RS rapport. een volgnummer. Een station mag maar eenmaal per bande =
gewerkt worden. Multipliers de landen van de DXCC en WAE lijst, buiten =
Europa. De multipliers op 80 meter mogen met factor 4 vermenigvuldigd =
worden, op 40 meter met factor 3, en op 20, 15 en 10 meter met de factor =
2. Men kan aanvullende punten scoren met QTC verkeer. Een QTC kan door =
een station buiten Europa verzonden worden, waarin de tijd, call en =
volgnummer vermeldt wordt b.v. 1307/DA1AA/431. Een maximum van 10 =
QTC=92s mogen naar hetzelfde station verzonden worden. De QTC=92s moeten =
op een apart blad vermeld worden, met een vermelding van het station die =
de QTC verzond en op welke band. Score: totaal aantal QSO=92s + QTC=92s =
maal het aantal multipliers van alle banden. Logs insturen via E-mail =
naar waedc@darc.de. Op de DARC homepage http://www.darc.de/referate/dx/ =
kan men meer contest logging details terugvinden. Logs insturen voor 15 =
oktober naar: WAEDC Contest Committee, Duererring 7, P O Box 1126, =
D-74370 SERSHEIM, GERMANY

North American Sprint Contest SSB=20

Zondag 12 september van 00.00 tot en met 04.00 UTC. Het is de bedoeling =

om zo veel mogelijk stations in Noord-Amerika te werken. Banden 80 en 20 =
meter. De gesuggereerde frequentie is CW zijn 3580, en 14275 kHz. Men =
mag een station een keer per band werken. Uitwisselen: De call van het =
tegenstation, je eigen call, volgnummer, je naam en je DXCC land. Score: =
per QSO 1 punt. De multipliers zijn de staten van de USA en de Canadese =
provincies. Na het QSO, behoudt het aanroepend station de frequentie en =
gaat het CQ roepend station minimaal 5 kHz QSY. Logs insturen naar Rick =
Niswander, P.O. Box 2701, Greenville, NC 27836, USA. Of via E-mail =
niswanderf@mail.ecu.edu.

DX nieuws=20

Europa=20

eigen calls.

F-Frankrijk

Paul, F6CXV is vanaf vandaag tot en met 24 september op vakantie op het =
eiland Croix, EU-048. Tussen 10 en 23 september zal hij waarschijnlijk =
actief zijn met de call TM0G. QSL via zijn eigen call.

SV5-Dodecanese eilanden

Vanaf komende dinsdag 7 september tot en met 15 september zullen 6 =
Griekse amateurs actief zijn met de call SW5AI vanaf het eiland =
Agathonisi, EU-001. De activiteiten vinden plaats op 160-6 meter in CW, =
SSB en RTTY. Men zal rondom de klok 24 uur per etmaal actief zijn. QSL =
via SV8DTL.

Afrika

3X-Guinea

Karel, ON4QY zal de komende paar jaren actief zijn als 3XY2A vanuit =
Conakry. Hij is regelmatig gesignaleerd op 21275 kHz tussen 16.30 en =
19.30 uur UTC. QSL via zijn eigen call.=20

EA8-De Canarische eilanden

Jeff, G4ELZ, is tot en met 18 september actief als EA8/G4ELZ/p vanuit =
Puerto de la Cruz. Hij zal voornamelijk op 20 meter in CW actief zijn. =
QSL via zijn eigen call.

TU-Ivoorkust

Laurent, F4ATM zal vanaf komende dinsdag 7 september tot en met 17 =
september actief zijn als TU2/F4ATM. Hij zal gebruik maken van een =
Kenwood TS-850 en een 14AVQ verticale antenne. QSL via zijn eigen call.=20

V5-Namibie

Zoals ik vorig week al vermeld heb in dit bulletin, is Charlie W0YG met =

een reis door Afrika bezig. Vanaf morgen is hij actief als V5/ZS6YG. Hij = zal tot 20 september in Namibie blijven. De activiteiten zullen in het = onderste deel van het CW gedeelte van 30 tot en met 10 meter plaats = vinden. QSL via zijn eigen call.

Azie

5B-Cyprus

Steve, G3VMW and Bob, G3ZEM zijn tot en met 9 september actief als = 5B4/G3VMW en 5B4/G3ZEM vanaf Cyprus, AS-004. De plannen zijn om de = nadruk te leggen op 12, 17 en 30 meter. QSL via de eigen calls.

9M2-West Maleisie

Mirek, 9V1XE zal vanaf morgen tot en met 9 september actief zijn als = 9M8DX/2. Hij is actief vanaf het eiland Tioman, AS-046. QSL via de eigen = call.

BY-China

Ed, BD4ED/4 die op dit moment op een eiland verblijft in die als IOTA = referentie AS-136 heeft is dagelijks actief op 30 meter tussen 20.00 en = 22.00 UTC. 9 Chinese zendamateurs zijn vanaf 8 september 5 dagen actief = als BI7Y vanaf het eiland Yangxing en de archipel Xisha onderdeel van de = Paracel eilanden (Nog geen IOTA referentie). Men zal met 2 stations, een = beam en een amplifier actief zijn op 40-10 meter. Het heeft de leider = van de DX-peditie een jaar gekost om het nodige papierwerk rond te = krijgen. QSL via BA7JA.

HS-Thailand

Don, G3VFU is op dit moment in Thailand en actief op alle HF banden als = HS0/G3VFU. Don is alleen actief in SSB. QSL via W3HNK.

YI-Irak

YI1EE, YI1SEA of YI1DX zijn vaak actief op 21234 kHz tussen 09.30-12.00 = UTC.=20

Oceanie

FO-Frans Polynesi=EB=20

Patrick, FO5QS, leeft op dit moment op het eiland Huahine (OC-067). De = komende paar maanden is hij bijna dagelijks in de lucht tussen 14120 en = 14150 kHz tussen 05.00-08.00 UTC. Zijn nieuwe QSL adres is: Patrick = Freys, Box 643, F-98731 Fare, Huahine, French Polynesia. Jose, FO5QG is = dagelijks actief op 20 meter voor 06.00 UTC. QSL via XE1L. Marcel, ON4QM = is tot en met eind november als FO0DEH actief . Hij is actief met 100 = Watt en een vertical. Hij zal onder andere actief zijn vanaf Raivavae = (OC-114), de Austral eilandengroep, en andere IOTA eilandengroepen in = deze omgeving. QSL via de eigen call.

KH8-Amerikaans Samoa

Vanaf komende dinsdag 7 september tot en met 17 september zijn SM6CAS en =
G4EDG actief als KH8/SM6CAS in SSB, en KH8/G4EDG in CW vanaf Pago Pago, =
OC-045. Op 17 september vertrekken ze naar het eiland Kanton in Centraal =
Kiribati. Meer informatie over deze DX-peditie is terug te vinden op de =
Double Trouble DX-peditie website: http://www.qsl.net/t31t/. QSL via =
LA7MFA.=20

Pacific reis

Ron, ZL1AMO zal op 8 september Nieuw Zeeland verlaten en vervolgens =
verschillende eilanden in de Pacific aandoen. De plannen zijn om 1 week =
actief te zijn als 3D2RW vanaf Fiji, 1 week actief te zijn als 5W1CW =
vanaf West Samoa, en 4 weken vanaf ZK3, Tokelau (rond 24, 25 september).

Antarctica

Oleg is R1ANF tot en met 8 september actief als /A vanaf de Chinese =
basis "Great Wall" op het eiland King George, AN-010 . QSL via RK1PWA.

Speciale calls

4X2J

Dit speciale station is tot en met 3 oktober elke dinsdag en zaterdag =
actief vanuit het Bloomfield Science Mueseum in Jeruzalem. QSL via het =
bureau.

5A30

Dit speciale station is tot en met 7 september actief vanwege het 30 =
jarig jubileum van de Libische revolutie. QSL via K1WY.

9A2000B

6 Kroatische amateurs zullen tot en met 8 september actief zijn met deze =
call vanaf de Brijuni/Brioni eilanden (EU-110). Oorspronkelijk zou men =
uitkomen met de call 9A2000FT zoals vorige week in dit bulletin bericht, =
maar de authoriteiten hebben de call gewijzigd. QSL via 9A7K.

UE0JX

Deze speciale call is tot en met 30 november actief in het kader van het =
120 jarig bestaan van Zeya City. QSL alleen DIRECT via RA0JX: Vladimir =
I. Babynin, P.O.Box 1, Zeya-3, Amurskaya Obl.676200, Russia.=20

Speciale Poolse Calls

De Poolse kortgolf operators vereniging in Gdansk kondigt aan dat in het =
teken van het 60 jarig jubileum van de verdediging van de Poolse kust, =
er een aantal speciale stations actief zullen zijn. Deze stations zijn =

actief tot en met 2 oktober. De volgende stations zijn actief 3Z60H = vanaf het Hel schiereiland, QSL via SP2FJN. 3Z60O vanuit Oksywie, QSL = via SP2HJN. 3Z60P vanuit het Museum van de Poolse Post in Gdansk. QSL = Manager SP2AYC. 3Z60W vanuit Westerplatte QSL Manager SP2BNJ. 3Z0BLY = vanuit het Destroyer Museum "ORP Blyskawica" QSL Manager SP2PMW. 3Z0MDL = vanuit het het Naval Aquadron in Puck, QSL Manager SP2UUU.=20

6 meter nieuws

Albanie: Dave, ZA/N7BHC heeft zijn eerste QSO op 6 meter gemaakt. Het = QSO was met ZS6PJS. Dave maakte gebruik van 100 Watt uitgangsvermogen en = een verticale whip antenne gemonteerd op het balkon van zijn hotelkamer = op de 5de verdieping. Dave zal in de loop van deze week verhuizen naar = een huis, en hoopt dan een 5 elements yagi te kunnen plaatsen. De = locator van Dave is JN91.

Argentinie: Jorge, LU7XP is actief vanaf het eiland Tierra del Fuego, = SA-008. Het westelijk deel van dit eiland behoort toe aan Chili, en het = oostelijk deel aan Argentinie. Jorge is actief vanuit het locatorvak = FD55UE en is zeer actief op 6 meter. QSL via P.O.Box 110, Ushuaia, 9410, = Tierra del Fuego island, Argentina.

Armenie: Eugeni, EK6AD is actief vanuit het locatorvak LN21JR. Hij is = vrij veel te vinden op 6 meter wanneer er grote openingen zijn. QSL via = Eugeni I. Kurgin - Tamantsineri Street 18, Apt. 56 - Yerevan 375106 - = Armenia.

Japan: Japan kent reeds enkele jaren machtigingen voor 6 meter. Echter = de vermogenbeperking was 50 Watt. Sinds de laatste cyclus is dit = vermogen opgeschroefd naar 100 Watt en 500 Watt. Sinds kort zijn er ook = vergunningen te verkrijgen voor een vermogen van 1 kilowatt op 6 meter. = Op dit moment zijn er al 20 tot 30 stations actief met zo een 1 kW = vergunning.=20

Jordanie: Koji, JH7FQK is momenteel actief als JY9NX. Hij heeft in = augustus zijn eerste 6 meter contact gemaakt met Europa, IT9IPQ. Koji is = razend enthousiast over 6 meter en zal zeer zeker vaker actief zijn. QSL = via zijn eigen call. Pete, N3FNE is actief als JY9NE met een Alinco = DX-70TH en een dipool. Pete is niet al te vaak actief op 6 meter daar = hij met zijn bescheiden station niet door de QRM heen komt op 50110 kHz = als er grote openingen zijn. QSL via zijn eigen call .=20

Kazakstan: Valery, UN3G is vaak actief op 6 meter vanuit het vak MN83KF. = QSL via DL4BBU.

Taiwan: Richard, BV2DP is sinds mei 1991 actief op 6 meter vanuit het = locatorvak PL05. Hij heeft de beschikking over 100 Watt = uitgangsvermogen, en een 6 elements HB9CV en een verticale antenne voor = 6 meter. QSL via P.O.Box 32-144 Taipei Taiwan. R.O.C.

Turkije: Omari, 4L5O is actief vanuit het vak LN21JR. QSL via TA7A.

Verenigde Arabische Emiraten: Almurr, A61AH is actief vanuit het vak =

LL75. Hij maakt gebruik van een Icom IC706 en een 4 elements Yagi. QSL =
via P.O.Box 4800, Dubai, United Arab Emirates.=20

AGENDA

Zaterdag 11 september, organiseert de VERON afdeling Helmond voor de =
15de maal een radiomarkt in verenigingsgebouw =91t Abdijke, Abdijlaan 2, =
te Helmond. De zaal is geopend voor publiek van 09.00-14.30 uur. =
Toegangsprijs is fl 4,--. Er is een inpraatstation actief met de call =
PI4HMD op 145,400 MHz.

Zondag 12 september de jaarlijkse HOBBYSCOOP ballonenvossenjacht.

Zaterdag en zondag 18 en 19 september wordt de UKW tagung gehouden in de =
Mannheimer Maimarkthalle te Weinheim, Duitsland.=20

Zondag 19 September 1999 organiseert de UBA sectie Noord Oost Limburg =
een eerste uitgave van de hambeurs " HAMRADIO EVENT '99 "'. Het wordt =
een radiomarkt met zowel nieuwe - als 2de handstoestellen en onderdelen. =
Daarnaast is er een gezellig cafetaria voorzien om een drankje te =
nuttigen of een broodje of een stuk taart te eten. De hambeurs wordt =
gehouden in 't Parochiehuis te Bocholt Belgie op het Kerkplein. Bocholt =
is een gemeente in het Noordoosten van Belgisch Limburg, vlak tegen de =
Nederlandse grens. De zaal is toegankelijk voor publiek van 10.00 uur =
tot en met 18.00 uur.=20

Zaterdag 25 september 1999 is er voor de 18de maal de =
Radio-onderdelen-markt, Antennemeetdag en Amateurtreffen van de VERON =
afd. Meppel, georganiseerd door de stichting R.O.M. Dit evenement zal, =
als altijd, worden gehouden bij wegrestaurant 'De Lichtmis' gelegen aan =
de A-28 tussen Zwolle en Meppel, afslag Nieuwleusen-Hasselt.

Vrijdag 1 tot en met donderdag 7 oktober wordt de Firato '98, de grote =
consumentenelektronicabeurs, in de RAI te Amsterdam gehouden.

Zondag 3 oktober, organiseert de UBA sectie La Louviere een amateur en =
informatica beurs in de Expo hallen te La Louviere, Belgi=EB.

Zondag 10 oktober de open dag van de Benelux DX Club, gehouden in het =
dorpshuis te Badhoevedorp.=20

Zaterdag 16 en zondag 17 oktober, Jamboree On The Air.

Zaterdag 23 oktober, de Dag van de Amateur, gehouden in de America hal =
te Apeldoorn.

Zondag 31 oktober, organiseert de Radio Amateur club drie provincien =
punt RACDPP een grote hambeurs "RAGETO" genaamd. Deze beurs vind plaats =
in Tessenderlo in het Technish Heilig hart Instituut, Heilig Hartlaan 16 =
3980 Tessenderlo Belgi=EB. De beurs is open van 9 tot 17 uur. Het =
inpraatstation ON4DPP is QRV op 144,5125 MHz. Naast een boeiende ham- en =
computerbeurs met talrijke deelnemers uit binnen en buitenland is er ook =
de mogelijkheid een hapje en een drankje te nuttigen.

Woensdag 3 november, de examens radiotechniek en voorschriften deel I en =
II, gehouden in de Badmingtonhal te Nieuwegein.

Zaterdag 6 november de Radiomarkt gehouden in de VEONN-remise te=20

Assen.=20

Zondag 7 november, organiseert de UBA sectie Torhout een hambeurs te =
Zedelgem Belgi=EB.

Zaterdag 13 november, wordt er door de UBA sectie Radio Club van =
Brussel, een hambeurs georganiseertd te Evere Belgi=EB.

Vrijdag 19, tot en met zondag 21 november, de HCC dagen gehouden in de =
Jaarbeurs te Utrecht.

Dinsdag 7 en woensdag 8 december, de examens opnemen en seinen van =
morsetekens 12 woorden per minuut gehouden in de badmintonhal te =
Nieuwegein.

Zondag 19 december de KAR hambeurs gehouden in cultureel centrum d'n =
Herd te Bladel.=20

Berichten of advertenties voor de ronde kunt u opgeven via Packet: =
PI4TIL@PI8SHB, via email: pi4til@amsat.org of telefonisch via tel: =
06-53616482.

<P>Zonne-energie wordt veel goedkoper</P></B>
<P>Aan de universiteit van Florida is men druk bezig met het ontwikkelen =
van=20
dunne-film zonnecellen. Ze zijn 100 maal dunner dan de huidige =
zonnecellen die=20
uit silicium vervaardigd zijn. Silicium dat uit proper zand gewonen =
wordt. De=20
nieuwe zonnecellen zijn tussen de 2 en de 3 micron dik. Ter =
vergelijking: een=20
mensenhaar is 70 micron dik. De dunne-film zonnecellen kan worden op =
glas=20
aangebracht. Het rendement is 15 %, dus 100 watt zonne-energie wordt =
omgezet in=20
15 watt elektrische energie. Het zal wel nog meerdere jaren duren eer =
die cellen=20
commercieel uitgebracht worden. Maar de vraag naar zonnecellen neemt =
alvast niet=20
af, maar groeit jaarlijks met 20%. </P><B>
<P>M5-prefixen weldra in de lucht</P></B>
<P>Zoals ik vorige weekr reeds meldde, zijn er grote veranderingen op =
komst in=20
Engeland: over enkele weken zullen de nieuwe A/B licenties van kracht =
zijn. De=20
bedoeling is de interesse voor het radio-amateurisme aan te vijzelen. De =
A/B=20
licentie call is M5xxx en die horen we dus binnenkort. Deze A/B licentie =
geeft=20
toegang tot ALLE amateur banden en krijgt men na een theoretisch examen =
en een 5=20
wpm morse test. Het vermogen dat de M5-licentie houders mogen gebruiken =
is 100=20
watt op de HF banden en 400 watt daarboven. De nieuwe regeling in =
Engeland moet=20
het radioamateurisme aantrekkelijker maken.</P><B>

<P>European DX-Contest SSB</P></B>
<P>De contest begint op zaterdag 11 september om 00.00 UTC en duurt 48 =
uur tot=20
en met zondag 12 september 24.00 UTC. Het doel van de contest is het =
werken met=20
stations buiten Europa op 80, 40, 20, 15 en 10 meter in de mode SSB. =
Klasse van=20
deelname: Single Operator, Multi Operator Single Transmitter en SWL =
klasse. Het=20
gebruik van DX spotting netten is toegestaan. De 10 minuten regeling is =
van=20
toepassing. Voor Single Operators mogen maar 36 uur van de 48 uur actief =
zijn.=20
De rustpauze mag in een periode of maximaal 3 perioden van 4 uur genomen =
worden.=20
De rustperiodes moeten op het summary sheet vermeld worden. Uitwisselen =
een RS=20
rapport. een volgnummer. Een station mag maar eenmaal per bande gewerkt =
worden.=20
Multipliers de landen van de DXCC en WAE lijst, buiten Europa. De =
multipliers op=20
80 meter mogen met factor 4 vermenigvuldigd worden, op 40 meter met =
factor 3, en=20
op 20, 15 en 10 meter met de factor 2. Men kan aanvullende punten scoren =
met QTC=20
verkeer. Een QTC kan door een station buiten Europa verzonden worden, =
waarin de=20
tijd, call en volgnummer vermeldt wordt b.v. 1307/DA1AA/431. Een maximum =
van 10=20
QTC&rsquo;s mogen naar hetzelfde station verzonden worden. De =
QTC&rsquo;s moeten=20
op een apart blad vermeld worden, met een vermelding van het station die =
de QTC=20
verzond en op welke band. Score: totaal aantal QSO&rsquo;s + QTC&rsquo;s =
maal=20
het aantal multipliers van alle banden. Logs insturen via E-mail naar <A =

Greetings all.

My name is Val Davis. I was a pretty good friend of Bill's during the last few years of his life.

I met him through rec.radio.broadcasting in 92 and continued that relationship through our move from Texas to Iowa where Bill stayed with my family several times. I have 6 kids and Bill could just waltz in here, pick up the baby and bounce him around without making anyone cry. My kids love him.

I provided Bill with some of the equipment he used to maintain the newsgroup and usually repaired his system for him when he had a crash. He moved to Minnesota a few hours north of me so he would come down every few months and we would fix, upgrade, or just hang out.

I posted the memorial on the airwaves.com website and I am currently working with Pat Townson (the guy who taught Bill about newsgroups) on keeping the newsgroup going.

I have been in contact with several of his friends and we have been discussing the future of rec.radio.broadcasting.

One idea that was brought up was that of rotating the responsibility.
I have two jobs and 6 kids so bandwidth is an issue.

We will let everyone know our intentions through the airwaves.com website.

Also, we do not have information yet on a funeral. Bill's body is being held by the county pending contact with a family member. Bill had only one living relative (a half sister) and they are trying to locate her.

We do not know how the funeral will be handled, but I spoke with Bill's fiance this morning and we discussed a memorial fund to help cover funeral expenses.

Any and all responses are welcome.

Thanks very much.

Val Davis

I read an advertisement of one on sale for $109.00
(a savings of almost a $100.00 off the list price!)

Fortunately, for you, a quality receiver such as the
one you use was available at a pawn shop; unfortunately,
for me, the only shop in 30 miles does not have one
on the "for sale" shelves.

A person can handle a fair amount of G before losing conciousness. Usually, in a General Aviation airplane, it will pull apart in flight before the pilot will pass out....that is one of the big differences between military airplanes and civilian types....the pilot is stronger than the plane.

The exposure to high G in this case was for less than 1 minute, and with the pilot being in reasonably good condition would still be very aware of what was going on.

And the "point" was to point out that common sense would cause the most casual observer to get past the "numbers" and understand that the "forces" contained in your assertion are relatively diminutive.

At 60 mph, which is basically what your claim was, most of us saw that a claim of loosing conciousness, (no matter how you tried to bolster it with extraneous data) was still pretty thin.

The "argument" of certain forces on the body under some conditions IS probably true, but NOT in this case.

Typical limits on a light aircraft are +3.5 to -1.5g. The aircraft is
unlikely to come apart unless these limits are SUBSTANTIALLY exceed.

It is very easy, especially after dark, and without visual cues to
establish a very high descent rate without pulling significant G
forces. 4700fpm is 79 fps. A .1G acceleration downward for 24 seconds
will do it...Neither passengers or pilot are likely to recognize it.

I've set up a proposed new design for the http://hamradio-online.com web site.
I've added an online poll to seek your input on the new design - please visit
http://hamradio-online.com and give me your feedback - Thanks!

I'm also proposing to open up sections of this popular web site to volunteer
editors who could own their own sections on special interest topics.

Finally, I've just launched a new, very much improved, online discussion forum
and I'd like to see your feddback on that too. Post your comments on the
Discussion forum at http://hamradio-online.com

Thanks! 73, Ed, KF7VY

The Icom Q7A wins hands down. It has better audio, great sensitivity,
and much better scan perfomance. Plus if you use the programming
software you can listen down into the shortwave frequencies.

Good luck,
Ed

The VX-1R has an alphanumeric display, and it is half the size.
The better radio is the one you like. Buy one of each, then give the one
you don't like to your wife/girlfriend.

I AM POSTING THIS MESSAGE TO THIS NEWSGROUP AS I SEE ROLAND GETER CONDUCTING BUSINESS ON THIS NEWSGROUP. IT IS MEANT AS A WARNING TO THOSE CONSIDERING DOING BUSINESS WITH ROLAND GETER, I AM NOT LOOKING FOR FLAMES, REPLIES, ADVICE, ETC...THANKS

Hello Everyone,

On August 26, 1998, I posted a warning message about doing business with Roland S. Geter, Sr., WB6LNA. Mr. Geter posted a "wanted" message on the newsgroups in late June, 1998 for laptop computers for a "law enforcement" project. I e-mailed him about a Toshiba Pentium notebook I had for sale that was not working and needed minor repair. I specifically explained to him what was wrong with the notebook, we agreed on a price and Roland Geter agreed to pay shipping. He requested Fed Ex C.O.D. shipping, since he "did a lot of business with the shipping depot in Phoenix Arizona" and things would go a lot easier. It cost me $132.58 in shipping and C.O.D. charges to ship the package.

I shipped the package as per his specifications and request and advised him of such. When the package arrived in Arizona, Roland Geter failed to pick up the package as requested by Federal Express several times. After several days the package was returned to me less my shipping charges I had already paid.

After that, I contacted Roland Geter several times by e-mail and phone to no avail. He always told me he was sending payment but never did. I finally took further action in late August, 1998. I posted the original warning message, contacted the proper authorities and filed a formal complaint with the Maricopa County Sheriffs' Office in Arizona. Roland Geter had stated to me he was a deputy with that sheriffs' office, (which later proved to be false).

After a lot of pressure from many on the newsgroups and the sheriffs' office, Roland Geter contacted me in late September, 1998, to call a "truce" and settle our dispute. I had received several e-mails from others who had been ripped off by Roland Geter so he agreed to pay me and then "square up" with the others. At that time I also agreed to stop the pressure from the newsgroups and the sheriffs' office.

To make a long story short, to this day I still have not received my money. I have tried to contact him several times a week to no avail. The others involved also have not received payment. I made the mistake of not doing a search on Deja News about Roland Geter, if I had, I would have found many others who ended up with the same fate as I did with my business dealings with Roland Geter.

I am posting this message to warn others of Roland Geter's bad dealings, i.e. bad checks, failed payments, bad trades, etc., that he has done to many, many others and myself. Do yourself a big favor, do not deal in any way with Roland S. Geter, Sr.

Piero

Absolutely right! I've tested both radios and sell VX-1R. Icom is the
best miniradio, keep in your mind about Li-Ion battery cost of VX-1R.
Program software is free from Vlaski Goran. Super RX 0.5MHz-2GHz -
WOW!

Hi. I'm looking for OLD electronic musical equipment from 1950-1990, ANY CONDITION, broken or parts units ok:

SYNTHESIZERS
KEYBOARDS
DRUM MACHINES
SEQUENCERS
VOCODERS
EFFECTS PROCESSORS
MIDI EQUIPMENT

Knobs and dials preferred but not necessary. The older and more unusual, the better.

MOOG, ARP, Roland, Korg, Sequential Circuits, Oberheim, Yamaha, EML Electrocomp, EMS, Steiner-Parker, Ionic, PPG, Synton, Maplin, Univox, Bode, Aries, Paia or anything similar.

Roland TR-909 Rhythm Composer
Roland TR-808 Rhythm Composer
Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer
Voyetra Eight polyphonic synthesizer module
Oscar with or without MIDI
PPG Wave 2.3

For a better idea of what I'm looking for, please see:
http://members.aol.com/rolandman1/index2.html

Please email me at rolandman1@aol.com if youve got anything youd consider parting with or know someone who might. Please be sure to include price and condition. Thanks in advance and sorry if this message annoys anyone.

```

An analogy:

Why does your local Catholic or Anglican Church need a standing choir? You need a group to sing two octaves higher than those singing hymns in scratchy alto pitches from the pews! In like manner, Strom's voice is somewhat like a choir; it is high pitched, not too far from your "weasely" interpretation, with ranges from a sissified tenor to a more manly soprano. Such a voice also happens to be much better than the dull, lifeless, monotonous pitch bellowed by the man in the pew, William Pierce.

By no means is this post to be (mis)interpreted as a personal attack or smear, even though both of them need to exercize a little more self-discipline at times AND to accept constructive criticism from objecting parties.

If you would have bothered to read the related earlier posts, you would
have seen there were other costs incurred in the shipping besides just
the FedEx charges. You would have also seen in the original posting you
replied to that Roland Geter AGREED to the costs involved before the
package was shipped. Roland Geter is a creep, he has ripped off more
people on these newsgroups then you could imagine. Be thankful this
guy is warning the rest of us so we don't get ripped off. Why don't you
get into a business agreement with Roland Geter and find out for your
self.

HAve had both, as well as Standard C-508a,resulting in a certain experience in such matters.... I like the C-508 very well.... nice RX, decent audio (for it's size), and AA battery convenience.... I like the Q7a for all of the above, Plus 30-50 MHz coverage RX (fire depts here are Low band still).
I had a VX1-r approximately two weeks....performance was good, nice audio, Lithium Ion batteries work well,but with this size rig,I do like the convienence of picking up spare power at the corner drugstore if you run out in a bind.....the BIG fault with the VX-1 is the inability to scan frequencies at VHF and UHF at the same time, unless they are programmed by computer...this omission makes the VX1r totally unsuitable for my needs....as you can tell I use my mini ht as a scanner as much as a transciever-the Q7 is ideal for this due to the frequency coverage.... they do act like a wireless Mike in conjunction with a nearby crossband radio....and that works very well... but 300 Mw is only gonna go so far.....
73 and as always, your mileage may vary....

HAve had both, as well as Standard C-508a,resulting in a certain experience
in such matters.... I like the C-508 very well.... nice RX, decent audio
(for it's size), and AA battery convenience.... I like the Q7a for all of
the above, Plus 30-50 MHz coverage RX (fire depts here are Low band still).

I had a VX1-r approximately two weeks....performance was good, nice audio,
Lithium Ion batteries work well,but with this size rig,I do like the
convienence of picking up spare power at the corner drugstore if you run out
in a bind.....the BIG fault with the VX-1 is the inability to scan
frequencies at VHF and UHF at the same time, unless they are programmed by
computer...this omission makes the VX1r totally unsuitable for my
needs....as you can tell I use my mini ht as a scanner as much as a
transciever-the Q7 is ideal for this due to the frequency coverage.... they
do act like a wireless Mike in conjunction with a nearby crossband
radio....and that works very well... but 300 Mw is only gonna go so far.....
73 and as always, your mileage may vary....

HAve had both, as well as Standard C-508a,resulting in a certain experience in such matters.... I like the C-508 very well.... nice RX, decent audio (for it's size), and AA battery convenience.... I like the Q7a for all of the above, Plus 30-50 MHz coverage RX (fire depts here are Low band still).
I had a VX1-r approximately two weeks....performance was good, nice audio, Lithium Ion batteries work well,but with this size rig,I do like the convienence of picking up spare power at the corner drugstore if you run out in a bind.....the BIG fault with the VX-1 is the inability to scan frequencies at VHF and UHF at the same time, unless they are programmed by computer...this omission makes the VX1r totally unsuitable for my needs....as you can tell I use my mini ht as a scanner as much as a transciever-the Q7 is ideal for this due to the frequency coverage.... they do act like a wireless Mike in conjunction with a nearby crossband radio....and that works very well... but 300 Mw is only gonna go so far.....
73 and as always, your mileage may vary....

Honestly-
this message was bounced back to me by my ISP.....showed an error 441-
server error....
I had no idea it was being posted every time......
ISP has been notified of this, as well as other recurrent errors.....

sorry

Bill, N3DDY

August 11, 1999 is the day of the total eclipse -- a very important event this particular year, with the solar maximum so close. Radio Hobbiests are invited to observe the Audio Eclipse. Please visit http://hfradio.org for links and information about how you can participate.

Of course, you can find other great resources on my page, as well. The Amateur / SWL site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more. You can even sign up for a free website.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

73 de NW7US, Tomas.

Heya,

I picked up a radio shack BTX-123 Business Band 2M radio... the manual =
says
the freq's are limited to 1511.225 to 156.250.  Its a Xtal controlled =
radio.

Would it be possible to add xtals for a 2M ham freq in this radio =
without
making any mods? or is there even a mod available??

Please e-mail the reply!  dylan@newsguyla.com
thanks

Looking for a 2-meter handheld for a Tech class person who's had a stroke
and has limited use of her fingers.  Can use PFF and turn reasonably sized
knobs (1/4" or so), but not push buttons very well.
```

A friend used to have a FT23 that, seemed to me pretty straight-forward and goof-proof.   Are there other models around, don't need more than 10 channels, extended Rx is NOT necessary, but PL tones are. DTMF optional. Don't need UHF.   Looking for something not too fancy (translated: not too expensive), need not be new IF it works.

Is EBAY a good source for buyers?

Pls reply to marnells@snowcrest.net

I have mirrored the RA file from NASA - it is of the Black Sea Capture of the Total Eclipse. You can see it not only at NASA's site, but at http://hfradio.org.

Of course, you can find other great resources on my page, as well. The Amateur / SWL site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more. You can even sign up for a free website.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

You CANNOT miss this deal if you are looking for a UHF/VHF HT!

I have for sale the following items-
An Icom W32A HT: The radio is in MINT/PERFECT condition! It has NO dents, scratches, or other damage and no signs of wear. I have all of the ORIGINAL documentation, including the manual which came with the radio. I have its ORIGINAL box and all the paperwork for it. I purchased it from Ham Radio Outlet in New Castle, Delaware about 1 year ago. I am the ONLY owner of this radio and it was used as a backup radio. The radio has had VERY LITTLE use and the battery has been charged and discharged only twice. I have performed NO MODS at all on the rig.

That is not all, however!
I am looking to sell with the radio-

An MFJ Dual Band 144/440 MHz Antenna which works well with the radio (model MFJ-1724B). I have the original packaging for the mag-mount antenna and it is in very good condition.

A MAHA Speaker/Mic which also works well with the radio (model MH-800). I have the ORIGINAL packaging for the spkr/mic as well.

An ICOM Power Cable which supplies power to the unit from another power supply or from a car�s electrical system. A cigarette lighter attachment can be added for more portability. This power cable runs the rig AND charges its battery. It is double-fused and in good condition.

A Radio Shack Discone Antenna for outdoor use. The antenna has very wide receive and transmits on 2m and 70cm (440). Please note that I DO NOT have the cable for attachment between the radio and the discone antenna. That would have to be purchased/made separately.

If at all interested, please contact Mark at hr_rig@hotmail.com I am an individual selling one unit with all of these accessories. I AM NOT a reseller. Please feel free to email any questions, concerns, or requests to that email address as well.

All serious bids will be considered!

Mark - hr_rig@hotmail.com (if telephone works better, please email me here and we can set up a time to talk!)

ps. Of course, the wall charger, rubber duck antenna, and all other accessories which came with the unit are included. I even have the belt clip and wrist strap STILL IN THEIR ORIGINAL, FACTORY SEALED POUCH!!!
Email me soon... hr_rig@hotmail.com

For Sale or Trade-
Kenwood TM-261 2 meter mobile
~1 month old
Will sell for best cash offer or trade towards 2510 or Linear Amplifier.

Ideal for some freshly licensed technician, eager to join in with other
arrogant little whining pissant amateurs. This radio, combined with your

posts to rec.radio.cb allow you to spread atagonism, arrogance, and
misinformation to multitudes!!!!

Also suitable for decent people still suffering from delusions of
entering a hobby where courteous and friendly people are willing to
humbly offer advice or learn something new.

Prefer a local transaction in the greater DFW area.
Email: quantum_dots@hotmail.com

Thank God I bought my Cobra first!!!!!!!!!!!!!!!!!!!!!!!

I don't know how many of you know of this, but I think you should consider joining this project with SETI (the SETI@home project). Major COOL!

What is the SETI@home project?

SETI@home is a scientific experiment that harnesses the power of hundreds of thousands of Internet-connected computers in the Search for Extraterrestrial Intelligence (SETI). You can participate by running a free program that downloads and analyzes radio telescope data. There's a small but captivating possibility that your computer will detect the faint murmur of a civilization beyond Earth.

http://setiathome.ssl.berkeley.edu/ is the URL - check it out.

Also, if you are interested, once you install the software, you might wish to join our group, the NW7US Radio Group -- you'll find us under the groups section.

Ok, this sounds interesting, but what an alien computer virus invading
your PC?
HA?, then please check my page.

Thanks

Arthur

I have a Kenwood TM-742 Tri-Bander. Recently it was working great till I pulled into a parking lot and went into a office for about 30 minutes. It was working great to say the least before I turned it off. When I came out it wouldn't start back up. It is getting power. The 4 group wires to the control head, and the Display are ok (Ohm out great). Everything looks ok. Just not starting up. Has anyone seen this before? Need help. Don't know what to do. I have been slow at work and can't afford to take it to Kenwood. Can anyone help me please

Are you using the cigarette lighter plug (not recommended) to power it? What gauge of wire are you using if not? The larger the wire the better. If it is hooked directly the battery (recommended) make sure those connections are secure.

Do you have a hefty enough power supply to test it on the bench if none of the above are applicable?

i have seen kenwood 732's wired directly to the battery do that
a couple of times. had to unplug and replug the pigtail that is
about 6 or 8 inches from the radio. do not know why but have
seen it on about 3 different installations.

The manual that I have shows listings for several modules for this
tranceiver. However, I am wondering if anyone has or has convertd a
module for the 726 for 1296 Gig. I would like to know of availability
if such a module is available...

Tnx in advance

But the KEY POINT (according to FEMA's consultant) is that the re-radiated energy builds up IN PHASE because the point at which new radiation is being generated is advancing just as fast as the newly-generated wavefront is propagating, i.e. at the speed of light. This is what gives the EMP its very sharp wavefront and wide bandwidth, which in turn is what makes bypassing and shielding tricky.

I want to warn everyone that this man, Jim Bonner, is not to be trusted. He advertised a /\/\ VHF HT1000 and I sent him a postal money order the next day on 5/6/99. He told me once that he received the MO and was shipping the unit Friday, 2 weeks after I sent the MO. After a week, I emailed again. He said this time he would be sure to send it that day. I called and he gave me an excuse about an ill family member that kept him from sending it. He also assured me he would now send it and forward tracking numbers. He didn't. Finally I tried to call him and I guess he was on the phone and used call waiting and accidentally answered my call and said it would be shipped. He hasn't answered the phone since.   Then I heard nothing for another week. Finally a month ago he emailed that the scan function had died on the radio and it had been in the shop the whole while and that the money would be sent back. I wrote him a week ago and said if I didn't see it in 7 days, I would do just this. A warning to the newsgroups. He goes by Bnn801@aol.com and jbonner@firefilms.com . I made every effort to let him return my money, instead he tries to pawn off some other radios I guess with no intent to return the money. I hope this embarrasses him and informs you. I know that when you sell over the internet, you take risks. This one bit me. I know not everyone is like him, but those that are do exist and don't care about what is right. I haven't completely given up either. There still is a way to get my money back through the Post Office fraudulent claim procedures. Then they go after him. As one last token to fix this, I offer to erase this message if I do receive my money from him. Until then, he may see this a few times. Jim, all I wanted was a fair deal. If you weren't going to send the radio, be man enough to send the money back, like you told me you would.

His address is

Jim Bonner
2740 E. Ann St

I polled the fitness newsgroups to see if they knew of any standard bicycle stands for indoor use. I'd seen one with a 4" squirrel cage fan for dissipating the power thus using the bicycle's gears to adjust the pedal resistance. I figured we could yank the fan and drop in an alternator, etc. One respondent to the poll pointed me to:
http://www.nashbar.com/catalog/bike/display_html/bikeindex.html
Maybe we can come up with a simple adaptation. I'm crossposting to some amateur radio groups to see if anyone there has done this modification already. Any good ideas out there?

Hi folks :) I'm an electronic musician *seriously* looking for the following
musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS                 (from the 60's-80's)
-OLD KEYBOARDS                    (w/ knobs or sliders)
-OLD DRUM MACHINES
-OLD SEQUENCERs                   (w/ knobs for each step)
-OLD VOCODERs                     ("robot-voice" sound)
```

-MODULAR PATCHABLE SYNTHESIZERs
-RACK SYNTHS
-INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML,
Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion,
Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline
-Roland TR-909 Drum Machine
-Roland TR-808 Drum Machine
-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer
-Pearl SY-1 Syncussion
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack
-Oberheim Xpander
Simmons SDS V electro drum brain
Simmons SDS7 Digital-Analog Drum System (brain only)
Roland Jupiter 8

For a better idea of what I'm looking for, please visit:

http://members.aol.com/rolandman1/index2.html

If you have any of the above OR SIMILAR for sale or know someone who might,
please email me at rolandman1@aol.com and include phone number as well if
you'd like.

Thanks in advance and apologies if this post annoys anyone.

Dear Fellows,

I need your help. I was attempt to make FM Receiver for 108 MHz and up
(actually necessary 120.50 MHz receiver for my handmade plane to hear
tower broadcast). But all trys was failed.
I try to do receiver on TDA1220B, but it do not work well.
If you can, please, send me Receiver scheme. Or give me any suggestion.
I'll be very thankful.

My e-mail mailto:nova@kaunas.aiva.lt

Your Sincerely
Edgar.

Edgar,

That aircraft frequency is almost certainly AM (not FM). At least here
in the USA it is AM, and I assume also in your country.

Good Luck,

Hans, K0HB

I am looking for a cavity notch filter or plans for building a notch filter. I am not sure if a single notch filter would be tight enough. I am trying to notch out a undesired signal in band. I run a UHF repeater and I have a bad desense problem. I use a good bandpass notch duplexer and have added a DCI bandpass filter (the repeater is in a very high RF environment). I just found the source of my problems, in band. A near by amateur UHF packet station. I need to notch out this frequency that is only about 1.8 MHz away.

Any ideas???

Mike

You are certainly correct Hans.  ATC frequencies are AM worldwide.  I have
worked in ATC facilities in Europe, Asia, and all over the U.S.

YEAH YEAH YEAH!!!!!

Only thing is, it ain't the "soviet union" we have to worry about now, its the Communist Government of China and their multi-hundred million man army.

Of course, they are nice to talk to on the radio when big brother isn't looking over their shoulder.

Hawke

Several of us HAMs recorded what we could hear of the final transmissions from WNU and KFS today, of CW. This historic event is captured in four files from my site: http://hfradio.org -- the recordings are rough. I'm gathering other files from others... as time goes forward.

That's a shame; KFS was 599+ on 17.184.8 MHz here near Chicago. I didn't
think to record them. I have a mini-disc player recorder handy, too.

Michael.

Well, folks, now I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only.

And, of course, you can create maps, check dx, propagation, and more, at the http://hfradio.org site.

Thanks for posting those frequencies and times. I gave it a listen,
but on all they were just too weak. But I heard it and that is what
counts.

I was wondering what is the maximum voltage battery pack I can use on this radio? Does the battery pack from a HTX-202 fit this radio? Can I use the radio while it is charging? Can I hook it up to an external 13.8V power supply? Sorry for all the questions but I am fairly new to Ham Radio and just bought this radio used with no manual, so I wouldn't want to break it first thing.

the max voltage for the IC-2at is 8.4 volts unless you have the 12v adapter pack with it. yes the 7.2 volt HTX-202 packs will work fine with it.. the HTX-202 was redeisgned from the ICOM IC-O2AT.

My -2AT manual doesn't specify a maximum voltage, but the BP-5 battery
supplies 10.8V (and 2.3W RF out), so at least that much is acceptable.
I don't think it's intended to be run direct from 13.8v.

I haven't tried it but I've read that batteries are interchangable
with the HTX-202.

Manual says NOT to charge battery while radio is on.

the IC2at requires an adapter to be used with it in order to run 13.8v.. the 202 is based on ICOM's IC-O2AT design.

Greetings

At approx 15.00 yesterday15.7.99 we tripped our counter over the 10,000 mark. I would like to thank all those who came by to view our new and improved site.

I would also like to thank Charles Penrose for doing the work as well!

If you have any suggestions, press cuttings, circuits or articles, please email me and I will add them. If you want to do so secretly, fair enough, many of our members play on both sides of the fence.

Our new and updated links page will take you to some interesting and weird things {I before E except after C.......weird!}

Download the complete Radio Ham in .mp3, and you can tell that Ray Galton and Alan Simpson, the writers, must have known a radio ham before they wrote the sketch!

Hello

AirNav Guestbook page has been updated.
With the contribution of many users it is now possible to know what they
think about the program.
More than 50 opinions some of them very interesting!

The page is available at:

http://www.airnavsystems.com

followed by the Guestbook link (column on the left).
Hope you enjoy reading their opinions.

```

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-OLD SYNTHESIZERS	(knobs & sliders pref but unnecessary)
-OLD KEYBOARDS	(1960's-mid 1980's)
-OLD DRUM MACHINES	(Roland TR-909, TR-808, TR-606, etc)
-OLD ANALOG SEQUENCERS	(with knobs for each step)
-OLD MIDI gear	(rackmount synthesizer modules)
-OLD VOCODER	(robot-voice effect)
-MODULAR PATCHABLE SYNTHs	(ARP 2600, EML-101, System 100m, MS20, etc)
-OLD EFFECTS	(filters, ring mods, phasers, delays, etc)
-Roland TB-303 Bassline	

MOOG, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, ANYTHING SIMILAR, especially more unusual stuff.

For a better idea of what I'm looking form please go to:
http://members.aol.com/rolandman1

Please email me privately at rolandman1@aol.com if youve got anything like the above or know someone who might. Please be sure to include price and condition. Thanks in advance, sorry if this message disturbs anyone.

ARP Sequencer
Tonus ARP model 2600 Synthesizer
Mutron Biphase dual phaser
Opcode Studio 5 LX MIDI interface

Well, folks, now I am offering free web pages on the domain hfradio.org -- if you need a place to hang your hat, please consider creating your homepage at http://hfradio.org -- already have some taking up the offer... why not you? Free, after all. No ugly watermark images floating about, or obnoxious banner windows popping up every time you move around.

Need a place for your club website? Your special dx-pedition? Your homepage? Simply fill out the form off of the main page at http://hfradio.org/

Your page address would be http://hfradio.org/yourcallsign/ -- and you can have an email address alias of yourcallsign@hfradio.org. Free. For non-commercial ham sites only. If you need a commercial site, or need custom solutions, let me know with the online form.

And, of course, as always you can create azimuth maps, check dx, propagation, or swap and shop. And more. At the http://hfradio.org site.

73 from NW7US

P.S. R1AND - Antarctica, has been heard on the East Coast today. On 1833 KHz. WOW. And I see 50 is open (6 meters). Is this a sign of a hot season!?

Hope I meet you on the air. I hang out on 20, 15, and 10.

Hello

Many news this time that will make AirNav Flight Tracking more interesting. The new updates will give you much more information on the tracked flights. All is available for download at

http://www.airnavsystems.com

followed by data files link.

New Aircraft Database: now with 14400+ with aircraft registration, aircraft type, company and selcal.

New Callsign Database: 9150+ flight numbers and routings.

New maps for european users available for download.
AirNav Manual is now translated in italian.
All these updates were only possible with the important help of many AirNav users.

Really hope this is of your interest.

Best regards, Andre Brandao

Fellow Hobbyists,

A local Elmer told me that a Grundig YB 400 is reasonably inexpensive yet a quality receiver. I understand it encases a 40 station memory, dual alarms, and a data monitor. Do you own one? What is your opinon?

Reasonably.  I got mine for approximately $125

>yet a quality receiver. I understand it encases a 40 station memory,
>dual alarms, and a data monitor. Do you own one? What is your opinon?

It seems to work well, it brings in signals clearly, the instruction
book is fairly easy to understand, being a klutz I've dropped it
several times and yet it's still working... I feel I've gotten a
good buy.

Yup! I got one! Picked it up for $50 at a local pawn shop.
Damn fine radio it is too.

Enjoy

Taliesin

Indeed, it may have worked for you, a conspiring member of a very small world population minority, including North American citizens like yourself. But it does not work for by far the great majority of the world's population. It is they who have been robbed.

But, of course, the remainder of the world's very sensible, intelligent, better educated population do not expect you to admit it. It goes against normal human (aggressive) nature. So don't worry about it.

Reg, G4FGQ.

Anybody help with opening up the transmission, range currently
144-146mhz needs to go down to 143-146

many thanks

Alan

No, it didn't.

"Moscow as watched Washington get through $32 billion on SDI since 1983, while investing little itself in a response, according to Velikhov. Thus the idea that SDI was simply a ploy to hasting the economic demise of the Soviet Union makes him chuckle: "It was a good idea, but really we were quite capable of bankrupting ourselves".

What does this have to do with rec.radio.amateur?

Hi Dave,
Do not worry, there is some defanse.
You must made rotating high-frequfency shield.
You can made it with tree of Tesla's coils.
Every secundary put on next primary, and made one circle.
Everything must be in resonantion state (all of coils).
All the best,
Proka

Please Remember the "Wintone Buyer Beware" messages that were posted
about a year ago in these groups.  This guy doesn't give you the
serial number when you pay for the program.  I paid about a year ago
to have the program sent to me on disk and haven't received it YET.  I
did email the guy and he did send me the serial number but I never
receive what I originally paid for and that was a registered copy to
be sent to me on a disk.  I do feel luck though because I know other
people had this problem and never got their serial number for the
program.

Weird, I have a pentium 133 with only 16mb of ram and it has run just fine,
so not being a computer genius I won't even tread any further.

Reg, you're not stupid so why insist on being ignorant???
Have you NO knowledge of history? Even that of this century?

How many despots did dear old England have to endure for
centuries before the populace rose up and demanded some
resemblence of humane treatment? How long did we "North
Americans" try to ignore the Nazi threat, stay out of it and
let your "nature" take it's course before we came to realize
that the threat was not just to those on the other side of
the pond? How many repeats -of history- does it take to drum
some sort of knowledge into any human? Fortunately not an
infinite number for some of us. Not so sure about you.

We have learned that the undesirable traits in human nature tend to try to dominate the desirable-so we must remain eternally vigilant so that the Hitlers, Stalins, Pol Pots et al are nipped in the bud, and not at the cost of millions of innocent lives.

Yes--Milosevich, too, is an "educated man". So what does that help?
Did he "rob" anyone???

73, Dick

>it is they who have been robbed.

Evidently you don't know anything of economics or the workings of a capitalistic economy... Money MUST be spent for the economy to survive, and LOTS of money must be spent for it to grow.

From college economics of the 60's, I recall that "a dollar spent generates seven dollars" by the time it has circulates through the economy. Who knows what that figure is now? We MUST have huge spending projects such as the B2 bomber at a $billion per copy and other huge spending projects which integrate "high tech" into--and keep it in-- our everyday economy in order for the economic expansion required --no, DEMANDED-- today to endure. Examples are HDTV, the personal communications explosion and Star Wars, to name a few. Forget giveaways to foreign countries, tho it's sure they will continue unabated, but those dollars do nothing for OUR economy. The dollars spent HERE are what counts.

Speaking as a total idiot when it comes to economics: What kind of BULL
is that? Inflation aside, as far as I know, wealth is not created or
destroyed, just redistributed. With a trade deficit, the only meaning I
can infer from your statement is that each dollar inflates 700% by the
time someone gives it back in taxes.

This doesn't feel right, so please explain.

Michael.

Randall,

I think you got your URL wrong. It should be:

http://members.xoom.com/frg9600/500.wav

This is the clip that has KK7HO discussing a
contract killing price with K5BLB. They were
on 3.950, the frequency occupied by W1WCR,
the intended victim of their threat.

It's illustrative of the character and mind of
Tim Volz, KK7HO. So take what he claims
with a grain of salt.

Question: from whom was Bill Gates' wealth redistributed?

Wealth is most certainly created... ever hear the term "economic growth"?

So why do US citizens refer to themselves as 'americans' ?

They do not yet own the whole continent.

After all, Cubans are americans.

U.S. citizens? The proper name of the country is the United States of America. How they refer to themselves is irrelevant. Your implication that all use this moniker and that by this use there are no other Americans outside of the USA is silly

You forgot Canada (which by the way has far more land mass than the USA), all the various sovereign Indian nations, Haiti, and Costa Rica to name a few.

Keep trying, you'll eventually get it.

Chuckle. So are our fine and justly proud brothers the Canadians. But
call one an "American" some time and note the reaction you get.

Hello again all,

Yes, there has been loads of activity on the homepage. I have recently added an FM narrow-band RX that is about the size of a cigarette packet and has space to add prototype circuits, such as R/C of models, AF amplifier, data decoders, etc. the set is ideal for HF FSK and will work on any frequency up to 100MHz or more. Naturally there is a PCB layout and component overlay to download and the project is well photographed.

Following many requests I have also added info on building an antenna tuner with a few hints on other methods. Forgive me for not taking this subject so seriously, but all the info is accurate, complete with photograph. Do not be put off by chapter titles such as "ADDING KNOBS" but I feel an

ATU/ASTU/ASCTU is a waste of effort on 90% of cases.

The technical message board has seen loads of activity about all aspects, including whether the Reflux still should have the coolant fed to the reflux condenser or the final stage alcohol condenser first. What are your views? I think it is a bit like asking whether the propellor should be mounted at the back of the aeroplane pushing or at the front pulling. Whichever way the still works fine and produced some high-grade alcohol.

The electronic calculator was extended a few weeks ago, thanks to the HTML advice received from another newsgroup. Now that i can handle square-roots I have added frequency and coil-winding calculations to the tables.

I have also received loads of E-mail asking how I draw my circuits and PCB foil patterns. there is a page there with examples that explain everything, right down to the keyboard keys to push. Do not expect any high-tech answers because it is very basic and simple. No software, No code, No preaching about products. you have all the software you need in you basic computer.

Well, there is the latest news, sorry there is not too much of it at the moment. Best regards from Harry

Just one more bit of news, I have also added T and Pi attenuator
calculators to the radio calculations page. Both are even calculated in
both unballanced and ballanced forms.

ScheiBe... I thought for a moment by that header I could find some
recipa's for Rocketfuel....and I'd seen fuckin' radio's?!

Certainly, wealth is created daily... If it were not then the increased billions of population alive today who were not alive four thousand years ago would never see a single dollar in their entire lifetimes, nor would they have even a scrap of cloth to cover their nakedness... Yet, we have the most wealth in circulation today that we have had in 4000 years of recorded history...

Denny

Guess it depends on how ya look at it! THERE is NO real backing for the
earthly things we so covet including "money". The ONLY backing for the
paper money we circulate today is our belief that it WILL buy something
tommorrow! Period.... How long in our present state of affairs will it
last? Sparks my two cents worth...

>This doesn't feel right, so please explain.

Dick's right, and it has nothing to do with inflation, but it requires some background in economics to understand why this is so. Money is fungible, and elastic, each time it changes hands it has an economic effect. I can't give you an economics course in a post, but let me try to give an example which might make things a bit clearer. Lets suppose the government spends 1 million dollars a year in each of two different communities. In one community, it spends the money by giving 500,000 people each $2. In another community it buys 1,000 high tech widgets that cost $1,000 each from a local company. Which will have a bigger impact on the local economy?

You seem to be saying that the two expenditures will have the same effect, but they won't. In the first case, people will buy a hamburger, a pack of smokes, or a bottle of Ripple with their $2 windfall, and that's basically the end of the story. The money is dilute, and goes for basic items with little or no multiplier.

But in the second community the company hires engineers and production staff to make the widgets for the government. Each of those people make good money and buy a house, a car, furniture, a new TV, etc. The contractors building the houses, the car dealers, the furniture makers, etc all hire people to produce and sell these items to them. Those people in turn are able to buy relatively big ticket items too. So the dollars turn over in the economy several times over the course of a year instead of once or twice because the wealth is distributed in larger chunks and can have secondary and tertiary effects in the local economy as it cascades through it during the year.

In high tech high wage areas, the multiplier in the local economy is often seven times or more. You get a "boom town" built up around the high tech industry and the businesses which cater to the workers of that high tech industry. In low tech low wage areas (ie mill towns, farming areas, etc), or with poverty program giveaways, the multiplier is low, generally less than two, so those areas remain depressed compared to the other town, though the same amount of money has been injected into their economies by the government. The difference is that in the former case the money is in large enough lumps to generate job producing secondary and tertiary economic activity while in the latter case it is so dilute that it has little secondary and tertiary impact (or quickly becomes so concentrated in a few hands, ie the mill owner, the company store, etc, that it can't be spent again fast enough in the local economy to have a major impact).

Economists say that money has "velocity", meaning that it moves through the economy at a certain rate. Money in larger chunks retains its velocity better than money that's finely dispersed. It can be said to have an "inertia" proportional to the size of the chunks. This lets it have a bigger impact at each level as it cascades through the economy. There is a size that is so large that it can't easily make it through the porosity of the local economy, however. In other words, a rich man can only watch so many TVs, drive so many cars, or get so many haircuts. So the multiplier again falls when the chunk size passes a certain limit.

There's a size range where the money will retain maximum velocity in the local economy, and have the largest multiplier effect. This can be calculated fairly closely by econometric models. The peak is roughly when the primary wage generated by the injected capital is in the range of $50,000 to $150,000 a year. That's large enough to spur big ticket purchasing activity, but small enough that the money can easily be spent locally. It also happens to be in the range paid by makers of military hardware, which means that the government's buying of big ticket military goods is a spur to the economy.

It then doesn't matter if the hardware gets parked in a desert, or is sent to the scrapyard, or is shot to the Moon. It has already had its economic impact. What we don't want it to do is to have a civilian use. That puts the government in the market in competition with its own people, and acts as a drag on the economy.

(For example, the government could just buy John Deere tractors, that would spur the economy where they are made just the same as if they were buying M1A tanks, but buying tractors would bid up the market price of tractors for farmers and construction companies, ie supply and demand, so it would have a net negative effect on the overall economy. For maximum stimulus effect without undesired side effects, we want the government to buy things that have no civilian use so that they aren't competitors in the marketplace with civilians for those goods.)

That's also why the government destroyed its old ICBM launchers instead of selling them as cut rate satellite launchers. If they had done that, they'd have depressed the market for new launchers and hurt the economies of the areas where they are produced.

Hello , I have a VX-5 forsales. NEW CONDITION It's about 3 months old
a 9Dxxxxxx series ,and I have never had a problem with it.
It didn't do any hardware mods, I just use the Sofeware EVE to mods it. I'm
not use 6 meters at all since there has no 6M repeater.
and the main reason I selling it is I need the money for my school . It's
comes with radio,antenna, box ,manual , case(CSC-73), Rapid desk
charger(CD-15), Mic adapter(CT-44)and
the RS clip on belt clip. I don't want to give it up but
I need to pay by school for next year. I'm asking $349 + shipping.Thanks
you!! Victor iden1000@hotmail.com

I would like to invite you to http://hfradio.org - my hobby website, where I am gathering radio resources together for the general public. My Amateur / SWL site includes map generation (for instance, create an equidistant azimuth map projection centered on your location), propagational forcasts and up-to-the-minute event information, swap and shop, and more.

Your comments and suggestions go a long way to help me make the site useful. It is my hobby... but I am working hard to make the site worth your repeated visit. So come on by. http://hfradio.org.

(We just did field day as NW7US -- we had a LOT of fun up on a mountain at 3250 feet. Did all HF voice this particular time. And we're still camping out until after the 4th of July. Now, we're a mini-dxpedition! Hear us on the HF bands. We'll be working some 40 meters, but mostly, we'll be on 20, 15, 10 and 6. Hope to hear you!!)

73 de NW7US, Tomas.

as far as I know, wealth is not created or
destroyed, just redistributed. This doesn't feel right, so please
explain.
>
> Question: from whom was Bill Gates' wealth redistributed?
>
> Wealth is most certainly created... ever hear the term "economic growth"?
>

Wealth is most certainly created, and is the driver of economic growth. One learns this in Economics 101. But wealth is generally not created, only redistributed, by the Government. What you learn in Economics 101 is that the accumulation of wealth is not a "zero sum game", as was (is?) believed by folks of the Socialist and Communist persuasion. Someone getting rich is not necessarily rich because he has taken it from someone else. He may have created the wealth, as has Billy Gates.

Gates has already created as much or more wealth than many of the previous tycoons, such as Vanderbilt, Carnegie, Rockefeller, etc. And, this wealth is far more widely dispributed: Microsoft has created over 1000 millionaires. None of this came from taxes, or as redistributions from Government, but instead it was created in spite of Government redistribution policies.

It amazes me that this elementary economic concept is not understood by even many 'educated' people today.

73,
Don, W6JL

Not being a student of economics, I cannot offer a logical argument, but to me it would appear to me that the wealth that Bill Gates has accumulated and redistributed was not actually created.

His money came from selling products that *he* was responsible for, as opposed to other products, such as food, clothing, cars, televisions etc.

A person has an amount of 'disposable' income and many see fit to spend it in a way that benefits Mr Gates.

Barry

> redistributed was not actually created.

Ok, the stated premise is that the wealth was redistributed. Bill Gates now has assets of somewhere around $100,000,000,000 - who is now doing without that hundred billion?

> His money came from selling products that *he* was responsible for, as opposed
> to other products, such as food, clothing, cars, televisions etc.

Actually, most of his money didn't come =from= anywhere. In fact, most of his wealth isn't money at all, but calculated by his stock holdings.

Consider Marc Andersson (or whichever variant of the name he uses) of Netscape fame:
He goes to bed the night before Netscape's IPO and really doesn't have a lot of money. The next day, trading opens, and his holdings are suddenly worth tens of millions - nobody gave him any money, but his wealth was suddenly created.

The other thing to consider is that every minute of every day our various mints and the treasury are creating more money - wealth created. (Which creates inflation, btw...)

But we digress. This topic should be moved to one of the economic discussion groups.

Hmm, you must have read this on alt.alcohol. Wonder why he posted it there... The only relevance I can see to alcohol is that a successful project is often celebrated afterwards with a few drinks. :-)

This is the part that troubles me. I've always suspected that my future
retirement hinges on everyone buying in (yuck yuck) on this shared
fantasy of wealth. So, is it real, or just a figment?

Certainly there's real value in Microsoft's intellectual property, and
in the ore mined from the hills. Where and how are these accounted for
in whatever counts these things? Is more currency printed to reflect the
value of the software I write, or the book I authored? Or does that wait
until the mining company uses it in connection with digging up some more
dirt?

Michael.

Joel:
Check out the FCC database at the web site for the University of Little
Rock at Arkansas. It is at: http://www.ualr.edu/~hamradio/callsign.html
Just enter just a zip code for the part of New Jersey you're interested
in. That should give you plenty of hams to contact.

73,
Tom, KC1J
ARRL Field & Educational Services

Currency is just one counter used as an exchange medium for trading wealth.
The "money supply" at any given time is the sum of the current deposits in banks
(just numbers in a computer), available lines of credit (again just numbers in a
computer), other liquid assets (ie readily convertible T-bills etc), and currency.
The latter is the smallest, representing less than 10% of the current money
supply at any given moment.

Money, at least US paper currency, is just a form of promissory note. Its real value is less than 1 cent per bill. But as a counter, it serves in place of barter to let us trade among ourselves items of value, as do checks, credit cards, etc. The items of value are the goods and services which we wish to obtain or have performed, or which we produce or are willing to perform.

Is wealth real? Well yes, it is as real as anything can be in human terms. It is as real as love, hate, want, envy, and desire. But every price is flexible. The free market sets what we agree to be the value of a good or service at any given moment. Nothing has an absolute value for all time. Goods and services don't, and the counter we use in their stead (money) doesn't either.

Fashions in what is desirable change, circumstances change, the value we assign to things goes up and down. When I'm hungry, a hamburger has more value than when I'm sated. I may value an hour of my time more or less than you do today. Etc. The market averages these things out, but even the average value doesn't stay the same over time. 40 years ago, hoola hoops, coonskin caps, and tailfins had a lot of value. Today they are a drag on the market.

Some things retain a constant value better than others, of course. But even gold and silver swing wildly in value. For many years, I had Coffman's rule of meat. That said that a US made car cost the same, pound for pound, as hamburger. It did from the 1920s through the 1960s, but then government interference in the market drove the price of autos up (CAFE, emissions standards, 5 MPH bumpers, airbags, ie things the average consumer wouldn't choose in a free market), so now autos cost the same as filet mignon, pound for pound. Does that represent a real increase in wealth? I don't think so. Only the free unfettered and uncoerced market can determine true wealth.

You folks are talking about the interesting article from ARRL, I gather.

From the article:

WASHINGTON, DC, Jun 17, 1999--The FCC's Riley Hollingsworth, K4ZDH, says the Commission may have to resort to fines to curb the practice of hoarding multiple club station call signs. "The reason we're concerned about this is that we consider it an abuse of our licensing processes," said Hollingsworth, a legal adviser for enforcement in the FCC's Compliance and Information Bureau. "If somebody applies for 30 or 40 licenses over time, it really overloads the staff." Hollingsworth pointed out that the call signs often must be typed in manually.

Earlier this month, a ham listed as the trustee for more than three dozen club station call signs agreed to give up all but one of them.

<clip>

Hollingsworth concedes that the FCC rules do not specify an upper limit to the number of call signs an individual may hold, but says "the underpinning of the rules is common sense." He recommended that multiple call sign holders should seriously consider turning in their excess grants before they hear from the FCC, "because we will be pursuing them."

<clip>

The FCC says the two-year rule applies for those seeking to obtain one of the desirable call signs being yielded or called back by the FCC, and Hollingsworth plans to specify a date of cancellation on each letter to a holder so that it will be clear when the two years are up.

"We're also going let them know they can't reclaim any of these call signs under former call sign holder exceptions to the two-year period," he said. Close relatives also would be unable to claim any of the call signs in the future.

<end>

I do see collecting callsigns from other countries, if indeed you operate them from time-to-time. I, for instance, do plan on doing a dx-pedition sometime in the next five years... I certainly would feel that I earned those calls I hope to obtain. Having those next to my name will be a badge of pride... working from some remote location... (ah, the dream of an adventurer!).

Anyhow, I found this topic to be rather interesting. I'd love to hear a comment or two from some of these "warehousers."

Dr OM/YL

This mail to inform You that I resently have uploaded an updated
beacon list at my website covering a 50 MHz world wide in six
continantal splitted listings covering, Africa,Asia, Europe,
North America, Ocean/Pacific and South America.
An worldwide 70 MHz list and European 144 MHz and 432 MHz lists
are added too.

These lists can either be viewed in html or downloaded as a ZIP
file in band pacages, the ZIPed version contains a bandplan aswell.
As something new its now posible to view the files in plain text,
as too.

These can be found at http://www.qsl.net/oz6om/

I hope You find the listings of use ...

Hi there. I'm an electronic musician seriously searching for the
following old electronic musical instruments from 1960-1990,
any condition, broken OK:

Synthesizers
Keyboards
Drum Machines
Sound Modules
Effects Processors

Analog Sequencers
Analog Modular or Patchable Synths

Roland TB-303 Computer-Controlled Bassline
Roland MC-202 Microcomposer
Roland TR-909 Rhythm Composer
Roland TR-808 Rhythm Composer
PPG Wave 2.3
Yamaha TG77 Tone Generator
Casio VZ-10m Professional Digital Synthesizer

Moog, ARP, Korg, Roland, EML, EMS, Buchla, Serge, Yamaha, Aries,
Sequential Circuits, Oberheim, Steiner-Parker, Polyfusion, Emu,
Wavemakers, Synton, anything similar!

In general, I'm looking for old stuff with knobs, sliders or especially built in patchbays. The older or more unsual, the better!

For a better idea of what I'm into, please see:

http://members.aol.com/rolandman1/index2.html

If youve got anything or know someone who might, please email me privately at rolandman1@aol.com and be sure to include price and condition.   Thanks in advance and apologies if this message bothers anyone.

Steiner-Parker Modular
Steiner Synthacon
ARP Sequencer
Tonus ARP model 2600 Synthesizer

That's true. NUDETS (Washington-speak for Nuclear Detonations) inside
the atmosphere mainly produce the kinds of ionospheric effects I mentioned.
(From a radio communication point of view, that is.) They alter the
ionosphere in much the same way that a Solar flare does, though more locally.

But it can still play havoc with normal skip propagation for awhile.

OTOH "exoatmospheric" bursts (ones outside the atmosphere) are the ones that produce primarily the EMP effect (unless, of course, an important satellite happens to be nearby). What happens here is very interesting. The so-called "prompt radiation" from the burst arrives at the upper layers of the atmosphere at essentially the speed of light. As it encounters substantial density of air, it knocks loose electrons in what as I recall is called the Compton Effect, the electrons sometimes being called Compton electrons. Being in a magnetic field, they don't follow straight lines away from the point of impact but rather fly around and around in a helical path, as a result of the odd fact that the force on a moving charge due to a magnetic field is always at right angles both to the velocity and to the magnetic field lines. This high-speed motion in a helix of course generates radio waves, which travel at the speed of light. But what makes the EMP so nasty is that the incoming Compton electrons are also ARRIVING at the speed of light. So the point at which the waves start getting generated moves downward at the same speed as the waves are propagating. The practical effect is that the energy buildup in the wave continues to be RIGHT AT THE WAVEFRONT! Which means that the wave takes the form of a very sharp pulse wavefront that has a bandwidth of perhaps hundreds of megahertz, and LOTS and LOTS of energy in it.

It is this very sharp pulse wavefront that causes all the trouble. First of all, it can generate many kiloamperes of RF current in a conductor, for a brief moment, and kilovolts or even megavolts of peak voltage, depending on the circuit impedance of course.

Also, the fact that the bandwidth goes out to the VHF/UHF region means that equipment designed for lower frequencies may not have adequate "bypassing" to deal with the sharp peak. Even HF (3 -30 MHz) radios need to have bypass capacitors with very short leads, as if they were VHF / UHF radios, in order to tame the kind of pulses in an EMP. Not to mention unusually good shielding, parasitic chokes on leads entering the shielding, and a lot of techniques that just aren't normally used in equipment not specifically designed to be EMP-resistant.

For hams, keeping a spare radio in the trunk of your car, or in an underground shelter, or in a metal storage cabinet, might be one of the better ways to have equipment survive.

According to the FEMA consultant whose lecture on EMP I heard some years ago, the peak of the EMP spectrum is estimated to fall at AM Broadcast type frequencies, despite the very sharp risetime. I think this relates to the dynamics of the electrons' helical motion in the Earth's magnetic field that I mentioned earlier. But anyway, any piece of conductor that resonates in the low MHz region, say 0.5 to 3 or so MHz, will pick up the biggest spikes. Short conductors, like the one on your 2-meter HT, may only see a few hundred volts peak. However, even that much could well wipe out the front end of your radio.

>But technology has changed a lot since the 60's. Back then, tube
>technology (which was pretty much 'voltage' amps and high

>most devices bite the big one? Probably, but they would also be a lot
>of survivabilty that you wouldn't expect.

Most analyses I saw seemed to conclude that tube equipment was MORE likely to survive, simply because tubes are inherently less prone to failure from high-voltage pulses than solid state devices are.

Failures of solid-state devices would probably be quite widespread, but erratic. Indeed some radios would get lucky and survive, perhaps just because the standing wave pattern didn't hit them with as high a signal level as some other radio received, maybe even in the same room.

My impression is that the phone company would come out fairly well because they have historically put so much emphasis on protection against lightning. However, the lead lengths they use from the line to the varistor devices they use for protection would probably be so inductive at VHF / UHF that sizeable spikes would remain. Old-fashioned phones should be fine, but solid-state phones and modems might well get zapped. There would doubtless probably be quite a few "ESS" failures (telco switch computers).

Today the power grid is probably LESS sensitive to a massive overload. The technology for handling 'events' such as lightning strikes is much improved. In that regard alone it might be a neat idea to just contact a power company and ask them how they have changed since the 60's.

Indeed, that would make a fascinating topic for a radio club meeting. I bet they'd be surprised, though, that you were asking about EMP rather than Y2K !!!

Incidentally, you might be surprised to find that FEMA themselves would be happy to send someone out to talk to a ham radio club on both of these subjects, particularly one located in a large metropolitan area that would publicize the talk widely.

>I was told a ground busrt doesn't yield near the EMP of an air burst.
>But that's not to say it still won't knock out tons of equipment. Mike

The "exoatmospheric" burst generates the EMP as its main effect. The less atmosphere between you and the burst, the less of an EMP effect it would generate because the pileup of the wavefront described above would have less time to develop. However, rumor has it that there are now also weapons designed to produce EMP-like effects at ground level, without using nukes.

If so, I think that's a step forward, sort of the opposite of the neutron bomb, which kills all the people without hurting the equipment! Wouldn't it be nice if the human race could learn how to do warfare in the future by killing all the computers and weapons systems without harming the people!

Or even better, if we could somehow learn to do WITHOUT warfare at all!

To put it into perspective, how close should a lightning hit in order to produce a similar EMP as an ionospheric nuclear blast ?

In the days when the NEMP was a hot topic of discussion, you could easily get the feeling that nothing would survive, but from the

equipment that I have seen that have been designed to be NEMP
resistant, the protection is not that exotic.

Tim, Maybe you've forgotten what you said, I'll refresh your memory from
the
.wav file that is posted on web pages about your criminal activity on
3.950.

KK7HO started this discussion about how much it would cost to have
W1WCR and another amateur radio operator killed. W1WCR has different
political views than KK7HO, and this is presumably Volz's motive for his
plan
and discussion of the murders.

KK7HO states: What he don't know is that now-a-days, five hundred
dollars
will get his head blown off.

K5BLB responds: For five hundred dollars you can have him and Vic both
done away.

So this transcript makes it clear that KK7HO aka Tim Volz was shopping
(on
air) for a price to get fellow amateur radio operators killed.

If anyone doubts the accruacy of the above statements, I'm sure that it

can be
reposted (500dollars.wav), to this newsgroup or any other.

I just hope that the FCC acts before Tim is able to make good on his
threats.

Hiya,

does anyone know of a windows based version of the xmit id software that can be used for taking transmission footprints that can then be used to match against jamming or squeaking tarnsmissions.

I have just downloaded the latest version of xmit (v261.304) but it still has to run in dos and this is causing me major problems as i need one that will work in windows using the windows soundcard settings and configuration and although i have tried I cannot get xmit to do this.

Many Thanks in Advance

Tim,

Okay, I've seen your denial about this before, and I'm willing to accept it as fact, but if you are innocent, please describe what you ment when you said:

"What he don't know is that now-a-days, five hundred dollars will get his head blown off."

I'm sure that there is a good explanation for your statement.

Thanks in advance.
KOD.

About 8 miles. The inverse square law is still our friend, even with NEMP.

It isn't. It just has to be done *right*. Same with lightning protection.

This isn't quite correct. When the nuclear device detonates, it generates large amounts of prompt gamma radiation. Gamma is electromagnetic radiation of an extremely high frequency (higher than X-rays), so it travels at the speed of light the same as any other EM. If the detonation occurs in atmosphere, the gammas are rapidly absorbed over a short distance by the atmosphere, generating an incredible heat pulse. The rapid expansion of this superheated air is the primary blast effect of a nuclear device. Relatively little NEMP is produced.

But when the device is detonated at high altitude, there is little sensible atmosphere to absorb the gammas. Instead they encounter the free electrons in the ionosphere. These are accelerated by the gammas, just as they are accelerated by any radio wave encountering the ionosphere (or as the free electrons in your antenna are accelerated by a passing radio wave). But since the gammas are so energetic, and are available in copious amounts, the acceleration produced is *much* stronger, and the reradiated energy as the free electrons decelerate is also much greater.

The free electrons do *not* travel down to the surface, nor do they travel at the speed of light (though they book right along after the initial acceleration). As they approach the sensible atmosphere, they encounter sufficient air density to be stopped while still many miles above the surface.

Because of inverse square spreading, the gamma wave front will impinge on a large segment of the ionosphere, so the effect is spread over a large area. The reradiation as the free electrons are decelerated is also over a wide area, but bunched vertically in the upper stratosphere as air density becomes greater. This produces a sharp wavefront extended in area. We can treat this the same way as we would a uniform current in an infinitely long wire, so this reradiated field falls off only with the inverse of distance rather than as the inverse square of distance as would be the case if it were a point source. That's what makes NEMP potentially dangerous to our equipment on the ground.

A 20 MT device exploded at an altitude of 100 miles will produce a field strength on the ground roughly equal to that produced by a lightning bolt 8 miles away. But because the NEMP effect occurs over an extended area, the effect is as if there were a lightning bolt 8 miles away in every direction at the same time. The induction will strongly energize extended conductors along their entire length. That's why NEMP is such a threat to the power grid and the phone system.

For the comparatively short conductors we use for antennas and other wiring in our stations, the effect isn't much different from a lightning near miss except that the wave front is steeper, ie the risetime of the induced pulse is faster. So we have to use suppression devices which clamp the pulse much quicker than what we'd need for induced lightning surge.

Fortunately, there are gas tubes available which fire in under 2 nS, and
that's adequate.

>Those who plan for war are sure to get it.

The appropriate aphorism goes like this,

"Those who beat their swords into plowshares
will wind up plowing for those who do not."

Those who do not plan for war will certainly be attacked
by those who do. Appeasers like your Chamberlain learned
that to their sorrow.

The only defense against war is to be ready to make it so
costly to your potential opponents that they don't dare attack.
The Swiss have understood this for 700 years. The rational
among us in the rest of the world have come to realize it in
the last 50 years.

Readiness to carry the fight to any potential aggressor has
kept the peace in the latter half of this century while lack of
preparation for war caused two major world wars in the former
half of the century. 50 million dead was a high cost to pay to
learn this lesson. People like you would have us repeat it
again and again.

The price of freedom is eternal vigilance. Those who would
have us disarm are fools, or worse. When the lamb lies down
with the lion, the lion gets up with a full belly.

It's never a bad idea to go with the 5 watt radios. I have an Icom W32A,and it's fairly small, and does 5 watts. I know there are some really, really tiny radios that are out now; I wouldn't go with them because of the limited output. When I was looking for a radio about a year or a year and a half ago, I found that Icom generally had handhelds cheapest. Yaesu was second, but so far, I've been impressed by yaesu's stuff more. The FT-51R is a good choice, but it's kind of expensive (last time I checked). It's probably within your price range, though. It seemed like Kenwood stuff was a little more expensive, but this could have all changed by now. There are a few new radios out now, too.

OK, as far as software, most of the software for the radios requires Windows (dangit! Linux rules!). You don't need the TNC to program the radio via computer, but you do need the cable and the software.
As far as the packet radio thing, you just need: 1. A computer. 2. A power supply for the TNC. 3. A TNC. 4. A radio w/ antenna.

I haven't run into any TNC's that require cards, but I don't doubt that they're out there. The TNC that I'm borrowing from a local radio club (I'm a high school student too...) is stand alone.

I don't know. I know very little about this radio. I would go with the seperate TNC, personally, but go whatever route you want to.

I read somewhere that it's illegal to surf the net through ham radio. You can check your email, though (I think). The president of our local college club (the University of Missouri Rolla) once endeavored to connect his HP48 calculator to his TNC and radio, and have about the same setup on the other side, so that he could check his email from anywhere on campus. He never finished the project, though.

> Then later(when i have made some money), after i have bought
> the HandHeld
> and equipment to link it with the PC, I would like to buy a
> transciever that
> can do HF. Any good ones you know of that would not blow a
> hole in my
> budget?

The Icom 706 (whatever the latest is; the "G" or whatever) and the Yaesu FT-100 are about $1300 or so, but they do everything. I don't think I'd get one because I heard the receiver would not be very sensitive. There are other transceivers out there that do ONLY HF; is that what you want? There are many options for HF equiptment. If you want something older and used, like an Icom 735, for example (kind of a "boring" radio, though) would be a lot cheaper. I see that kind of stuff every once in a while on ebay.com.

Hope this helps. I'm certainly no expert, but if anyone catches an mistake, _please_ correct me!

73,

Well it comes a no surprise what so ever that 2 of the biggest loudmouthed
squeakers and jammers have made comment to my post.

Perhaps they have something to hide such as the fatc that they are both
supporters of squeakies and jammers which spoil the hobby.

Anyway i will NOT be drawn to your gutter level by getting into yet another
N.G. row which is all you both seem to be capable of.

I am sorry, but THIS subject I simply can't ignore.....

There is something about all this EXPENSIVE nonsense about "STAR WARS" and similar methods of Anti-Ballistic Missile defenses that grates on me.

WHY are we spending who know how many BILLIONS of dollars on this ???

There are so many ways the money can be used for helping people......

OK, here is my reasoning:

1.0 The MISSILE'S function is to deliver the bomb to it's destination and detonate it when the aggressor nation want's to kill somebody.

2.0 The purpose of these defense systems is to stop the missiles BEFORE they can get to their destinations and detonate their warheads.

OK, fine.

BUT, if I were in charge of being the aggressor, I'd spend a tiny fraction of the cost of the Ballistic Missile and smuggle the bombs to it's destination some years prior to the war.

This way, I wouldn't have to develop expensive and delicate missile systems, just use the same methods drug smugglers have used for many years.

All that fancy "STAR WARS" garbage means absolutely nothing, since the bombs are already at their destinations.

SO, why are we wasting our money trying to develop a useless system ?

I suspect it's due, in part, to the reluctance of the politicians in charge of military projects to admit to the public that there IS no defense against this tactic.   Well, that, and a tenancy to want to keep money flowing into programs that help keep them employed.

Things would be simpler if all the major nations admit that they have done this smuggling in of weaponry and that there is no practical defense against it other than the knowledge that the entire world would go up in smoke if ANY of them started a major offense.

Yep, "MUTUALLY ASSURED DESTRUCTION"

If they all admit to this obvious tactic, then we can stop wasting money on useless "defensive" programs and use the money for something constructive.

Like, for example, helping the large starving parts of the world...

Yeah, true, it WOULD require politicians and military types to admit to reality....   That seems to be a problem with some people.

WOW! Someone else noticed the crap band on 3.950. But there is another on 3.853 and in my opinion, both stations and ALL that participate in the cursing, killing, and all other "extremely-not-ham-related" conversation should have their licenses revoked. The people who do this stuff are a disgrace to the amateur radio community, and not only embarrass myself of being a ham, but several and most of my friends who happen to also be hams.

Simple. Whether the "Star Wars" defense system was
ever technically achievable or not did one thing.  It
bankrupted the former USSR.

It isn't. It just has to be done *right*. Same with lightning protection.

KK7HO spun:

> Listen to the rest of the conversation (tape), and the others who are in it and
> it''ll all be clear. Other than that I don't really give a damn what someone
> like you believes or thinks.

That's the problem Tim, I have heard the whole tape, and it's clear that you were discussing the cost to have W1WCR killed. Thats when you said:

"What he don't know is that now-a-days, five hundred dollars will get his head blown off."

Your statement shows that you are the only true 'hater' on the
frequency, Tim Volz.

>
> >Tim,
> >
> >Okay, I've seen your denial about this before, and I'm willing to accept

> gang when someone speaks out about THEIR statements. You know, the racist
> separatist remarks they make. The condoning of bombing abortion clinics and
> doctors. The KKK, the National Alliance, the Western Imperative Netwerk, Ernst
> Zundel.

What are you ranting about Tim? You're really off in some fantasy here. These
things are not part of the discussions on 3950. They are only voices you must
be hearing in your head. Do you think it's time you got some professional help?

> Instead of questioning their motives you want to ask me about a statement that
> you and the NITS have taken a little sound byte of and twisted it in an attempt
> to implicate me in some "conspiracy".

Well it was you and Sid that were talking about having other amateur radio
operators killed. If you want to call that a conspiracy, that's your call. You
just sound like two phychos to me.

> Of course we all know that the "So
> Called" net THRIVES on "conspiracies" . I suggest you listen to the whole tape
> Then shut up about it.

Well If I'd been recorded in the act of a felony, and the recording was made
available to 1000's of others, I'd want everyone to shut up about it too.

If knocking out the local repeater spoils your AR hobby, you ought to
get out more. :-)

Just think you could build a simple DF aerial and do a bit of
self-teaching. build up a pattern and track them down. Doing that
rather than gassing up the road would be much more in the AR mould, so
perhaps the jammers and squeakers are providing a sterling service...

</tongue slightly in cheeck>

Cheers,

Jon.

Tim,

You were caught -again- threatening other amateur radio operators. It's nothing new, from a jammer such as yourself. You will no-doubt deny that you -ARE- a jammer. But before you launch into your tirade about Nazi's and the like, please point your browser at:

http://members.xoom.com/kevin_strom/

And listen to the first two selections. Your recordings there prove that you harass other hams on 3.950. In this jamming session you just started harassing a non-political conversation on 3.950 about packet radio baud rates. This clip runs over 6 minutes, and contains the whole conversation.

KK7HO wrote:

You sure were. That's why you were talking about the price for a contract killing on the frequency occupied by your intended victims. Why are you so full of hate?

> You only put up one little sound byte because the whole conversation would
> blow your LIES up in your face.

This clip runs over 6 minutes, and contains the whole conversation, and illustrates your true character. That of a true amateur radio outlaw.

So give it a listen, and then it's clear who the lyer is: Tim Volz KK7HO

Who is the "them" to which you refer?

Jamming and Squeaking is heard so rarely these days that it wouldn't be worth the time and effort building de-effing kit for the purpose of tracking "them" down. They are simply not around anymore. The LPWS is only hype and hotair. The real ARG faded out in the mid 1980s - now they really knew how to squeak and jam!

Unless someone knows different . . . .

Chris

Howdy!

Just a friendly invitation to http://hfradio.org - where you will find propagational resources, forcasts (K7VVV's forcast for Field Day, just in!), and more. Create special fieldday maps!

Hope your weekend is successful!

EMP will generate a very broad area of coverage. A high altitude explosion will produce 50,000 volts per meter over a 1000 mile radius.

The energy spectral range is different between lightning and EMP. Lightning does not have the fast rise time of EMP and therefore lightning EM energy peaks in the range of LF to MF . EMP, as mentioned earlier, has measurable components out to 800 MHz, but peaks in the MF to HF range depending on weapon design and altitude of burst.

Ground burst EMP exhibits a different characteristic. The nuclear x-rays are absorbed within about 10 feet of the blast center and they produce tremendous heat and EMP. The electrons, due to the earths magnetic field, rotate and curl into the earth as opposed to transiting in a longer space path. They produce a radial field. The nuclear prompt gamma rays, much higher energy photons, require about 1 mile of atmosphere, at sea level, to complete their absorption in the atmosphere. It takes a longer time for photons to travel a mile, so you get a broad pulse width.

All together, nuclear EMP produces about 50,000 volts every ~40 inches with energy peak spectral density in the 1-10 mhZ range. Lightning produces about 20,000 volts every ~40 inches with a peak spectral density in the 0.1 to 3 mhZ range.

Both are very nasty. We have all read about lightning damage to antennas and equipment in these groups. It will happen if ever there is a Nuclear induced EMP event.

==============================
Could this be clarified please ?

Is the field strength 50 KV per meter at a distance of
1000 miles from the explosion?

If not, where *does* the 50 KV per meter occur ?

Reg.

Looks like a decent explanation. However I have one question. Shouldn't the
signal generated fall off at something between 1/d (close to source) or
1/d^2 (further away)?

I have a WinRadio1000i gathering dust that I am looking to trade for any
HF radio set or desktop/handheld scanner!

Interested? Drop me an email! The set is sat in its original box
gathering dust now!
Dean

Patrick
If he's old at 35 what does that make me at 43?
BTW you'll have to speak up the hearing aids in the shop again! ;)

X-Http-User-Agent: Mozilla/4.0 (compatible; MSIE 5.0; Windows NT; DigExt)

To all tone decoding enthusiasts!

WintonePRO Beta 2 is now being made available to select testers!
We are interested in folks who want to put the software through
the wringer, and tell us what you think!

WintonePRO features :

* Software Decoding with your Sound Card, No other Hardware required
* DTMF, CTCSS QuickCall I&II capable
* User definable single and double tone sets - Define your own!
* Record sound squelched Compressed Audio, in as little as 6MB/Hr
* Suite of visual audio spectrum analyzing tools
* Fully Windows 95,98,NT compatible
* Plug-In Support for RedShift CE-232 Scanner Control Software

Requirements :

* You must have a Pentium or Faster CPU
* Windows compatible sound card
* HAM Radio, Scanner, or another audio input source
* Usage experience with Wintone 2.0 Helpful, but not required

If you are interested, please email us at wintonebeta@steaksandwich.com.
You will recieve a confirmation email giving you a URL.

Please note, that due to an unfortunate ISP incident, our previous
tester database was deleted. If you had contacted us before, please
email us again, so we can get you put back in the list!

>>Anyone know the extra feature (not show in user manual, like U/U, V/V,
>>cross-band repeat, DTMF remote control, mods .........etc) for IC-2800H?
>>
>>
>>
>>Best Regards,
>>Bo

Yes the 2800H will do a cross band repeater operation,  the same
remote control operation as the previous dual band radios but it does
not have V/V or U/U capability.

Dr OM/YL

This mail to inform You that the latest edition
of the OZ50MHz DX Bulletin #99-022 is now uploaded
at my homepage, at the adress;
```

http://www.qsl.net/oz6om/

Due to the editors participation in the Region 1.
50 Mhz Contest (properly as OZ7M), have the bulletin
been released one day erlier than usual.

Please have in mind that the OZ50MHz DX Bulletin
normaly is uploaded late Saturday evening (UT time)

vy 73 de OZ6OM "Matt"

Well, maybe not, considering where that expression comes from!

So said, in the world of theatre, when you tell some one "Break a leg",
you are wishing that their performance should go so well, they should
have to take a bow!

You should use a helmet when you skateboard, that way you won't get the kind of brain damage your displaying here when you wreck!

Signed one of those ol' fart hams

It is not a filter or a holding pen, morse code is just what is says it is "The Code invented by S. Morse" as in Morse's Code! If Groucho Marx had invented it we would be argue about Marx Code!

And is it a filter? "NO" because stupid jerks and MENSA members can both learn code and pass the test!

What we need instead of Morse Code testing is an intelligence test, in other words Are you smart enough to use a Radio on the Ham bands using a little commen sense? If not no license! Come to think of it that wouldn't be such a

```
bad idea for New Reader Programs either! Mmmm.........

Many of us were been using the Internet for years before MS-Windows could even begin to talk to the Internet using UNIX. Telnet, ftp, NFS, gopher, Archie and hundreds of Internet apps were online long before MS-Windows even knew what TCP/IP was! Remember that Mosaic (Netscape) was first written as an X-Window app!

I have had my Canadian Basic (same as Tech) license since November 1998, and offer the following suggestions since I have just gone through what you are talking about.

Only buy a handheld if you plan to take it camping, and then only if you are sure that you can hit a repeater while in the mountains. Very few people monitor the simplex VHF frequencies and you'll never get a contact that way. Otherwise, save your money and get a good dual band mobile with 50 watts output (for about the same price). You can still run it in the house with a power supply or in a vehicle on 12 V. The fun of having a handheld around town lasts for about 1 month, then you wonder why you ever got one. Mine sits for days without being used. The mobiles have much better reception too, which is important if you are planning on working satellites. If you have a computer with a soundcard, you don't need a TNC now, since there are lots of programs, including TNC emulators, that will allow you to receive and transmit digitally via your radio. Just do a search on the web for packet radio and soundcards. A 2 m rig is good to keep in touch with other hams in your area, but most of your fun will be on HF. Don't worry too much about number of memories etc., since you'll likely only use one or two repeaters in your area anyways.

What I am doing now is studying to upgrade to a General class license, which involves 12 wpm morse code here in Canada. I think it is worth it since, having been bitten by the bug as well, I want to be able to use the other bands. You will soon tire of just being able to talk around town or on the road.

So persevere, go for the General class, and get a full featured HF rig, 'cause that is what you'll end up buying eventually anyways.

Good luck!

Bill VE7WYC

Contest period is Jun 12-13(2PM east Sat through 11PM east Sun)

The Murgas ARC will be operating limited multi(6m, 2m, 220, 440) during the ARRL June VHF contest using the callsign K3YTL. We will be running all 4 bands on FM, SSB, and CW from our FN11uh location(northeast PA.) The exchange is a simple call and grid square(see http://www.arrl.org/locate/gridinfo.html to find your square if uncertain.)

2 meter FM will start at 5PM Sat on 146.49 MHz and146.55. Both freqs will be operated on at the top of every hour. Dial around since we might be forced to move if band is crowded. We hear lots of people even though you may not. All other FM should be continuous. CALL US ON 52.525, 223.5 AND 446!

SSB/CW activity should be audible all of the time. Just work us. Answer our CQ's.

All of our stations will be connected, so when you work us on one band simply ask for a schedule on a different band and you can score another contact immediately. Simple!

We thank everyone who participates in this wonderful event. Good luck and happy hunting. CQ contest!

There are only a few C.B. operators out there that spoilt it for the
rest of us.  Well all would not want to be like the Hams, talking about
their antennas all the time

Well now.  Did you know that there are two different types of Morse
Codes:
American and International.  how they differ; I don't know.

the military still teaches it. The reason that they still want to teach it is that
in a nuclear wasteland, it is theorized that CW will be the only method that will
work. If you don't hear the dih you will hear the static "beat" silent. I hope
this make sense. 73's brother

Do you know any studies that point to radiation hindering radio communications?

Very good points:

"Jeff Bishop, n8wb" wrote:

> Then make the written more technical. Get into circuit design. Don't just tell us what a diode does. Have the test reflect why it is in the circuit.

...

> If people think that cw is a way to keep out the yahoo's, go down to 80 meters and listen around. It didn't work. I doubt that anything that the FCC would do to change the testing will keep poor operators off of the air. But if we are going to drop the cw requirement, we need to add something to the written portion of the test to take it's place. Perhaps even a higher percent pass requirement? 95%? Just a thought.

Part of the entry-fee for me, when I joined (and that was not too long ago) the ranks of the Ham community, was that several Hams had to hear me send, as well as test my ability to copy, for the sole reason that I had to demonstrate the technical ability to operate on the air. At that time, morse was used as a way to gauge that. The written was the other part of that assessment.

I agree with you that we should have some better technical depth, but also, I think, we should explore the idea of adding something that would encourage / guide new-to-the-hobby folks to better operating skills. If you remember, the typical cw exchange actually demonstrated proper sending etiquette. So if we eliminate such subtle promotion of good operation, then let's put something in the written that tests / illustrates good operating principles.

Thoughts?

Tomas

You're trolling, right? You're really one of the know-code crowd in
disguise, trying to discredit the movement to dummify.

Michael.

In article <375E1D66.7426B2C7@greatergood.com>, Tomas <tomas@greatergood.com> writes

>Very good points:

[snip]

>Part of the entry-fee for me, when I joined (and that was not too long ago) the ranks of the Ham community, was that several Hams had to hear me send, as well as test my ability to copy, for the sole reason that I had to demonstrate the technical ability to operate on the air. At that time, morse was used as a way to gauge that. The written was the other part of that assessment.
>
>I agree with you that we should have some better technical depth, but also, I think, we should explore the idea of adding something that would encourage / guide new-to-the-hobby folks to better operating skills. If you remember, the typical cw exchange actually demonstrated proper sending etiquette. So if we eliminate such subtle promotion of good operation, then let's put something in the written that tests / illustrates good operating principles.

Interesting comment - that in the US the Morse test is seen as a means of showing technical ability.

Over here in the UK the reason for the Morse test as a means of going from a Class B (50MHz and above) to Class A (HF/all bands) licence was that some HF bands were/are shared with marine, and also that a 'Ham' (we prefer to use the term 'Amateur') could be listening on any band, and in either instance could hear a Morse distress call. He/she should be able to read that message and pass it on to the relevant authorities - although Heaven knows who would take any notice or be able to handle it!

With the ITU scrapping the Morse requirement in a few years time we are heavily engaged in a debate over the alternative means of permitting access to the HF bands - some say the need to hold a Class B for some years plus be supervised in operation over a period by a Class A licencee should be enough, others (and the current trend) advocate a Morse test at 5wpm send and receive. You can imagine the anger that this latter suggestion is causing in the established Class A fraternity who had to send and receive (and much more tightly than in the US) at 12wpm!!

I like the Japanese idea: retain the Morse test but at zero wpm!

Hello group,

Please check the latest version of The TubeBug.

Now you'll find the complete manual of the National HRO 50 receiver online
for you to download in the boatanchor section of The TubeBug.
Within the next few weeks you'll also find the manuals of the Sommerkamp
FRdx
500, FTdx 500 , Siemens E 309b and several other online for you to download.

http://Come.to/TheTubeBug
http://www.knoware.nl/users/ecremers

Come and have fun,

Erwin Cremers

anyone see the adam-12 episode where malloy got shot? his radio mic
was smashed and the only way he could communicate was to 'key' the
radio on and off. he sent a bit of morse code, was cool.

morse code is pretty cool, you don't need a radio to use it.
a mirror and sunlight works too.

anyway, i thought i might throw this in. my repeater is
voice id heavy, i was asked to add more morse code id
in the mix by my friend. after this suggestion,
i made a few rotating bulletins with morse code followed
by a voice counterpart to assist a tech ham in getting some
copy practice right from my repeater. it appears to have
helped alot. upgrade in sight =]

  Actually Mr. Young, I'm opposed to internationally mandated code testing.  Just
go look up that
  statement that the FCC made that says the treaty does not specify what speed you
need to learn
  the code at. You need to know the code, but not the speed at which it is sent. I
gathered
this           information from http://www.arrl.org/news/restructuring/98-143/
nprm.html.

Actually, Mr. Wookie, I'm opposed to reading your oppositions to Morse code
testing in the DX newsgroup and a half dozen other unrealated newsgroups.
If you can't respect Usenet's structure, don't expect everybody else to respect
your opinions......

REC.RADIO.AMATEUR.POLICY was created specifically for your oppositions.
Go use it.

Yes!!!

Nuclear X-rays and Prompt Gamma pulses create a very broadband Electromagnetic Pulse (EMP) that easily exceeds 50,000 volts per meter (50,000 times 80meters/2 (half wave) equals 4,000,000 million volts across your 80 meter dipole). By the way, that is 42 billion watts in 377 ohm atmosphere across your antenna!!!!

During the 50's when Above Ground Nuclear testing was being performed, the STARFISH event, 700 miles from Hawaii, turned off the power grid in Hawaii. That was in the days of Vacuum Tubes...what happens today in the solid state world?

Extensive studies and tests have been performed in this area...nuclear weapons x-ray and gamma radiation will kill your radio and most everything else.

the 75 meter band already sounds like that, and thanks to "k4zdh it has
cleaned up a little, but the 2 meter band also sounds like that because
of all the truckers on there.

C.B. Radio used to be the old 11 Meter Ham band in the Shortwave portion
of the Radio band but during the 60's this changed.

Ther is now a new sort of like C.B. band in the 467 Megacycle range.

It is called (F)amily (R)adio (S)ervice. This is the band that C.B. Radio originally started out on but do to lack of range was not popular.

C.B. is an Amlitude Modulation Service, with Sideband availabl on better models.

FRS is a Frequency Modulated service with no sideband. Range is usually 2 to 4 miles. Radios are much smaller and I have only seen handhelds, no bases or moblies.

Thanks for reading. I hope someone can help us. My brother recently bought a Yaesu FT-1000MP HF rig and he's having a problem trying to calibrate the VFO display so that it's on the right frequency. If I set my VFO to 28.41500 he has to set his to 28.41505 for us to be on frequency with each other. I checked the tone on 10.000mhz and it matches there but can't seem to get it on freq on phone. Any help or suggestions would be greatly appreciated. Please email keith@toolcity.net if you have any comments or suggestions.

73 and good DX,
Keith Reynolds - n3uux

It's not the radiation directly, it's the effect of the radiation on the ionosphere that disrupts communications. As I recall, HF "skip" propagation is gonzo for many hours after a nuclear blast, but the effect should clear up in 24 hours or so and you can go back to DXing... if you still have a power source.

I don't recall any references offhand but if you really wanted references instead of just confirmation that the effect exists, e-mail me and I will see if I can find some.

Wow!  This is really getting surrealistic.  Even most no-coders know how to
send and recognize SOS (That's why they could use it in the show
"believably".  LA cops AFAIK, don't receive Morse training). Besides that,
(a) it was a stupid plot device, (b) Martin Milner still can't act, and (c)
TV shows are probably not a really great input to base federal communication
policy upon.

I have an old 8ch Midland 70-336A VHF radio. I was wondering if there was
anyway to program the EPROM with a regular EPROM burner??? Can anyone tell
me a way to get this radio programmed. I bought it from a guy not in my
area so the repeaters in my area are not programmed into the radio. Any
help would be appreciated. Thanks. 73's

Hi.
I have two (2) Realistic brand (Radio Shack) HTX-404 UHF FM handheld transceivers.

440 MHz (70cm) amateur UHF FM transceiver.

Asking $125 / best offer each.

I have many more items for sale/trade at:
http://www.plasm.com/~seguin/ForSale.html

Thanks.

I picked up a TEK RM-45A 33MHz dual trace scope at a surplus supplier that appears to work. I have a trace, calibrator signal, and get and wiggle traces attaching my RF generator leads to the scope input and varying the signal frrequency and level. I have a manual copy on order, and need a pair of 33MHz or greater probes to get started calibrating, setting up, and using the old TEK.

This is my first scope, though I have been working on tube gear without a scope for several years, and would basically like to use this scope to learn scope fundamentals, improve and speed up my homebrewing and repair (almost all tube based work at low HF), and just to play. So I won't need the best probes at first, and I would like to see how homebrew probes compare with commercial ones.

I need info: parts & materials list, construction method and caveats, schematic, and possibly drawings, on how to do this. Sources? Advice? Comments? Thanks much.

This message comes at a very opportune time for me, as I have been bitten by the HAM bug as well. I live in FL (so I don't forsee large landmasses being a problem with my radio transmissions), and I was wondering just what type of equipment would be best to purchase (I'm going for certification in the end of June and I'd really like to have a unit here for when I recieve my FCC license (I can hardly wait), however while browsing through the back of the latest QST mag I saw so many units with so many different features that I don't know what I should be looking for. I understand that my Technician license will not allow me to utilize all of the amateur bands, but I would like to get a radio (preferably not a handheld) that won't limit me too much in my beginning operations (IE- I don't really want a very low-powered unit, and I'd like to use 2m and possibly 440mhz [as well as whatever I might need to do packet data between two computers]). Anyone have any recommendations? (I'd really like to keep it near $700 or below, since I don't want to waste a huge chunk on equipment I'll replace in a few months as I upgrade classes.

Thanks for any insight/help in advance.

-Robert Gash

Hi folks :) I'm an electronic musician *seriously* looking for the following
musical equipment, in any condition, even broken:

```
-OLD SYNTHESIZERS                  (from the 60's-80's)
-OLD KEYBOARDS                     (w/ knobs or sliders)
-OLD DRUM MACHINES
-OLD SEQUENCERs                    (w/ knobs for each step)
-OLD VOCODERs                      ("robot-voice" sound)
-MODULAR PATCHABLE SYNTHESIZERs
-RACK SYNTHS
-INTERESTING EFFECTS and anything related to the above.
```

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML,
Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion,
Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Oberheim Xpander
-ARP 2600
-Korg MS-20/50
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack
-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer
-Pearl SY-1 Syncussion

For a better idea, please visit
http://members.aol.com/rolandman1/index2.html

If you have any of the above OR SIMILAR for sale or know someone who might,
please email me at rolandman1@aol.com and include phone number as well if
you'd like.

Thanks in advance and apologies if this post annoys anyone.

I am interested in the article about a 2 mt. receiver published on QST
Arrl magazine February
1999 issue.

Has anybody built and tested such receiver?
Can anybody be so kind to let me know how to get the issue or someway
the photocopies of the article?

Thanks in advance

You have a signature like the one below and then you say I should take my "dum
witted" (your
spelling) insults somewhere else? Kinda like the pot calling the kettel black
ain't it?

And any how since the Blitzkreg of 1939 it's German cause the NAZI's stole it like
everything
else Hitler could get his hands on!! And possession is 9/10 of the law!!

Looking for at least a B model or better (second from last digit in model # on back of radio). Would prefer with keypad model, but clean model may be acceptable. Will either pay with cash or trade.

Walt,

Thanks for your well-intentioned suggestion but my computer
is already clogged up with many megabytes of so-called
'convenience' programs which have brought with them more
problems than solutions.

They are at loggerheads amongst themselves, squabble
frequently and can be forced apart only by hitting the
re-set button.

Bill Gates should have been obliged to de-bug the bloody
lot before being allowed to go to bed on his wedding night.

The newsreader bundled with Wordperfect and Netscape v. 4 in the
several-hundred-dollar Corel Suite 8 doesn't qualify as a "proper"
newsreader by your standard. (I purchased Agent but found it to be too
complex for my simple needs so don't use it.)

Communication of all kinds, including postings on the web, would be
much more effective if written for the convenience and understanding
of the reader rather than the convenience and ego of the writer.

Max, you can get a photocopy of any article for $3 ($5 for nonmembers)
for each article requested. Contact the ARRL Technical Secretary
(reprints@arrl.org, 1-860-594-0278) if you wish to get photocopies.

We just took delivery of a 1999 4 DR. Yukon and I can't find anywhere
to hang a mobile under the dash. I had a '94 Sierra truck and two mono-
band mobile's fit not problem. Has anyone found a good place to
mount/hang a "normal" sized mobile rig with the newer GM dashboard
design? Any tips would be greatly appreciated.

A quick tip:

A local ham store tipped me off to a good antenna mounting location.
Using a flattened luggage-mount from Comet remove the rear tail-light
and fasten the bracket to the body panel facing the front of the truck.
The bracket sticks out 90 Deg. to the rear quarter-panel. It worked
like a champ!

Actually, the "competency" line is just a smoke screen.

In actuality, CW is a high-tech form of HAZING - a painful rite of initiation. The reason they don't do away with it is because current "Ham clique" members figure "hey, *I* had to do it, so I'm gonna make the newbies go though it, too!" Accroding to the TV news show I saw, this is the main reason why hazing still exists in the military, even though officially it is aginst regulations.

From the looks of it, coders are the twits as they apparently have no =
life, meaning

that it's more of a twit holding pen.

There are many web sites that list radio modes. A simple search should
give you a number of hits. Also try the Icom site. I think they post
modes for their radios.

And it does seem true that some of the people posting on the newsgroup

are indeed having a lot more fun than the people reading their
postings.

Nonsense. Until the ITU removes the requirement, it stays.
Individual administrations cannot remove it unilaterally.

You are correct, but it's still a lie. All the ITU says is that the operator
has to show knowledge of CW. It doesn't say what speed. It doesn't
say how. It doesn't say different classes.

Technically, "a dash is three times as long as a dot" would be enough
to satisfy the ITU requirement.

The first step is the elimination of the different speeds of CW. That's
going to happen, whether the CW freaks howl or not. So ask yourself,
what happens to the CW subbands when the requirement becomes a
single speed? Think they'll stay the same? Maybe, for a short while.
But I'll bet they 'shrink' a little. Then more, then more.

All this CW / anti-CW argument is doing is fostering an us vs. them
attitude, and the result is that when the CW requirements lighten up,
then fade away, so will the subbands. And without a subband to
protect it, new operators will fall off.

There will always be diehard CW freaks. There are a number of areas
where CW is the only way to go. (And no, I'm not going to use that really
lame and BS argument of 'what if someone is in an accident and their
mic is broken?' line. Hey, if frogs had wings, they wouldn't bang their
ass on the ground when they hop either!) But without the 'fun' areas for
CW, it will begin a downward slide.

What's the answer? I sure don't know. But I DO feel that the surest
way to accelerate the slide is to bicker and post BS arguments on CW
being 'required' with implications that don't match facts. Or to state it is
a 'twit filter'. Or that it's required for those times you car runs off the road
and you only have CW to get through.

Mike

the tests?

Yeah, then the next thing that would happen is that the HAM bands would
become a CB wasteland. Most CB'rs know enough to pass the tests, and when
they do...The bands will be just like another CB band.

Tom

I am one of the people that enjoy working cw. However, I have to agree that it is an outdated mode of communication. The military does not even use the mode any longer.

The way I see it, either get rid of the requirement or limit the highest speed to around 10 wpm. Then make the written more technical. Get into circuit design. Don't just tell us what a diode does. Have the test reflect why it is in the circuit. I'm not saying have someone design a radio. After all, why would we build a radio when we can go down and buy an ADI rig for $150. But we do need to understand, for instance, why an antenna for one band is a particular length. Or what a compressor is used for in a SSB radio AND how to use it correctly. Or how about how to select the proper feedline for your antenna and why? These are things that are touched on but the test material does not really go into depth into why things are done the way that they are.

If people think that cw is a way to keep out the yahoo's, go down to 80 meters and listen around. It didn't work. I doubt that anything that the FCC would do to change the testing will keep poor operators off of the air. But if we are going to drop the cw requirement, we need to add something to the written portion of the test to take it's place. Perhaps even a higher percent pass requirement? 95%? Just a thought.

I say replace cw with a requirement that the person know some form of
digital communication in some detail. cw is just another form of
digital comm, just slower than some others.

I just thought of something that might get the coders to advance into =
the "modern" age.
We can give them some Commadore VIC20's and a 300baud modem to transmit =
over radio.
It will be just as effective as morse code but more modern and more =
useful. ;)

Organization: SM0VPO
Newsgroups:
alt.alcohol,alt.radio.pirate,aus.radio.amateur.digital,aus.radio.amateur.misc,es.rec.radio.amateur,nl.radio.amateur,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

Hi again all,

I have waddled over to the HTML newsgroups and found the users there very helpfull. As a result I have managed to add the promissed radio formulas calculator (under BASIC INFORMATION) at:

http://sm0vpo.8m.com/	Main page
http://www.geocities.com/SiliconValley/3569/	Mirror in the USA
http://hem2.passagen.se/sm0vpo	Mirror in Europe
http://members.xoom.com/sm0vpo	Mirror in Far-East

So-far I have added calculators for:

Resistors in series /Caps in parallel (bit of a joke here?)
Resistors in parallel / Caps in series
Reactance of Capacitors

Reactance of Inductors
Calculating basic frequency - LC known
Calculating the number of turns on a coil - single layer
Calculating the number of turns on a coil - multi-layer
Evaluating a heatsink (what does this HS in my hand do?)
Calculating heatsinks (how big do I want to have it?)

Soon, I will be adding T/Pi resistive attenuators and VSWR calculators.
I will also be adding calculations involving sugar/SG and potential alcohol
content plus boiling point as a measure of alcoholic content.

Best regards from Harry - SM0VPO
=====================
PS
Windows is not the answer - it is the question.
The answer is NO!

Does anyboy know the mods for the FT-3000M? I have trawlwd the internet,
with no luck, and the only mod I could find, said to cut a certain wire, but
I could not locate this wire in the radio I have.

Regards,
Tony Corbett

Walt,

Havn't you heard yet ?   That minor skirmish known as the
American War of Independence is over. Both sides won. Its
now considered very respectable to be polite to visitors
from two hops away across the pond. ;o)

Reg.

how new is your 3000? if you purchased it within the last 2 years or so then
now mods are available. They were demand Restricted by the FCC to not be
modifiable.. Of course you can call Yaesu and ask them about it.. I have talked
to there techs now and then.

Actually, remember that the interference from the aliens was getting worse and worse and I suppose they were trying to say that it was so bad that only CW could get through.

No, not replace it, just don't RELY on it. You're right, CW is just
another form
of communication. Why should that one form carry more weight than all
others? Offer a technical test and a CHOICE of practical test, one of
which
being CW.

That's right. Don't get the idea that I support morse as a
qualification for HF access, but that treaty obligation
remains until 2003, which is the earliest date at which
it can be discussed.

In the meantime a compromise speed of 5WPM has been reached
which should ease the pain somewhat until 2003.

As you say 'a knowledge of morse' - the ability to write
down the dot and dashes for A-Z and 0-9 would probably
satisfy that requirement!

That is what is being done here. The speed has been set
at 5 WPM, and details of what should be included in a
technical exam to replace morse is under discussion.

The FCC will probably do much the same thing soon.

A gentleman at Electra faxed me a spec sheet and instruction page for the TSA.

In part:

On/off control: Manual push-button

Volume control: Manual push-button. Push and hold to set desired level (in 64 steps). Toggles between volume up and volume down

Channel selection: Manual push button. CH button cyclically selects Weather, Channel One, Channel Two, and Scan Ch 1 & 2.

Audio: up to 1/2 watt thru 32 ohm speaker, or 8 ohm ext spkr jack

Warranty: 1 year parts & labor

Programming: Press/release CHAN button to get to desired channel.

And (paraphrasing it): Press CHAN button number of times to correspond to

freq digits.
E.g. : For 154.205, press it ONCE for 1, then FIVE TIMES for 5, FOUR TIMES for 4, TWICE for 2...etc.

NiCD batt/charger and Carry case are $19.95 each.

The fellow told me they sold out the entire stock at Dayton, but have all parts in stock and will be assembling more radios this week.

Harry
If anyone wants more spec info, email me...(I DON'T have a unit yet...anyone out there get one?)

Yeah. I found this really interesting. But what has all this got to do
with Soc Penpals? I don't really care anything about radio
communications of any sort. So why not just keep this on the boards that
apply and take it off soc.penpals. As far as I am concerned amateur
radio is atrocious, even worse than CB used to be here. I have never
heard of so much crap on any wavebands before. How these people get
operating licenses is beyond me.

Yeah, but rec.radio.amateur.dx is still listed.
Wern't we supposed to take this off the listings?

Yeah. Can yo'all remove the crosspostings to Soc.Penpals as well please.
All this radio crap is upsetting my digestion!

Morse Code is a "turd in a punch bowl". It is the reason that ham radio
will die. It is really unfortunate.

Well naturally I read the subject matter and thought here is an item
about Inspector Morse. No doubt you have heard of Inspector Morse?

I don't see any groups listed where the Morse Code issue would not be
appropriate.

All but two are amateur radio related, and shortwave and scanner
listeners have to listen to (or try to avoid) Morse Code too.

> Yeah. I found this really interesting. But what has all this got to do with Soc Penpals? I don't really care anything about radio communications of any sort. So why not just keep this on the boards that apply and take it off soc.penpals.

Let me try to explain. When people reply to a post on a newsgroup, they don't usually read what newsgroups are all listed and delete the ones they THINK are not appropriate. They just hit send, and it goes to all the newsgroups the original post was on. Blaming the person who replied to the post is silly, he did not choose the newsgroups listed.

And to delete any of the groups would be just as silly, because you are sending a reply to the post and don't know which of the groups he will be checking back to read your reply, so it makes sense to leave everything as is.

Why do people hate logic and common sense so much?

Two of my friends are pilots and say this is a bunch of bullshit.
Neither of them had to learn morse code to get their pilot's license and
don't know of anything used in flying their planes that would need to
recieve morse code for any reason.
